

Our ref: DOC25/337563

Your ref: SSI-82522960

Vince Di Bono
Planning Officer
Department of Planning, Housing and Infrastructure
Email: vince.dibono@dpie.nsw.gov.au

Dear Vince,

CPHR response – Bulloo Interlink Pipeline Secretary's Environmental Assessment Requirements

Thank you for your request via the NSW Planning Portal dated 17 April 2025 seeking the Conservation Programs, Heritage and Regulation Group (CPHR) of the NSW Department of Climate Change, Energy, the Environment and Water (NSW DCCEEW) input into the Department of Planning, Housing and Infrastructure (DPHI) Secretary's Environmental Assessment Requirements (SEARs) for the preparation of an Environmental Impact Statement (EIS) for the Bulloo Interlink Pipeline (SSI-82522960).

We have considered your request and provide recommended SEARs for the proposed development in Attachment A. In preparing the EIS, the proponent should refer to the relevant guidance material listed in Attachment B. We recommend the EIS appropriately address the following:

1. Biodiversity and offsetting
2. National Park Estate
3. Water and soils
4. Flooding

If you have any questions about this advice, please contact Nikki Pridgeon, Senior Conservation Planning Officer, via nikki.pridgeon@environment.nsw.gov.au or (02) 5852 6807.

Yours sincerely,

Liz Mazzer
A/Senior Team Leader Planning North West
Conservation Programs, Heritage & Regulation Group

5 May 2025

Attachment A - Environmental Assessment Requirements

Attachment B - Guidance Material

Standard Environmental Assessment Requirements

CPHR	Conservation Programs, Heritage & Regulation Group of the NSW Department of Climate Change, Energy, the Environment and Water
The Department	NSW Department of Planning, Housing and Infrastructure
NPWS	National Parks and Wildlife Service

Project specific requirements

As the project is located between Sturt National Park and Narriearra Caryapundy Swamp National Park, additional consultation with NPWS and CPHR is required to ensure impacts are appropriately identified, addressed and mitigated (for example, any impacts on habitat connectivity between the National Parks).

NPWS should be consulted early in the EIS preparation to discuss any construction and operational impacts to fire trails for vehicle access. Impacts include, but are not limited to, additional truck movements, road widening, turn around points, and increased fire trail maintenance schedule and budgetary requirements incurred by NPWS.

CPHR should be consulted early during preparation of the biodiversity development assessment report (BDAR), to discuss species specific survey requirements for the following cryptic species credit species:

- a. A saltbush (*Atriplex sturtii*).
- b. Grey grasswren (*Amytornis barbatus barbatus*).
- c. Grey Range thick-billed grasswren (*Amytornis modestus obscurior*).

Ancillary development components

The assessment should include all components of the proposal, including any ancillary activities such as road and track widening to enable transport of infrastructure components, connecting pipelines and transmission lines etc.

Native vegetation regulatory map – land categorisation

Clearing of native vegetation on land that meets the definition of Category 1 - Exempt Land (as defined under the Local Land Services Act 2013 (LLS Act)) does not require assessment or offsetting under the Biodiversity Conservation Act 2016, however the following must still be considered:

- **Prescribed impacts** as outlined in chapter 6 of the Biodiversity Assessment Method (2020). E.g. there are threatened fauna species whose habitat may include land which meets Category 1- Exempt criteria. Fauna survey on Category 1 land may be necessary to meet the requirements of the BAM.
- Potential impacts to **Matters of National Environmental Significance** under the Environment Protection and Biodiversity Conservation Act 1999 on Category 1 – exempt land must also be considered.

Section 60F of the LLS Act provides the transitional arrangements that are in place until a comprehensive NVR Map is published. During the 'transitional period' assessors can make a reasonable approximation of land categorisation for unpublished layers, in consultation with the landholder.

Where a reasonable approximation is required, it is recommended that:

- assessors first identify whether land meets criteria for Category 2 - Regulated Land, prior to Category 1 - Exempt Land.
 - In some circumstances, land may meet multiple map criteria i.e. criteria for Category 2 - Regulated Land, AND Category 1 - Exempt Land
 - In most circumstances' Category 2 - Regulated Land criteria will determine the categorisation of the land, rather than Category 1 - Exempt Land criteria.

