Subject: PA08-0212 proposed site changes

Dear Carl,

Spoke with you yesterday along with Austral bricks representatives and Chris Dickson.

The changes to the quarry site proposed at Mandurama I feel would impact in a most negative manner.

The original siting of the proposed quarry I feel was approved partially because of its close proximity to the cement works and its relation to the industrial corridor. The new site location is now impinging firmly on rural land , the site, noise and dust will be far worse for our property than in it's original location. So it should stay there.

The core samples originally taken confirmed this to be a good site.

I give permission for my views to be accessible online and to all other parties. At the same time total transparency on this issue should be available to myself.

I do not approve of the changed siting!

Regards

Patti Holecek
