Infrastructure Assessments
Department of Planning and Environment
Locked Bag 5022
Parramatta NSW 2124

Attention: Nick Hearfield

Dear Mr Hearfield

Re: Request for Environmental Assessment Requirements – Thrumster Wastewater Scheme, Port Macquarie-Hastings local government area (SSI 56980459)

Thank you for your e-mail on 31 March 2023 inviting input to the preparation of Secretary's Environmental Assessment Requirements (SEARs) for the Thrumster Wastewater Scheme project from the Biodiversity and Conservation Division (BCD) of the Biodiversity, Conservation and Science Directorate in the Environment and Heritage Group of the Department of Planning and Environment. I appreciate the opportunity to provide advice.

The BCD forms part of a Group that has responsibilities relating to biodiversity (including threatened species and ecological communities, or their habitats), National Parks and Wildlife Service estate, flooding, and coastal processes and associated hazards.

We note the project will be assessed as State Significant Infrastructure in accordance with Part 5 of the *Environmental Planning and Assessment Act 1979* (EP&A Act). The Secretary's Environmental Impact Statement (EIS) SEARs provided by the BCD are limited to biodiversity, National Parks and Wildlife Service estate, acid sulfate soils, flooding, and coastal processes and associated hazards.

The proponent should ensure that the EIS will be sufficiently comprehensive to enable unambiguous determination of the extent of the direct and indirect impact(s) of the project.

In particular, the EIS should include consideration of:

1. The direct and indirect impacts of the proposal on the mapped coastal wetland on and adjoining the subject land in accordance with the State Environmental Planning Policy (Resilience and Hazards) 2021.

2. The direct and indirect impacts of the proposal on the significant biodiversity values of the area including, but not limited to, the following threatened species and communities that have been recorded on or near the subject land:

    - Freshwater Wetlands on Coastal Floodplains of the New South Wales North Coast, Sydney Basin and South East Corner Bioregions
    - Swamp Sclerophyll Forest on Coastal Floodplains of the New South Wales North Coast, Sydney Basin and South East Corner Bioregions
    - Swamp Oak Floodplain Forest of the New South Wales North Coast, Sydney Basin and South East Corner Bioregions
    - *Maundia triglochinoides*

- Dwarf Heath Casuarina (*Allocasuarina defungens*)
- Native Guava (*Rhodomyrtus psidioides*)
- Scrub Turpentine (*Rhodamnia rubescens*)
- Wallum Froglet (*Crinia tinnula*)
- Black-necked Stork (*Ephippiorhynchus asiaticus*)
- Eastern Grass Owl (*Tyto longimembris*)
- Eastern Ground Parrot (*Pezoporus wallicus wallicus*)
- Australasian Bittern (*Botaurus poiciloptilus*)
- Koala (*Phascolarctos cinereus*)

3. The risk of a significant flood causing the wastewater system to surcharge and result in waterway contamination with potential impacts on the environment and community. It is noted that the wastewater treatment plant site is within the 1% AEP flood extent and is therefore likely to be flood affected in floods greater than the 1% AEP. For this reason, the design of the wastewater system should consider the impact of flooding for such floods including the probable maximum flood.

We consider that this information is necessary to assess an EIS for the project.

The full list of our standard requirements that may need to be addressed in the EIS are provided in **Attachment A**. In preparing the EIS, the proponent should refer to the relevant guidance material listed in **Attachment B.**

If you have any questions about this advice, please do not hesitate to contact Mr Tom Schmidt, Senior Conservation Planning Officer, at tom.schmidt@environment.nsw.gov.au or on 6658 8227.

Yours sincerely

13/04/2023

DON OWNER
A/Senior Team Leader Planning, North East Branch
Biodiversity and Conservation

Enclosures:
Attachment A - BCD Standard Environmental Assessment Requirements (SSI-56980459)
Attachment B – Guidance Material (SSI-56980459).

Attachment A – Biodiversity and Conservation Division Standard Environmental Assessment Requirements (SSI-56980459)

Biodiversity

1. The EIS must assess biodiversity impacts related to the project in accordance with Section 7.9 of the Biodiversity Conservation Act 2017 using the Biodiversity Assessment Method (BAM) and must document this assessment in a Biodiversity Development Assessment Report (BDAR). The BDAR must include information in the form detailed in the *Biodiversity Conservation Act 2016* (s6.12), *Biodiversity Conservation Regulation 2017* (s6.8) and the BAM, unless the Biodiversity and Conservation Division and Planning and Assessment Group determine that the project is not likely to have any significant impacts on biodiversity values.
2. The BDAR must document the application of the avoid, minimise and offset framework including assessing all direct, indirect and prescribed impacts in accordance with the BAM.
3. The BDAR must include details of the measures proposed to address the offset obligation as follows:
   - The total number and classes of biodiversity credits required to be retired for the project;
   - The number and classes of like-for-like biodiversity credits proposed to be retired;
   - The number and classes of biodiversity credits proposed to be retired in accordance with the variation rules;
   - Any proposal to fund a biodiversity conservation action;
   - Any proposal to conduct ecological rehabilitation (if a mining project);
   - Any proposal to make a payment to the Biodiversity Conservation Fund.

   If seeking approval to use the variation rules, the BDAR must contain details of the reasonable steps that have been taken to obtain requisite like-for-like biodiversity credits.
4. The BDAR must be submitted with all spatial data associated with the survey and assessment as per Appendix 11 of the BAM.
5. The BDAR must be prepared by a person accredited in accordance with the Accreditation Scheme for the Application of the Biodiversity Assessment Method Order 2017 under s6.10 of the *Biodiversity Conservation Act 2016*.

