Submission of air quality noise and vibration

Air quality from diesel engines running all day. The smell of diesel on days when locomotives at grain corp is really bad after the reopening of branch line. Cannot be out in yard or open windows as it idles there all day.

Noise & vibration is loud now with house and windows vibrating quite alot.

It is bound to be louder and heavier vibration with double stacked freight trains and more freight train movement and length.

Why isn't this in the case study for Henty rural area.
