
Hello, I am a frequent visitor to Walcha from Canada as my father used to reside there and my stepmother still does. I cannot stress strongly enough how much I support the application to have a wind farm in Walcha. (Application number SSD-10471).

There is no doubt that renewable energy is what is required for the future. In fact, we need it now because we are experiencing the effects globally of the climate crisis due to emissions, up to and including Canada and Walcha! We cannot give in to the oil industry who will never relinquish their power and their trillions of dollars. Moreover, this will provide employment to the people of Walcha and vicinity, which in turn will strengthen the economy.

As clergy in the United Church of Canada, sister church to the Uniting Church in Australia, I feel strongly about the stewardship of creation. I hope with all my heart that this wind project comes to fruition.
peace be with you
