I am a Farmer.

I have made no reportable political donations in the last 2 years.

I oppose and object to this proposal.

My reasons for objecting:

1. If there is no issue regarding toxic emissions, then this proposal should be placed in Sydney and there would be a massive saving because 380,000 tonnes would not be transported to Tarago.
2. This process has a fancy name, however it is a volume reduction exercise as the amount of energy produced is relatively minor for the cost of the facility.
3. If there is insufficient capacity of the current transmission network, then farming land will be at risk of additional transmission towers being built.
4. My property is some 20 or so kilometers North/North East of the incinerator and is therefore at risk of being contaminated.
5. Veolia has a poor record re the management of the current site with many instances of breaches.

I acknowledge and accept the Department's disclaimer and declaration.
