Content:

The risks of CSG mining are well evidenced and the NSW Premier has acknowledged that the current legislation is not adequate to manage development of the industry. No new applications or modifications should be permitted until an investigation into the full impacts of CSG development is conducted.

The drinking water catchment is unsuitable for CSG exploration and production. Allowing this development to go ahead contradicts the pre-election promise from Barry O'Farrell:

The Illawarra Escarpment is a high risk bush fire area, exacerbated by its highly combustible peat base. Indeed, in August 2012 a bush fire burnt through AI09 and AI10 in this project. Extracting and piping gas in this environment will increase fire risks.

The development of this coal seam gas project is being layered on top of extensive coal mining and a fault line, without an assessment of the combined impacts.

There is widespread public opposition to CSG exploration and mining in the area. This includes a public petition of over 30,000 signatures, formal votes against CSG mining by local councils and two actions opposing CSG development attended by over 3,000 people each.
