Karolina Kulczynska, of Mosman NSW, made the following submission on the project:

[Mangoola Mine - Modification 6 - Extraction Rate Increase](#)

Objects to this project

I object to this expansion of extraction rates on the grounds of the increasing danger of climate change. 97% of scientists agree that this is being caused by the increase of carbon in the atmosphere from activities such as burning fossil fuels. Australia must take a stance and begin to stop mining coal for both energy use domestically and for export. This begins by slowing production of mines, not increasing. The consequences of increasing fossil fuel use, which will be aided by increasing the extraction rate of Mangoola Mine, are catastrophic on an economic, environmental and humanitarian level.
