FW: OBJECTION SUBMISSION to Wallaroo Solar Electricity Generating Works + BESS - SSD-9261283

I object to Wallaroo Solar Electricity Generating Works & Battery Energy Storage System SSD-9261283 for the following reasons:-

*Caring for our healthy soil & water supplies responsibly is essential for our lives.

Good agricultural, pastoral land should not be covered in solar panels for decades to come, as this land is limited & must be prioritised for growing life sustaining food supplies.

*This Solar Works has the potential to contaminate the Solar site & surrounding land & water - the Ginnenderra Creek - flowing to the Murrumbidgee River - especially when the solar panels degrade, if they are damaged by hail storms - which is common in this area, or if they are burnt in a fire event & as they age.

*Solar Electricity Generating Works are an increased fire risk & toxic smoke hazard - which has not even been researched yet by NSW Fire & Rescue.

It therefore, is completely inappropriate to locate this fire hazard in the close proximity of this rural, residential area - where it would pose a serious danger to lives.

*It is very important for the local community, that the liveability of the pretty area is enhanced for all residents & our visual amenity does not include ugly eyesores - such as Wallaroo Solar Electricity Generating Works & filthy lumps of BESS!

*There is nothing about Wallaroo Solar Electricity Generating Works that is helpful or beneficial to the environment, to the local community or to Australia at all. It is actually very damaging, so please do not ruin this area or Australia further with these ugly, contaminating, intrusive, industrialised Solar Electricity Generating Works & Big Toxic Battery burdens.

Yours Sincerely,
