

I strongly support the Winterbourne Wind Development for the following reasons:

- NSW needs power when the coal stations close down.
- It allows farmers to have a passive income in times of drought, floods and storms.
- It helps with succession planning.
- It will create jobs locally, employees will spend money in the local community and the community fund will help so many organisations in the Walcha township.

What a fantastic opportunity for the town of Walcha to have a large scale development as the Winterbourne wind project. I don't think they will realise how beneficial this will be until after the development is complete.
