

I support Winterbourne Wind Farm. Application No SSD-10471.

Dear Sir,

I support the Winterbourne Wind Farm because of the following reasons:-

I think Australia is going to have a huge energy crisis as it fazes out coal for renewables. The coal fired power stations are being decommissioned at an alarming rate with nothing to replace them. This Winterbourne Wind Farm is past the planning stage and should be given the go ahead so that it is up and running by the time the coal power stations are closed down. Nuclear, Coal and Hydro Power aren't an option with the present government and new Hydrogen options aren't invented yet so what choices do we have to achieve the net zero emissions target set in place, but wind and solar?

I also think that Winterbourne Wind Farm site is far enough away from Walcha itself not to impact on too many people. The objections to the Farm are mainly its impact visually as well as noise – the benefits to the community in growth of its economy, employment and hopefully keeping the price of electricity affordable locally are enormous?

As a former member of Walcha community myself and with family still living in the District, I would really like to see Walcha thrive and go ahead and with the Winterbourne Wind Farm this might just happen?

Yours sincerely,

Anne Murray
