

**Objects to this project**

I Richard Ennis of Golden Grove am strongly opposed to the Sapphire Wind Farm.

The windmills will be causing visual and enviromental pollution.The damage that is going to be done to the enviroment and heritage in the construction of these eyesores in such a marginal wind area is beyond belief.The planners of this windfarm realise to get these eyesores constructed they have to compensate the landholder. The bigger the eyesore the more enviromental damage they cause the more they will be compensated.

What about our property in the immediate vicinity that will be polluted by these eyesores.

When I heard about the windfarm I approached the company about the landscaping they were advertising they were doing to do to places affected by these eyesores. They did not know of this place and that it had two dwellings on it adversely affected by the windfarm .So much for their community consultation. They have still have not come back to us with any proposed landscaping solutions and implied they will only be compensating the landholders whose places they are polluting and do not want to set a precedent by compensating any adjoining places that will be impacted by this pollution.

The project talks about hooking into the grid which grid there are two and do they have permission to do so.

When I asked the Company about backing its claims I was told that information did not have to be produced. What assurances does the Government have in place to hold the Company accountable for what it claims it will and can do.
