One problem that seems to be overlooked by the proponents is the matter of flooding. The Georges River is one of the worst flood area in NSW and this was showed recently when the M5 and Moorebank ave was the only safe intersections many roads were closed and a number of other roads were in danger of being closed. There is no way all traffic could be put through one intersection and with the road network being 53% over capacity by 2030 it shows the folly of what they are trying to achieve. Our problems have been ignored from day one

I have done enormous research into pollution and know that next to these type of projects the cancer risk is 1000 in a million and doesn't decrease noticeable until one mile from the project. There are many residents live inside this area and nobody can justify exposing these residents to this type of exposure especially our children whose bodies don't mature properly until they are 25 years old. I have been also known that in Port Botany noise spreads for 3km and with casula on top of the project and wattle grove below this is a massive risk to residents and any mitigation in warehouses will not prevent the risk by diesel locomotives and trucks and vans which is a unacceptable risk. Also I know there is a huge number of koalas in the area with other endangered and threatened species and they couldn't survive what is planned. The environment on the Georges river parks and environmental areas will be greatly impacted
