Secretary to Bungonia Park Land Manager

To Director -Industry Assessments Development Assessment

Department of Planning and Environment Locked Bag 5022 Parramatta.
NSW 2124

Dear Sir/Madam:-IN REFERENCE to

Woodlawn Advanced Energy Recovery Centre

SSD-21184278

I object to the **Woodlawn Advanced Energy Recovery Centre** proposal .

In 1980 Windellema was discovered as the location of the World's rarest Eucalypt , *Eucalyptus Recurva* ; Also known as the Mongarlowe Mallee,there are only 5 plants in the world. The largest is in Windellema. They are remnants of ICE AGE vegetation;

The Windellema plant is 13,000 years old. It is the oldest living plant in the World.

There are only 5 known:- 3 in Braidwood and 2 in Windellema .They are not able to be propagated yet. BOTH of these rare stands are in the range of the plume of the Toxic waste ;permanent poisons in the soils from fallout ; These are the last in the World; The predictive range is in the Bungonia, Windellema area.

Eucalyptus Recurva is also at the Highest level of protection under Government legislation.

Scientific name: *Eucalyptus recurva*

Conservation status in NSW: **Critically Endangered**

Commonwealth status: **Critically Endangered** 

Gazetted date: 31 Jul 2009

Profile last updated: 21 Sep 2021

The plume will carry the long term disastrous pollutants to kill these rarest treasures. A World disaster.

As Park Land Managers, we are charged with looking after the Bungonia Crown Lands 35559 comprising 15 Hectares of mixed grassland remnant endangered Yellow Box Gum Woodland and Bio-diversity NSW Hot spot as well as two creek zones Bungonia Creek and Woodward's Creek which both flow through the Bungonia Village parklands. These key creeks are in the Sydney Water Catchment; their catchment is widespread throughout the District and flowing from past Tarago through Windellema for miles and miles.

We don't want the contaminants; furans; PBC's and other Heavy metals and toxic wastes contaminating the catchment of the creeks we manage .

We have in Bungonia the Bungonia National Park one of the major iconic natural parks in Australia . The Shoalhaven Gorge is the water course fed by the Bungonia Creek and into the Sydney water supply ; This whole catchment area needs to remain pristine for the safety of the water supply .

The Veolia waste management incinerator is a disaster for the environment .

I have not made any political donations

I acknowledge and accept the Department's disclaimer and declaration.