A statewide draft Native Vegetation Regulatory Map is publicly available for proposals that affect rural land as defined under Part 5A of the Local Land Services Act 2013. This map as it relates to the development site must be referred to during preparation of the Biodiversity Development Assessment Report (BDAR) and prior to the BDAR being submitted to the consent authority. The draft map is available here: [Geocortex Viewer for HTML5 \(nsw.gov.au\)](#).

Where Category 2 – Regulated land is mapped as present on a development site, this will be identified on the draft map and is land where the BAM must be applied. However, there are some Category 2 criteria for which state-wide comprehensive mapping is not currently incorporated within the draft map.

State-wide comprehensive mapping of all critically endangered ecological communities (CEECs) and critically endangered species of plants is not currently published on the draft Native Vegetation Regulatory map. CEECs and critically endangered species of plants are designated as category 2- sensitive regulated land (clause 108(2)(b), LLS Regulation). The presence of CEECs and/or critically endangered plants must be considered for site-scale refinement, regardless of published map products.

Please note that the draft Native Vegetation Regulatory Map is transitional and does not have regulatory effect for Category 1 mapped land. Where the draft map indicates that Category 1 – Exempt Land is present on a development site, early engagement with CPHR is encouraged.

To confirm at the site scale whether the criteria for Category 1 – Exempt Land is met:

- Site-based floristic assessment is required to verify the presence or absence of CEECs, critically endangered plants and threatened grasslands
- Review of any Environmental Planning and Assessment Act 1979 development consents or approvals applicable to the land is required to demonstrate whether the land has an existing obligation to be set aside for nature conservation; revegetation of native vegetation; or as a native vegetation offset.

Prior to the BDAR being submitted to the consent authority, the accredited assessor may submit a proposed land categorisation method to the CPHR North West Planning team at rog.nw@environment.nsw.gov.au for review.

For more information, see [Determining native vegetation land categorisation for application in the Biodiversity Offsets Scheme](#).

Biodiversity

1. Biodiversity impacts related to the proposed project are to be assessed in accordance with [Section 7.9 of the Biodiversity Conservation Act 2016](#) the [Biodiversity Assessment Method 2020](#) and documented in a [Biodiversity Development Assessment Report \(BDAR\)](#). Biodiversity Development Assessment Report (BDAR), unless:
 - a) a BDAR waiver is granted, or
 - b) the site is on biodiversity certified land.
2. The BDAR must apply the avoid, minimise, and offset framework; including assessing all direct, indirect, uncertain and prescribed impacts in accordance with the [Biodiversity Assessment Method 2020](#).

3. The BDAR must be submitted with all spatial data associated with the survey and assessment as per Appendix K of the BAM.
4. The BDAR must include details of the measures proposed to address the offset obligation as follows:
 - a. The total number and classes of biodiversity credits required to be retired for the development/project;
 - b. The number and classes of like-for-like biodiversity credits proposed to be retired;
 - c. The number and classes of biodiversity credits proposed to be retired in accordance with the variation rules;
 - d. Any proposal to fund a [biodiversity conservation action](#);
 - e. Any proposal to make a payment to the Biodiversity Conservation Fund.

If seeking approval to use the variation rules, the BDAR must contain details of the [reasonable steps](#) that have been taken to obtain requisite like-for-like biodiversity credits.

5. The BDAR must be prepared by a person accredited in accordance with the Accreditation Scheme for the Application of the Biodiversity Assessment Method Order 2017 under s6.10 of the *Biodiversity Conservation Act 2016*.
6. The EIS must contain a summary of the commitments set out in the BDAR to avoid, minimise and mitigate the biodiversity impacts of development that are to be implemented, post approval, by their inclusion in a Biodiversity Management Plan (BMP)). The preparation of a BMP to fulfil the avoid and minimise requirements of the BDAR must be included as a condition of consent/approval, unless otherwise agreed with CPHR. The BMP must include detailed measures to minimise impacts on biodiversity, monitoring and reporting requirements, proposed adaptive management measures, performance criteria recommended to meet states outcomes, remedial actions to be undertaken of actions fail to achieve stated outcomes, and any additional actions relevant to the management of biodiversity.

