Content:

Previously the area within the water catchment of the upper Nepean which is part of the Metropolitan special area as defined in Sydney Catchment Authorities Special Areas Strategic Plan of Management 2007 is an area that requires people entering the site to meet the following criteria: Access is for an activity or purpose that will benefit the SCA's management of the Special Areas, Controlled Areas, water storages and other SCA managed land, or provide a broader public benefit Access will not compromise the integrity, operation or management of any SCA infrastructure or catchment areas

Access will not:

lower the quantity of water in the water storages or catchments
lower the quality of surface and groundwater inflows to water storages or catchments
have a negative impact on the ecological integrity of the Special Areas.

I do not believe that a private company whose ultimate purpose is to make a profit will meet the above requirements during the lifespan of the mining project. I truly believe that if CSG which is a heavy industrial process is approved in a sensitive water catchment area it is a true sign of political madness whereby no weight is given to environment and social factors. Politicians need to look beyond the next voting polls and look at the long term viability of the region. Mines may last for 50years, water sources will last for millenia. Hopefully common sense will prevail.
