Dear Sally

DA 401-11-2002-I) – NOTIFICATION OF COMMENCEMENT OF SWDF POPT UPTO 60%

As per condition 1.4 AB Boral must limit the combined annual usage of solid waste derived fuels (SWDF) to no more than 50% by total fuel mass until appropriate proof of performance trials (PoPTs) are undertaken to the satisfaction of the EPA and the planning secretary for each 10% incremental increase in SDWF usage above 50%. Also, Boral must not Co fire nonstandard fuels permitted by condition 1.4 A unless compliance with the air emissions on the EPL has been demonstrated for that combination of fuel types through a PoPT to the satisfaction of the EPA.

Boral notified the EPA last week of our intention to undertake a POPT at Berrima commencing in mid-March 2025 pending kiln availability. This letter is to inform the DPHI of our intention to start a PoPT to assess the performance of the kiln running at up to 60% SWDF while Co firing with AKF5 (Tyre chips). As provided to the EPA, the trial will run with a combined wood waste/RDF blend at a ratio of 50:50. This ratio reflects our current supply agreement volumes and will be typical of our operations as we head to 60% SWDF by total fuel mass.

Once the PoPT is completed, we will provide a report to both the EPA and the DPHI. If you have any questions about the trial, please do not hesitate to contact me on 04018934204.

Yours sincerely,

Greg Johnson
Senior Environmental Business Partner NSW/ACT
