Content:
The Dunloe Sand Park Quarry Mod 2 should not be permitted to proceed.

I believe that the proposed increased vehicle movements will have significant unacceptable impact on the endangered Tweed Coast Koala Population and that the proposal will also impose unacceptable impacts on the local traffic network and amenity of residents along the trucking route.

Their Environmental Assessment for flora and fauna is limited to the following statement:

"The proposed modification will not involve any construction or demolition works, therefore there will be no impacts to flora and fauna as a result of the proposed modification. Existing flora and fauna measures will continue to be employed to mitigate any potential impacts. No additional assessment or mitigation is required."

Where is their evidence for their implied claim that only construction and demolition works impact endangered koalas? I believe that increased noise and traffic will adversely affect them.

The dwindling koala population in this area should not be exposed to this additional noise, general commotion, stress, and danger of being hit by a truck on the road.
