I have not made any reportable political donations in the last two years.

I acknowledge and accept the Department's disclaimer and declaration.

I would like to lodge my "Objection" to this project. The potential harmful chemicals released into the atmosphere as a bi-product to the incenerator process and residual left overs that will be buried in the ground is not acceptable. My main concerns is how the contaminations enter the atmosphere, will travel wherever the wind blows. This contamination will end up on land the land where animals graze, in our dams, streams and drinking water. As a rural land owner the air, land and water are vital to a healthy existence.

Kind regards
