

Burrendong Wind Electricity Generating Works – NSW

Development of a wind farm, with up to 70 wind turbines and associated infrastructure - Dubbo Regional, Mid-Western Regional

SSD- 8950984

Applicant:

Ark Energy

I object to this development including the necessity to follow a global agenda in order to achieve it. This is NOT sustainable as you well know and is designed to transfer wealth from Australians to overseas entities. This will contaminate our regional environment building on the “renewa-bull” systems which are already in place.

Renewabull power is exponentially expensive, and hazardous because of the inability of essential emergency services being allowed to attend fires, and that is a very high risk with turbines. The scenic views interrupted by 250m high turbines will contaminate the environment. Fires are a regular feature of turbines, and birds are killed daily all over the globe by turbines. Fire risk is generally divested to the landowner, and emergency services aren't allowed to attend. This pristine area is a relatively toxic-free region and doesn't need toxic fire risk, or toxic smoke travelling for miles and miles on a breath of wind to cause health problems in thousands of people for which these companies will NEVER be liable. If they are, they'll just sell to a friendly company and make themselves scarce and we'll never be able to chase them for damages.

I hold this NSW State government corporation, Ark Energy, and any other subsidiary or parent corporation as well as the Commonwealth of Australia (corporation) liable for any and all of these issues or other issues which may arise, because you have all lied to us about the “efficiency” of solar and wind power generation and are riding roughshod over us all.

Why is this government persisting with the expense of these systems? Why is it OK to put people living regionally at risk of fire, smoke and **HIGHER POWER PRICES**, when for example wind turbines require coal-based power to start, and solar is not a steady supply of power? The whole thing is total madness, pushed by government officialdom who are enticed, paid off, or just too stupid to understand that we are in for blackouts because these systems cannot, in a pink fit, cover for what we had, or what we could build from coal, as China is doing.

Already this last week we are being asked to TURN OFF OR DOWN-REGULATE OUR POWER because the State can't cope. Again, I hold you and State and Federal MPs accountable for this lack of energy supply when we have affordable and clean coal, produced here in Australia, and it is a steady and predictable supply, which should be reinstated, and more built instead of this madness which will never be able to supply our nation's needs.

How stupid will future generations think we were when they look at us having cut off our noses to spite our faces. This is the stupidity of this madness.

We were promised that our power bills would DECREASE not increase, when governments everywhere began dismantling our quite effective power structure, beginning from the old regional **County Council** system we once had.

That was “privatised” and we were told that power prices would be more competitive. **They weren’t, and aren’t!** Then, when it was further privatised, and **unbundled** as per the **global agenda**, POWER PRICES WENT UP EVEN FURTHER. Now, we are seeing the further extension of that agenda, because POWER PRICES HAVE GONE UP AGAIN, and will CONTINUE to do so.

We’re being asked to swallow the lie propagated by the UN and globalist corporations that “renewable” energy is more reliable than base-load clean burning coal. The World Bank and IMF, along with globalist corporate partners have promoted Deregulation, Privatization, Liberalization and Commodification of everything so that they could control it. Consequently, we’ve seen our utilities unbundled and bought up, and politicians have been stupid enough, or compromised with bribes etc, to accept this, when it quite clearly goes against simple common sense.

Renewables are **UNRELIABLE**. The lies propagated are that “Renewable” energy is more reliable than base-load clean burning coal. It is NOT.

By continuing with this lie, you are denying people living in this State, and indeed, Australians, who pay taxes and generate enterprise, the **right to available, constant and affordable power**. You are complicit with politicians in effect murdering elderly people who die of heat and cold exposure because power is not available or affordable. This is a basic human right, and Australia, to its deep shame, no longer supplies this to its people, instead follows the dictates of globalists with another agenda.

You have stolen this right from we, the people; propagated lies, done deals with huge corporate companies, and decommissioned productive land in order to fill with solar panels which don’t work to capacity when it’s too hot or cloudy, or dark. Unsightly wind towers manufactured in China mostly have been, and are being, put on productive land, or now, planned to be just offshore our beautiful coasts.