NOTE – A BDAR template and guidance document has been created to assist accredited assessors to prepare a BDAR. It has been developed in accordance with best practice, the minimum information requirements, and to support BDAR reviewers. The BDAR Template can be found [here](#) and the Guidance for the BDAR Template can be found [here](#).

Residual Prescribed Impacts within the BAM 2020

Prescribed impacts can be difficult to quantify as they may result in discrete impacts, spatially undefined impacts, ecological regime shifts and/or impact cascades over time. Consequently, avoiding or minimising such impacts is critical and will likely be a key consideration for the consent authority in determining conditions of approval for relevant proposals.

If avoidance and mitigation measures are not applicable or will not result in the complete reduction of prescribed impacts occurring, the assessor and proponent will need to consider options to compensate for unavoidable residual prescribed impacts.

The BAM-C does not calculate biodiversity credits to offset a prescribed impact. However, the consent authority has the discretion to increase the number of biodiversity credits to be retired (or other conservation measures to be undertaken), under a planning approval.

The assessment and calculation of a predicted offset obligation for any prescribed impacts must be presented prior to project determination and any impact occurring, in accordance with Section 7.14 of the *Biodiversity Conservation Act 2016*. The purpose of this requirement is to ensure:

- commitments to proposed mitigation measures for residual prescribed impacts are described and can be captured in the projects consent conditions; and
- the total offset obligation can be embedded in the project approval

It is recommended that the proponent and assessor consult with CPHR during the assessment process on prescribed impact assessment and calculation, when required.

Cumulative Impacts

Cumulative impacts should be assessed through application of the [Cumulative Impact Assessment for State Significant Projects guidance](#) (DPE, Oct 2022).

NPWS Managed Estate

Land reserved or acquired under the *National Parks and Wildlife Act 1974* (NPW Act)

As the proposed project is within, adjacent to, or in close proximity to, NPWS managed conservation estate (e.g. a national park, nature reserve, state conservation area, land which is declared wilderness under the *Wilderness Act 1987*), or is within, adjacent to, or in close proximity to, a watercourse that flows directly into NPWS managed conservation estate, then the EIS must address impacts upon such area/s.

Where NPWS managed estate is likely to be impacted, the EIS should include:

7. The following (as appropriate):
 - a. Evidence that the proponent has consulted with CPHR on the legal permissibility of the proposal under the NPW Act.
 - b. In the case of proposals on land declared as wilderness under the *Wilderness Act 1987*, evidence that the proponent has consulted with CPHR on the appropriateness of the proposal. That is, whether it is consistent with the objects of the *Wilderness Act 1987* (section 3) and the management principles for wilderness areas (section 9).
 - c. Alternative options that have been explored to avoid impacts on the NPWS managed estate (on-park) and a clear justification of any on-park components of the proposal.
 - d. If on-park impacts are considered unavoidable, consideration of the issues, including details of any compensation proposal, consistent with the Department's *Revocation, Recategorisation and Road Adjustment Policy* (2012) for proposals that are located wholly or partly in a National Park or other land acquired or reserved under the *National Parks and Wildlife Act 1974*.
8. Consideration of the matters identified in the *Guidelines for consent and planning authorities for Developments adjacent to National Parks and Wildlife Service Land* (NPWS, 2020) where a proposal adjoins or is in the immediate vicinity of NPWS managed estate, or is upstream of NPWS managed estate, which include:
 - a. The nature of the impacts, including direct and indirect impacts
 - b. The extent of the direct and indirect impacts
 - c. The duration of the direct and indirect impacts
 - d. The objectives of the reservation of the land
9. A description of the mitigation and management options that will be used to prevent, control, abate or minimise identified direct and indirect impacts associated with the proposal. This should include an assessment of the effectiveness and reliability of the measures and any residual impacts after these measures are implemented.

