Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Malcolm Swift

Yours sincerely,

605 Hourigan Creek Rd, Raglan QLD 4697, Australia

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Ben Kerr

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Simone Young

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Kath Jihnson

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Mark Ruge

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Peter Kennedy

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Andrew Deans

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Kaye Bonato

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Heather Oakley

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Felicity Dixon

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Chris Martin

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Benn Reedman

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Peter Gringinger

N5W should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Susan Blackburn

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Karen Gloury

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Johan de Bree

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Melanie Bull

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Kerryelle Bucknell

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project & believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated & will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clearing close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodlands in NSW of which are home to unique wildlife.

3. Drilling through a recharge aquifer of the Great Artesian Basin & draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate & emissions of methane from venting & leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural & social life of the Gamilaraay people.

The project is not justified: Santos' own CSG export activities in Queensland have caused gas prices to rise & supply to become unpredictable.

NSW should respond to this by investing in more reliable & ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social & economic harm.

It will cause economic upheaval in Narrabri & put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal Seam Gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of CSG now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project & make the Great Artesian Basin recharge off-limits to gas mining.

I look forward to hearing of your considered response in the hope for a positive outcome.

Kind regards,

Steve Barton

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Sdat Mazlumoglu

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Rhonda Wood

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Len Botterill

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Erica Neate

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting 5antos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Paul Buckby

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Michael Oldfield

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Alan Outhred

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Michael Moran

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Gary Brooker

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

N5W should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding 5pring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor 5antos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Aenid Pettingill

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected. It is madness to risk one of the richest agricultural areas in the world by contaminating or reducing the artesian water supply. Mine the desert or useless land but not this area.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Gary McGlynn

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Anna Ludowici

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Annemarie Hopcroft

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Elizabeth Whitton

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Kathleen Walker

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Alan Wilson

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Sharon Wallent

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Vickii Walker

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This is a submission to the Narrabri Gas Project EIS.

Dear Sir,

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Yours sincerely,

Linda Anchell

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Diane Donohue

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Ben Lee

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Elizabeth Read

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Peter Hunt

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Cristina Economides

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Jane Armytage

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New 5outh Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western N5W.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Mal Anderson

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Susan Perrow

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Lesley Sims

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Suzette Osborne

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Linden Berry

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Maria Rankin

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Renee Wardlaw

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed, Lisa Rothery

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

jane doherty

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Janet Baljeu

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Ruth Taylor

Please reject the Narrabri Gas Project as this type of activity will ultimately have devastating effects on our overall ground water systems

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Rod Sproule

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

vadimbatura@gmaill.com vadim

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Emmie Sloof

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Dallas Gill

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

lacey laughlin

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Keitha Bodenham

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Anthony D'Ambra

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Phoebe Clift

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.

I urge the Government to reject this project and make the Great Artesian Basin recharge off-limits to gas mining.

Signed,

Yours sincerely,

Di Johnstone

Please reject the Narrabri Gas Project

Attn: Executive Director, Resource Assessments

Department of Planning and Environment

GPO Box 39

Sydney NSW 2001

This is a submission to the Narrabri Gas Project EIS.

I object to this project and believe it should be rejected.

This project, if approved, would:

1. Extract over 35 billion litres of salt laden groundwater, much of it in the first five years. This water will be treated and will generate almost 500,000 tonnes of salt waste, for which there is no safe disposal plan.

2. Clear close to 1,000 hectares of the Pilliga Forest, fragmenting the largest temperate woodland in New South Wales, home to unique wildlife.

3. Drill through a recharge aquifer of the Great Artesian Basin and draw water down from a water resource relied upon by rural communities across western NSW.

4. Lead to large deliberate and emissions of methane from venting and leakage, adding to climate change.

The project will also cause more trauma to the regional Aboriginal community because the area of impact is crucially important to the spiritual, cultural and social life of Gamilaraay people.

The project is not justified: Santos' own coal seam gas export activities in Queensland have caused gas prices to rise and supply to become unpredictable.

NSW should respond to this by investing in more reliable and ultimately cheaper renewable energy, not by letting Santos inflict more environmental, social and economic harm.

It will cause economic upheaval in Narrabri and put agricultural industries at risk, as well as causing light pollution that will ruin the dark night sky needed by the internationally renowned Siding Spring Observatory.

Coal seam gas is harmful to health. Neither the NSW Government nor Santos have investigated or dealt with the serious health effects of coal seam gas now appearing in peer-reviewed research in the United States.
