17 December 2010
Job No. 5659E

ELECTRICAL SUPPLY

The electrical infrastructure will require to be upgraded and relocated to meet the maximum demand of the development.

The electrical maximum demand for the development is 3,350kVA which is broken up as follows:–

Phase	No. Units	Stage	Max Demand
Phase 01	68 Units	Stage 01	345kVA
Phase 01	55 Units	Stage 01	280kVA
Phase 01	27 Units	Stage 02	140kVA
Phase 02	177 Units	Stage 01	895kVA
Phase 02	159 Units	Stage 02 and 03	805kVA
Phase 02	175 Units	Stage 04	885kVA
		TOTAL	**3,350kVA**

Initial advice from the Supply Authority, Energy Australia, suggests that the existing substations located within the development will need to be decommissioned and upgraded. The existing Riverwood zone substation and high voltage network is near full capacity.

The existing high voltage network will need to be upgraded to meet the expected electrical load for the development. All new infrastructure for the development is proposed to be underground. It is proposed that the development be served from four padmount substations located within the development adjacent to the buildings.

The above will require confirmation with Energy Australia from our formal application for the new supply.

STREET LIGHTING

New street lighting will be provided and installed to Energy Australia street lighting network standards. All cabling to the proposed street lighting fixtures will be installed underground in dedicated service trenches. The new street lighting fixtures will be chosen to suit the architectural detail of the development.

COMMUNICATION SERVICES

Telephone and Internet

The existing communications cable infrastructure in the existing road system within the development area is providing both telephone and internet services to the existing residential buildings. These services will need to be decommissioned and removed.

It is proposed that multiple underground communications conduits and pit systems be installed throughout the development. The multiple conduit and pit system will allow for the future installation of both copper communications cables and optical fibre communications cables from the available Network Carriers and Service Providers.

Optical Fibre Cable Network

There is an existing optical fibre cable infrastructure near the proposed development. The underground optical fibre cable infrastructure runs along the south side of Washington Avenue from Union Street – Roosevelt Street – Washington Avenue – Belmore Road.

Connection to the fibre optic network will be via the new underground communications conduit and pit system.

Pay TV

Pay TV is available via two methods, satellite dish or co–axial cable.

These two methods will be investigated during design with the relevant Service Providers.

For cable connection, the multiple conduit and pit system would be extended to each building.

WARNING

EnergyAustralia's plans show the position of assets at the time of installation and may not account for subsequent changes to road alignments, fences or buildings. The plans show no more than the presence or absence of EnergyAustralia assets in the street.
Persons working near electricity networks must exercise care and will be held responsible for any damage caused.
You must excavate by hand or use vacuum excavation to establish the location of EnergyAustralia underground cables and associated assets.
Underground: Working near a cable may result in electric shock even if no contact is made. Any work in the vicinity of any cable should only be performed using safe work methods developed in accordance with the recommendations included in WorkCover Code of Practice for Excavation and WorkCover Guide for Work Near Underground Assets
as well as recommendations of EnergyAustralia's Network Standard NS156.
Overhead: Do not excavate near poles or towers until the stability of the foundation has been assessed by EnergyAustralia. Cables or earth conductors may be present close to substations, poles or towers. Workers must maintain safe approach distances and follow applicable WorkCover Codes of Practice.
NOTE: You must keep this plan on site during excavation works and have on site a person trained to read this plan.
