

HYDROGEN CHLORIDE

Inhalation of the fumes can cause coughing, choking and inflammation of the nose, throat and upper respiratory tract, and in severe cases, pulmonary oedema, circulatory system failure, and death.

CARBON MONOXIDE

Carbon monoxide is an atmospheric pollutant in urban areas. The most common symptoms of carbon monoxide poisoning are: headache, nausea, vomiting, dizziness, fatigue, and a feeling of weakness.

SULPHUR DIOXIDE

Sulphur dioxide is a major air pollutant and has significant impacts upon human health. The concentration of sulphur dioxide in the atmosphere can influence the habitat suitability of plant communities, as well as animal life.

NITROGEN DIOXIDE

Chronic exposure to Nitrogen Dioxide can cause respiratory effects including airway inflammation in healthy people and increased respiratory symptoms in people with asthma.
