---

Hi,

Thanks for your letter (DOC25/851314) dated the 3 October in regards to the minor modification for the landfill.

Please see response to the 3 key issues:

- The Landfill Closure plan will be underway later this year. We have appointed a consultant who is currently completing the detailed capping design and filling plan. The landfill still has approximately 5-6 years left.
- Apologies on the confusion in the table. This was a second version where I removed a condition request but failed to edit the table. There is no environmental impact from the modification as they are all administrative to enable us to be compliant and updated with legislation.
- The capping will be staged due to the shape and different height of the landfill cell. EPA have reviewed the concept already.

Thanks for your queries and I hope this clears up your concerns.

Cheers,  
Belinda
