

To the NSW planning authority,

I am writing to you as President of the Canberra District Winery Association to express the Canberra District's opposition to the proposed Tarago Incinerator at Veolia's waste disposal site.

There is sound evidence that the fumes from the site will affect grape quality and that the incinerator is close enough for its fumes to reach Canberra District vineyards.

Attached is the evidence drawn together by the AWRI to support this assertion.

Please feel free to contact me further if needed but this is a proposal that will damage our industry and cause loss of livelihoods for those who have worked for decades to build up successful businesses in NSW and the ACT.

This not only applies to the vineyards themselves but local tourism visitation and those business that supply to the region's wineries.

Sincerely

Fergus