Water and soils

6. The EIS must map the following features relevant to water and soils including:
   a. Acid sulfate soils (Class 1, 2, 3 or 4 on the Acid Sulfate Soil Planning Map).
   b. Rivers, streams, wetlands, estuaries (as described in s4.2 of the BAM).
   c. Wetlands as described in s4.2 of the BAM.
   d. Groundwater.
   e. Groundwater dependent ecosystems.
   f. Proposed intake and discharge locations.
7. The EIS must describe background conditions for any water resource likely to be affected by the project, including:
   a. Existing surface and groundwater.
   b. Hydrology, including volume, frequency and quality of discharges at proposed intake and discharge locations.

c. Water Quality Objectives (as endorsed by the NSW Government http://www.environment.nsw.gov.au/ieo/index.htm) including groundwater as appropriate that represent the community's uses and values for the receiving waters.
d. Indicators and trigger values/criteria for the environmental values identified at (c) in accordance with the ANZECC (2000) Guidelines for Fresh and Marine Water Quality and/or local objectives, criteria or targets endorsed by the NSW Government.
e. Risk-based Framework for Considering Waterway Health Outcomes in Strategic Land-use Planning Decisions http://www.environment.nsw.gov.au/research-and-publications/publications-search/risk-based-framework-for-considering-waterway-health-outcomes-in-strategic-land-use-planning

8. The EIS must assess the impacts of the project on water quality, including:
   a. The nature and degree of impact on receiving waters for both surface and groundwater, demonstrating how the project protects the Water Quality Objectives where they are currently being achieved, and contributes towards achievement of the Water Quality Objectives over time where they are currently not being achieved. This should include an assessment of the mitigating effects of proposed stormwater and wastewater management during and after construction.
   b. Identification of proposed monitoring of water quality.
   c. Consistency with any relevant certified Coastal Management Program (or Coastal Zone Management Plan)

9. The EIS must assess the impact of the project on hydrology, including:
   a. Water balance including quantity, quality and source.
   b. Effects to downstream rivers, wetlands, estuaries, marine waters and floodplain areas.
   c. Effects to downstream water-dependent fauna and flora including groundwater dependent ecosystems.
   d. Impacts to natural processes and functions within rivers, wetlands, estuaries and floodplains that affect river system and landscape health such as nutrient flow, aquatic connectivity and access to habitat for spawning and refuge (e.g. river benches).
   e. Changes to environmental water availability, both regulated/licensed and unregulated/rules-based sources of such water.
   f. Mitigating effects of proposed stormwater and wastewater management during and after construction on hydrological attributes such as volumes, flow rates, management methods and re-use options.
   g. Identification of proposed monitoring of hydrological attributes.

Flooding and coastal processes and associated hazards

10. The EIS must map the following features relevant to flooding as described in the Floodplain Development Manual 2005 (NSW Government 2005) including:
    a. Flood prone land.
    b. Flood planning area, the area below the flood planning level.
    c. Hydraulic categorisation (floodways and flood storage areas).
    d. Flood hazard

11. The EIS must describe flood assessment and modelling undertaken in determining the project's design flood levels for events, including a minimum of the 5% Annual Exceedance Probability (AEP), 1% AEP, flood levels and the probable maximum flood, or an equivalent extreme event.

12. The EIS must model the effect of the project (including fill) on the current flood behaviour for a range of design events as identified in 11 above including the 0.5% and 0.2% AEP year flood events as proxies for assessing sensitivity to an increase in rainfall intensity of flood producing rainfall events due to climate change.

13. Modelling in the EIS must consider and document:
    a. Existing council flood studies in the area and examine consistency to the flood behaviour documented in these studies.
    b. The impact on existing flood behaviour for a full range of flood events including up to the probable maximum flood, or an equivalent extreme flood.
    c. Impacts of the project on flood behaviour resulting in detrimental changes in potential flood affection of other developments or land. This may include redirection of flow, flow velocities, flood levels, hazard categories and hydraulic categories.
    d. Relevant provisions of the NSW Floodplain Development Manual 2005.

14. The EIS must assess the impacts of the project on flood behaviour, including:
    a. Whether there will be detrimental increases in the potential flood affectation of other properties, assets, and infrastructure.
    b. Consistency with Council floodplain risk management plans.
    c. Consistency with any Rural Floodplain Management Plans.
    d. Compatibility with the flood hazard of the land.
    e. Compatibility with the hydraulic functions of flow conveyance in floodways and storage in flood storage areas of the land.
    f. Whether there will be adverse effect to beneficial inundation of the floodplain environment, on, adjacent to or downstream of the site.
    g. Whether there will be direct or indirect increase in erosion, siltation, destruction of riparian vegetation or a reduction in the stability of river banks or watercourses.
    h. Any impacts the project may have upon existing community emergency management arrangements for flooding. These matters are to be discussed with the NSW SES and Council.
    i. Whether the project incorporates specific measures to manage risk to life from flood. These matters are to be discussed with the NSW SES and Council.
    j. Emergency management, evacuation and access, and contingency measures for the project considering the full range of flood risk (based upon the probable maximum flood or an equivalent extreme flood event). These matters are to be discussed with and have the support of Council and the NSW SES.
    k. Any impacts the project may have on the social and economic costs to the community as consequence of flooding.
