Major Projects Submission

Project: Queensland-Hunter Gas Pipeline
Application reference number: 06_0286

Stuart Gall
"Tycannah"
Moree NSW 2400

This submission is to object to the current route for this project.

The Minister states "the project is essential to the State for economic, environmental and social reasons". The current route for the pipeline is unacceptable to me for the following reasons,

- *This project will devalue my land
- *May render subdivisions for residential use impossible
- *Will be a massive inconvenience during construction
- *Will cause major and long term soil compaction issues which will increase costs and reduce production.

The lack of common decency from the Department of Planning to not personally contact me for my views on the use of my private land (when public land is available) for a State community good project does not equate to good governance.

If this project is to benefit the entire State community as the Minister states then it should be carried out on the States Land (Travelling Stock Routes).

Yours Faithfully