The stupidity of AGL recently offering a great deal to **EV owners to charge AT NIGHT for as low as \$5 AT NIGHT**. How stupid is this? *“The sun don’t shine at night”*, but we should all charge our highly flammable “slow-to-go-anywhere” EV’s AT NIGHT, for a DISCOUNT!!!!!!!!!!!!!! Have you ever seen anything so stupid?

Turbines and solar set-ups kill or disorient birds; turbines don’t work when it’s too windy, and solar systems don’t work when it’s too hot or not to capacity when cloudy anyhow. Electric vehicles are inefficient, and will take years to become efficient. People want to charge them at night, when solar does not generate. They have proven lethal to emergency services workers being electrocuted when helping at accident scenes. They start fires which are unstoppable. They are dangerous, and it takes days to go where normal cars take hours to go, and the disposal of the batteries and componentry will be a nightmare.

Nothing compares to coal, which is actually much cleaner that you would have us believe with the technology we now have. It is also affordable, and **people need affordable power, RELIABLE base-load power**. We don’t need you stealing assets of people, because this is a basic right we once enjoyed and contributed to. Now, it’s commoditised to the point of “structural adjustment” (another UN term), whereby **small business are going out of business because their power bills are too high**. This is THEFT, and no politician should be complicit in promoting it, and this project should not be allowed to go ahead because it will most certainly cost much more than is projected, and at the end of the day, the consumer will be required to pay for it.

Just this last Winter a hospital in WA was not running it's heating because it was too expensive, and people were cold. That's OK on the altar of stupidity, which apparently is renewable many times over.

Furthermore, HOW MUCH are these corporates being paid for the unreliable, "renewable" power, compared with those who have solar on their roofs feeding into the grid? Please answer me that?

They've been allowed to set up on productive land, or land close to towns where they're close to existing power stations, instead of making them set up on vacant land well away from towns, and having to foot the bill for the lines to the feed-in points. But instead, it's being subsidised to the extreme by those who can least afford it, while these huge corporates receive subsidies.

Worse than that is our reliance on slave labour for the componentry, and on Chinese manufacturing – at a time when top military people are cautioning us about the CCP. However, it's OK to allow the CCP to own a good slab of our energy infrastructure? Again this is madness, and is a **threat to our food and energy security** in itself, therefore, as it follows, our national security. With base-load coal, we pay Australians to work in coal-mines and power-plants, we do not need to **rely on child/slave labour**, which is apparently OK by the UN/global Gobbleopoly. With base-load coal, we do not threaten our small business / manufacturing / farming / entrepreneurial sectors, nor have to shut down heating or air-conditioning in hospitals.

Remember, Warren Buffet said that "renewables" were not worth investing in – **UNLESS they were subsidised**. So, who are we fooling?

Blind Freddy can see that it would be better, if we want to follow the wind/solar route, to put solar panels on existing roofs, and just pay the people. However, the **goal is more about control, and stealing from the Australian people**. Also, we now know that coal is actually a RENEWABLE resource.

Furthermore, bludgeoning a protected species, Koalas, to death is only allowed by these internationally owned corporations. We, the people, do not want to, nor need to, bludgeon them cruelly to death in a manner which anyone else would be prosecuted for. Yet, it is legal for these corporates????????????? How does this work????? The law being set aside to bludgeon koalas to death is OK. Of course it is, because it's also OK to bludgeon the people with high power bills and expect them to subsidise this tyranny.

I object to this madness – not just killing koalas and birds; this crueling of small business with high prices and inconsistent power supply; forcing people to go without battling heat and cold extremes, sometimes ending in death which is just murder by proxy for which people need to be accountable.

I object. This is unacceptable, unreliable, unaffordable, environmentally destructive infrastructure and should be a non-starter. It simply is NOT in Australia's best interests.

What really gets up my nose is that this is already a DONE DEAL – all this is just to PRETEND THAT THERE HAS BEEN SOME SORT OF CONSULTATIVE PROCESS in order to tick Governmental and environmental boxes while they railroad the people living in the regional areas.

We are just like the koalas and birds: Expendable.
