Subject: Online Submission from Karin Hensen of n/a (object)

CSG is not an alternative to coal. It will increase, not decrease, Greenhouse Gas emissions. The extraction of CSG using the highly contentious fracking technique has the potential to irreversibly contaminate our water supplies. Obviously opening cracks in the surface rock can only further exacerbate the loss of water from dams. Very recently its has emerged that despite one of the wettest years in a decade, water levels in Woronora Dam dropped
