

To whom it may concern,

I wish to add my support to the Winterbourne Wind Project, it is very important that we as Australians support the project.

The ill effects of Wind Farms is very minor, some think them unsightly, however I think those who do not like the look of them should take a train trip to Sydney and view the Coal Mines in the Hunter Valley up close. Not are they very unsightly, the dust and pollution they emit into our beautiful country, is very detrimental to our environment. The scars on the landscape are very difficult to rehabilitate. It is imperative we have Wind Farms in Walcha District, so we have an alternate power source, when the Coal Mines are closed down. I do not think anyone would look forward to blackouts at any time, especially in our long cold winters. We cannot live in the 70's forever, so for the sake of young people and the future generations, please approve this project, there will be jobs and money come into Walcha, that will help keep Walcha progressing into the future.
