Submitted via DPE Project Portal

Dear Mr O'Donoghue

Cadia Valley Operations (PA 06_0295) Request for Additional Information Extension of Time

I refer to your letter dated 11 April 2023, which seeks additional information on three air quality related aspects.

As you are aware, Cadia Holdings Pty Limited (CHPL) are currently awaiting receipt of the ANSTO air quality report and associated dataset. CHPL currently expects to receive this report by 31 May 2023. The inclusion of the ANSTO air quality report findings are fundamental to the additional air quality modelling to be undertaken by Todoroski Air Sciences as described in point one of the Departments letter.

Given the delay in CHPL's receipt of the ANSTO report and to allow for the subsequent air quality modelling to be undertaken, we request that the Department grant a four week extension of time to the provision of this information (i.e. this information will be provided by the 4 July 2023) to allow for the completion and review of the modelling report. The ANSTO data is the outer boundary of monitoring data that will be used to provide a further calibration and additional rigour to the model. The model will be used to inform CHPL contribution within the Human Health Risk Assessment and the ANSTO data will be compared with this report by community members.

CHPL notes that it is not seeking an extension of time for the provision of information in relation to points two and three of the Departments letter (i.e. advice relating to points two and three will be provided by 6 June 2023 as noted in the Departments letter).

Should you have any further queries regarding this matter, please do not hesitate to contact David Coe on 0413 171 330.

Yours sincerely,

Geoffrey Newcombe
Head of Strategy and Integrated Planning
