

I would like to object to Woodlawn ARC:SSD-21184278. This proposed incinerator that Veolia would like to build is unnecessary, and will be toxic to people, animals, and plants. It is definitely not a renewable energy project (it is sourced from unrenovable and unsustainable products and resources). Approval of this project can only show that the NSW Government does not take it's own commitment of Net Zero by 2030 seriously as this project will emit 140,000 tonnes of CO2 per year. It will also impact on the economic of this region, through polluting the agricultural land surrounding, and forcing people to move elsewhere from nearby. It very clearly has no social licence in this area. At the end of 2022, how can such a backward looking proposal even be up for consideration?
