

I object to Central West Orana REZ Transmission

Comments:

I firmly object to this project. This valley has always been water deficient and in the last drought which was ongoing for almost 3 years many groundwater bores ^{and rivers} went completely dry. How can landholders be assured their stock & domestic water needs are guaranteed - in one response they can't!! There is a focus on town water supplies and little to no focus on stock and domestic supplies.

This does not even touch on loss of land value as well. The Cudjah Valley has been tightly held because it is deemed as reasonably 'safe' country. Once water supplies are depleted, the massive structures going through peoples places, the clearing the visual ^{disaster} all will have a knock on effect. Land values will decrease ~~across~~ across the board - not just on the places that have these monstrosities but will affect the entire valley.
