

BD Rework/Pump Rooms

Pic 1 - Inside Rework room (left)

Pic 2 - Inside Rework room (right)

Pic 3 - Outside view of Rework rooms

Rework Room:

Used to perform the relabelling of products within the BD/BARD range, usually to adhere to the TGA registered requirements for the specific product or adhoc marketing information added to products prior to sale to hospitals.

The room is empty as you can see from the picture 1 and 2 but it is set up with tables during a rework of which a staff member will then proceed to relabel product.

The partition walls inside pic 1 is to divide the room into two in order to run two separate rework jobs at the same time.

Pump Charging Station

Pic 1 – Service area

Pic 2 – Charging stations

Pump Charging Room:

Will store customers infusion pumps & monitors to recharge the battery, and will also include a space for the customer technician who may test/service a returning pump from Hospitals. Once the pump is serviced and charged they await dispatch back to Hospitals.

Pic 1 – Shows the technicians desk where he will test the functionality of the pump and service where applicable.

Pic 2 shows the charging stations where pumps are plugged into power and charged.

Pic 3 – Pump looks like this or in similar variations to this model.

DHL Multi-Customer Use Rooms

Room	Description of Activity
Decontamination / Clean Room	A segregated area for identified product returned from Hospitals that may require a holding place (segregated away from standard inventory) to be inspected by customer or staff (who are trained) for the appropriate cleaning or redirection of goods.
Surgical Rework Room	Similar to the BD rooms – this will be a value added service where DHL customers can utilise a Quality controlled area to perform re-labelling, re-boxing, and/or marketing campaign work that meets the needs of complying to the customers TGA registered product registration in Australia.

Customer A – Rework Room

Current average volume of bundling / shrink wrap is 10,000 units per month with an average of 1 work assignment per month. The rework product carried out in customer A's rework room will relate to eye care and products that can improve eye care.

Supply Chain shall request a new product code from global that will be used for the finished product bundle. Two types of rework may be requested:

The bundling activity will incorporate use of an additional outer carton with artwork - **Product Labelling** to support a new product new code.

Creating the **new product bundle**, can include bundling activities, including any materials that may be required to complete the activity plus validation of any equipment that will be used during the bundling activity.

Note – if any bundling components are sourced from other suppliers, these vendors must be qualified and included on the Approved Suppliers List. A quote for the work to be completed, along with a physical sample of the finished bundle, shall be requested from the vendor.
