I **object** to Tilt - Liverpool Range Wind farm submission - Mod 1 Turbine and infrastructure changes

Comments:

In 1946 the State Government in their wisdom made the Warring State Forest a National Park. Despite the promise of Rangers and other staff the Labour Government took from Coalah the one thing which was a constant employer and brought outside money into the district. We have not seen hide nor hair of those politicians again with the

last closure seemingly permanent. Now the Governments - both State and Federal think that the people who did not come to the park in droves may prefer to see massive wind towers just to set off the 500 year old trees

While on the subject of trees - one article in "The Australian" recently quoted 70 million trees being cut down in Scotland to make way for wind farms. Next day a pro-wind farm reader wrote that these had been replaced by 272 million trees planted. However it did not say what sort of trees they were - My guess is that they would be Radiata pine or some such - quick growing and for one purpose - Timber so that the over seas companies can make another quick at our expense. Living on the Black Stump Way I see about 10 large loads of logs a day go past on roads not made for such traffic and without a mill they will not provide employment for Coolah -

Cassilis

2.

My advice to whoever is the beneficiary of this wind farm is to build your Wind Farm closer to where the power will be used i.e. The coastal regions or go out and buy the land you are going to lugger up so that people who live in the area can move out with dignity

P.S. I don't like your chances of buying any land