Water and soils
10. The EIS must map the following features relevant to water and soils including: a. Acid sulfate soils (Class 1, 2, 3 or 4 on the Acid Sulfate Soil Planning Map) b. Rivers, streams, wetlands, estuaries (as described in s4.2 of the Biodiversity Assessment Method) c. Wetlands as described in s4.2 of the Biodiversity Assessment Method d. Groundwater e. Groundwater dependent ecosystems f. Proposed intake and discharge locations.
11. The EIS must describe background conditions for any water resource likely to be affected by the project, including: a. Existing surface and groundwater b. Hydrology, including volume, frequency and quality of discharges at proposed intake and discharge locations c. Water Quality Objectives (<i>as endorsed by the NSW Government</i>) including groundwater as appropriate that represent the community's uses and values for the receiving waters d. Indicators and trigger values/criteria for the environmental values identified at (c) in accordance with the <i>ANZECC (2000) Guidelines for Fresh and Marine Water Quality</i> and/or local objectives, criteria or targets endorsed by the NSW Government e. <i>Risk-based Framework for Considering Waterway Health Outcomes in Strategic Land-use Planning Decisions.</i>
12. The EIS must assess the impacts of the project on water quality, including: a. The nature and degree of impact on receiving waters for both surface and groundwater, demonstrating how the project protects the Water Quality Objectives where they are currently being achieved, and contributes towards achievement of the Water Quality Objectives over time where they are currently not being achieved. This should include an assessment of the mitigating effects of proposed stormwater and wastewater management during and after construction; b. Identification of proposed monitoring of water quality.
13. The EIS must assess the impact of the project on hydrology, including: a. Water balance including quantity, quality and source b. Effects to downstream rivers, wetlands, estuaries, marine waters and floodplain areas c. Effects to downstream water-dependent fauna and flora including groundwater dependent ecosystems d. Impacts to natural processes and functions within rivers, wetlands, estuaries and floodplains that affect river system and landscape health such as nutrient flow, aquatic connectivity and access to habitat for spawning and refuge (e.g. river benches) e. Changes to environmental water availability, both regulated/licensed and unregulated/rules-based sources of such water f. Mitigating effects of proposed stormwater and wastewater management during and after construction on hydrological attributes such as volumes, flow rates, management methods and re-use options g. Identification of proposed monitoring of hydrological attributes.

Flooding

14. The EIS shall include a flood impact and risk assessment (FIRA). As a minimum the FIRA must:

- a. Consider the relevant provisions of the NSW Flood Risk Management Manual (2023) and associated guides, and existing council and government studies, information and requirements.
- b. Identify and describe existing flood behaviour on the site and its surrounding areas for the full range of events, including 5% AEP, 1% AEP, PMF and 0.5% AEP or 0.2% AEP and provide an assessment of the compatibility of the development and its users with flood behaviour. This may require flood modelling where existing flood information is not available.
- c. Determine and describe changes in post development flood behaviour, impacts of flooding on existing community and on the development and its future community for full range of events, 5% AEP, 1% AEP, PMF and 0.5% AEP or 0.2% AEP. This will typically require flood modelling.
- d. Consider impacts of climate change due to both sea level rise and increase in rainfall intensities considering relevant Council and government advice. The 0.5% AEP or 0.2% AEP events can be used to provide an understanding of the scale of change of flood behaviour relative to the 1% AEP event.
- e. Propose and assess the effectiveness of management measures required to minimise the impacts and risks of flooding to the development and its users and existing community.

Note:

- The scope of a FIRA must be consistent with the [Flood Risk Management Guideline LU01](#).
 - The FIRA will need to be tailored to suit the project being considered, whilst maintaining consistency with the FIRA guide.
- a. Flood prone land
 - b. Flood planning area, the area below the flood planning level
 - c. Hydraulic categorisation (floodways and flood storage areas)
 - d. Flood hazard.
