---

Thanks Brittany,

Apologies again for the slow response.

Council has no fundamental objection to MOD5. Although processing rates and onsite refining has increased, it is claimed that the transportation thresholds will not be breached. This also extends to potential water truck movements.

We also expect that the existing conditions pertaining to rehabilitation and restoration, post mining activities will extend to this dam.

I note that it is anticipated that a further modification will be sought to extend the life of the mine. We expect that this will be the trigger that will enact off site impacts such as roads and transport and can address that at the relevant stage.

Kind regards

**Graeme Harlor**
