ONLY MAKING A COMMENT

without any such political  
donation disclosure ever, I elect  
my right to comment publically  
(in the public domain) that the  
EPBC Act, bilateral agreements  
require a third way. My comment  
is to acknowledge how environment  
enhancements in the community  
continue to be omitted from  
significant development applications.

Unless the Department in the context of Covid declines to integrate significant steps at regeneration, the EPBC Act and recent Media coverage that details facts and data on its ineffectual use as a tool of legislation to conservation and biodiversity (and also Biosecurity vis-a-vis COVID) then any post ETS bartering of credit systems is not acceptable in line with public domain accountability. Will the Department continue to rely on these 2 options? On what basis?
