

Western Harbour Tunnel and Warringah Freeway Upgrade - SSI-8863

Attention: Director, Transport Assessments, Planning & Assessment, Dept. of Planning
Industry & Environment

I oppose the Western Harbour Tunnel due to the impact on the local area by increasing pollution including noise, air, water disturbance of toxins in the harbour and vibration. There will be major disruption to the physical and built environment from the tunnelling and the tunnel as evidenced by other tunnelling experiences with West Connex.

The negative consequences are major with unlikely positive benefit that matches.

In addition to these local impacts, there is a major financial cost impact to the state. This money could be better spent to support public transport improvements.
