CSG mining must be halted until independent investigation into the full impacts of CSG development are carried out. The public demands this!! Stop valuing mining over the environment and public welfare.

The risks of CSG mining are well evidenced and the Premier has acknowledged that the current legislation is not adequate to manage development of the industry. In this context, no new applications or modifications should be approved and existing projects should be frozen, to conduct an investigation into the full impacts of CSG development.

The drinking water catchment is unsuitable for CSG exploration and production. Allowing this development to go ahead contradicts the pre-election promise from Barry O'Farrell: "The next Liberal/National Government will ensure that mining cannot occur... in any water catchment area, and will ensure that mining leases and mining exploration permits reflect that common sense; no ifs, no buts, a guarantee."

The development of this coal seam gas project is being layered on top of extensive coal mining and a fault line, without an assessment of the combined impacts.

There is widespread public opposition to CSG exploration and mining in the area. This includes a public petition of over 30,000 signatures, formal votes against CSG mining by local councils and two actions opposing CSG development attended by over 3,000 people each.

Development must always be considered in the context of the surrounding area. This can change over time. Given this, a modification for an indefinite start date is irresponsible.

The Illawarra Escarpment is a high risk bush fire area, exacerbated by its highly combustible peat base. Indeed, in August 2012 a bush fire burnt through AI09 and AI10 in this project. Extracting and piping gas in this environment will increase fire risks.

I will do my utmost to oppose any government party that continues to fail to manage this issue as you are.

Regards,
Greg Nash
