Subject: Spring Farm Advanced Resource Recovery Technology Facility Modification 6
Importance: High

Hi Bianca,

Unfortunately I was ill last week and didn't get a chance to send in my submission but I am hoping it's not too late.

Before we moved into the area, we were told that the facility was for **recycling only**. Now it's called a waste management centre. Its very unfortunate so close to new homes, with more building in the area, that there would be a tip right next to them.

We have contacted the ETA a few times about the smell, and everyone else in the area does too but its still ongoing. Is it possible to set up the community meetings again like a few years ago. There wasn't as many houses then as there is now, that's probably why they were cancelled.

With regards to the inclusion of liquid waste to the Spring Farm Recovery Facility, we ask the following: -

1. Is anything included in the proposal going to increase air pollution and odour as it's already unbearable most mornings as we walk outside our home or leave any windows open.
2. Will the liquid waste evaporate and become gas which are harmful to our family?
3. Will the liquid waste increase the smell in the area? it is bad enough at the moment as it is
4. Will the liquid be going into the soil?

We like to enjoy time outside in our new area with our family but when we are greeted with a stench so bad that you don't want to breath it in, it's not a very good outing.

Hope to hear from you soon.

thanks
