Subject: AIRSERVICES RESPONSE (WS-MI-004 P3) Amended EIS - Eastern Creek Energy from Waste Facility (SSD 6236) [SEC=UNCLASSIFIED]

Hi Sally,

I refer to your request for Airservices assessment of the plume rise associated with the Eastern Creek Energy from Waste Facility.

Airspace Procedures

With respect to procedures designed by Airservices in accordance with ICAO PANS-OPS and Document 9905, at maximum given heights of 326m (1070ft) AHD (0.1% exceedance value) or 365m (1198ft) AHD (maximum plume height), the exhaust stack and associated plume rise will not affect any sector or circling altitude, nor any instrument approach or departure procedure at Sydney, Bankstown, Camden, Westmead Hospital and Richmond Airports.

Note 1: Procedures not designed by Airservices at Sydney, Bankstown, Camden, Westmead Hospital and Richmond Airports were not considered in this assessment

Note 2: A preliminary assessment was conducted against proposed future approach and departure procedures at Western Sydney Airport. Initial indications are that this development will not have a negative impact on these procedures, however this cannot be guaranteed at this point in time.

CNS Facilities

This proposal to 165m AHD with a plume rise extending up to 365m AHD at the provided location will not adversely impact the performance of any Airservices Precision/Non-Precision Nav Aids, Anemometers, HF/VHF/UHF Comms, A-SMGCS, Radar, PRM, ADS-B, WAM or Satellite/Links.

Regards,

Tony Aiezza
