Dear Stephen

Re: Ravensworth Operations Project – Revision of Management Plans

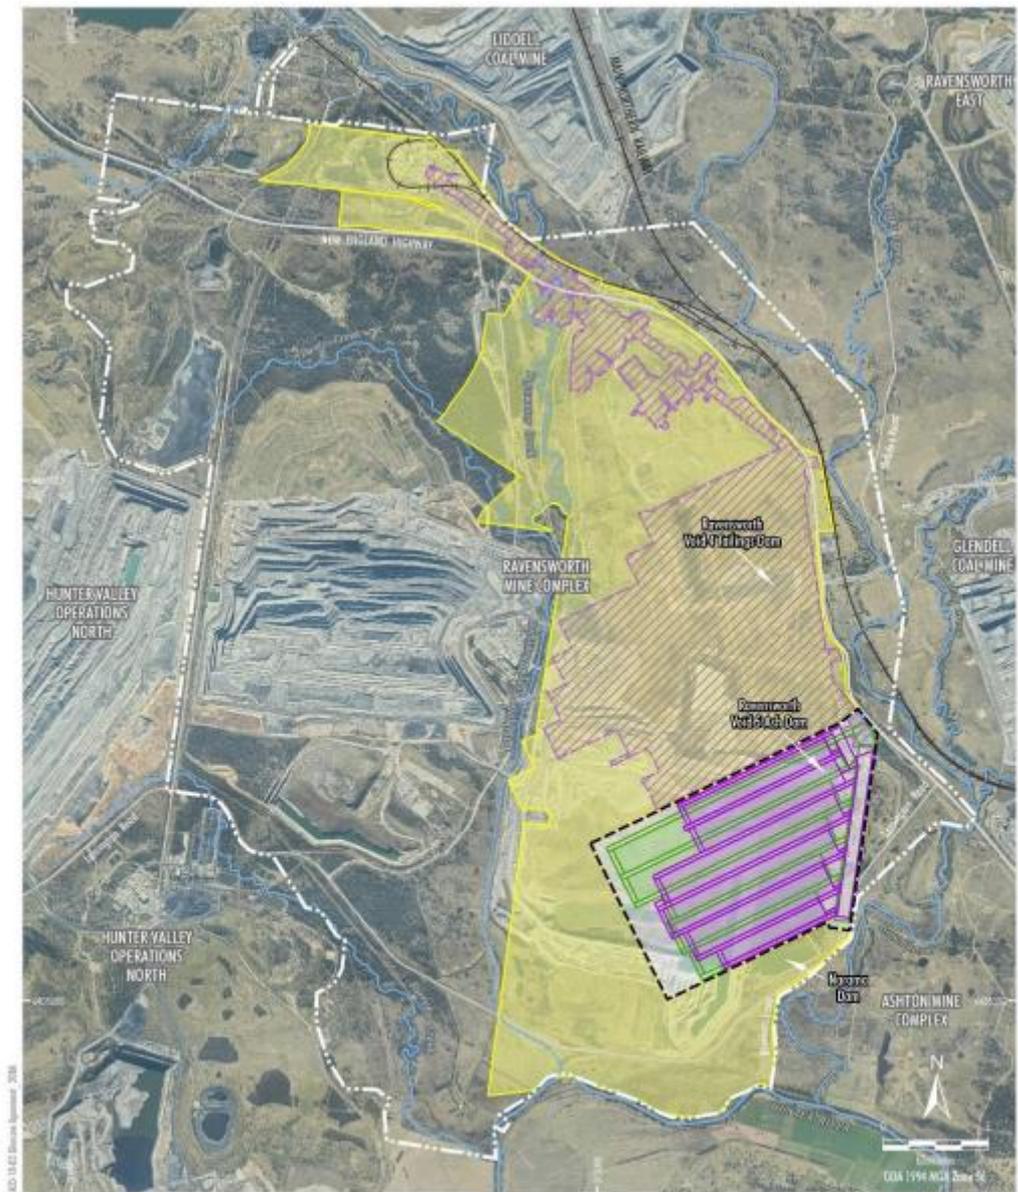

The Ravensworth Mine Complex and Ashton Mine Complex are neighbouring open cut and underground coal mining complexes, located in the Singleton Local Government Area, in the Hunter Valley region of New South Wales (NSW). The Ravensworth Mine Complex includes the Ravensworth Operations Project and the Ravensworth Underground Mine (RUM).

On 6 July 2022, the NSW Department of Planning and Environment (DPE) approved Modification 10 to the RUM Development Consent DA 104/96 and Modification 11 to the Ashton Coal Project Development Consent DA 309-11-2001-i. These modifications allow for the integration of the two neighbouring underground mines and enables Ashton Coal Operations Pty Ltd (ACOL) to access and extract approved but unmined coal resources from a portion of the RUM (Figure 1). Glencore will continue to be responsible for the management of the remaining areas of the RUM (i.e. outside of the ACOL-operated portion of the RUM) including the completed Pikes Gully Longwalls 1 to 9.

As a result of the abovementioned modifications, ACOL will update the Ashton Coal Project environmental management plans to incorporate the ACOL-operated portion of the RUM.

In addition, Glencore will update its environmental management plans for the Ravensworth Operations Project (Project Approval 09_0176) to describe the areas of the RUM that will be subject to management by ACOL. The proposed changes to the Ravensworth Operations Project management plans are administrative in nature and the additional text is duplicated in the revised Ashton Coal Project management plans, which will be subject to consultation with relevant agencies. Accordingly, Glencore seeks approval from the Planning Secretary of DPE to waive the consultation requirements for the revised Ravensworth Operations Project management plans in accordance with the following conditions of Project Approval 09_0176:

- Condition 9, Schedule 3 (Noise Management Plan);
- Condition 24, Schedule 3 (Air Quality and Greenhouse Gas Management Plan);
- Condition 31, Schedule 3 (Water Management Plan);
- Condition 38, Schedule 3 (Biodiversity Management Plan);
- Condition 42, Schedule 3 (Heritage Management Plan); and
- Condition 1, Schedule 5 (Environmental Management Strategy).
