Dear «Salutation»,

## RE. ORCHARD HILLS WASTE & RESOURCE MANAGEMENT FACILITY

The ongoing community consultation for the proposed Orchard Hills Waste & Resource Management Facility is delivering constructive results.

By listening to the community's concerns regarding potential air, noise and visual pollution we have improved our proposal by:

- Committing to the latest air and noise monitoring technology to ensure the facility operates within the strict environmental guidelines and regulations set by the authorities; and
- Investing in additional landscaping along the northern boundary to provide greater visual amenity to the site as well as further ameliorating noise.

We're disappointed by the latest scare campaign regarding leachate and water contamination. The two consultants who prepared the misleading reports and presented their flawed conclusions to the recent community meeting have never been on site nor have they received technical briefings.

The leachate and water management plan integrates industry best practice solutions and provides maximum protection to the surrounding environment. The non-putrescible Commercial and Industrial and Construction and Demolition waste being deposited on site will be highly treated and produce significantly lower levels of leachate and odour compared to domestic and organic waste.

The Orchard Hills Waste & Resource Management Facility has been designed to the highest planning and environmental standards.

Enclosed is a copy of the latest project update, which provides further detail on the Orchard Hills Waste & Resource Management Facility and clarifies some of the misconceptions.

We would like to hear from you. If you have any queries or comments, please don't hesitate to contact us on (02) 9299-5400 or rodericksyd@ozemail.com.au.

Yours sincerely,

Rick Miller  
Director

Andrew Drury  
Director
