Thanks Craig,
 Having reviewed the Concrete Washout Procedure (Rev D), The Office of Water is satisfied that the concrete washout facility can be managed in a way which protects the water quality of the Tomago Aquifer.

Regards

 Hi Mark

Please see Section 4.4 of the attached Concrete Washout Procedure (Rev D) which incorporates your suggestions.

I have also included the Waste Management Plan for your information.

 Subject: Re: Fwd: Newcastle Gas Storage Facility Concrete Washout Procedure

Hi Craig,

Elizabeth Cala passed on your email to me. I have had a quick look at the proposed washout procedure. I have no problems with the process for cleaning out the trucks or managing the concrete solids. However, the procedure states that up to 30000L of water will be required, and states that excess water will be pumped out of the skips prior to removal "as per the WMP". I am not sure that I have seen a WMP to know where this will go. The report should state where this potentially contaminated water will be disposed of. The report should note that Skips should be pumped dry enough that no residual water will escape from the skips during transport.

Hi Elizabeth

One of the original Statement of Commitments (SoC) approved by DPI (MP_10 0133) stated that no concrete trucks are to be washed on site.

As this is not practical CBI have had to come up with a Procedure to contain concrete washout water during construction of the Newcastle Gas Storage Facility and would like comment from NOW.

This is required as part of the consultation process so that AGL can have the SoC amended.

Please see the attached Procedure for your review and comment

Kind regards

Craig Rivera
