10 December 2002

Hi Craig

Hope all is well. Following are the call IDs for the tapes with sites at Tharbogang, NSW. I could not be more specific with the *Vespadelus* sp. Many of the calls appeared to be consistent with *Vespadelus vulturnus* but there is considerable overlap with *V. regulus* and *V. baverstocki*. I would use trapping results to estimate abundance and presence of this group.

All the best
