

SCENARIO 1 - PRE COLLECTOR ROAD

- Evacuation possible along Hearnes Lake Road. applicable 1 in 100 year flood level is RL 2.6m AHD. hearnes lake road has minimum centreline level of RL2.51m AHD so vehicular access will be possible.
- In event of high berm levels, pedestrian egress is possible along the higher ground. This route is highlighted on plan.

SCENARIO 2 - POST COLLECTOR ROAD:

- This road would be constructed at a minimum RL of 3.5m AHD and so will be above all likely flood events in Hearnes Lake including rare occasions when berm levels are elevated.
