Dear Jason

Wentworthville Public School

Salinity Report

Project No: 7068WV01

We are writing to confirm the following details in relation to the Salinity Report that has been requested by the DPE.

We confirm that we have reviewed and understood the Preliminary Salinity Assessment Report prepared by JK Environments (dated 6th May 2019). The report has also been reviewed by the following consultants –

- Civil and Structural Engineers – Henry and Hymas
- Electrical Engineers – Northrop
- Hydraulic Engineers – JHA
- Landscape Architects – Ground Ink

Following this review, we confirm that the implications of this testing are considered minor and can be managed through the detailing of the project. This will involve the following –

- **Structural Footings** - Additional concrete cover will be provided to reinforcement within concrete footings as required to comply with the relevant Australian Standards.
- **Landscaping** – Consideration will be given to the final plant selections and ground cover design in order to minimise the need for watering. This is supported by the current landscape design which features only native species of plants.
- **Hydraulic In-Ground Services** - All in-ground metallic pipework is to be wrapped in polyethylene sleeve and adequately sealed at all joints, junctions and termination points.

Architects (AIA)
Association for Learning
Environments Australasia
Association of Consulting
Architects (ACA)
National Association of
Women in Construction
(NAWIC)

Any other requirements of the report will be noted and carried out as required as the project progresses. In particular we confirm that further investigation will be undertaken where foundations or services are to be installed below a depth of 2m to assess for aggressive conditions. The specification for any footings and services to be located will then be designed appropriately.

Please contact us if you have any queries regarding this matter.

Kind regards

Fulton Trotter Architects

John Ward | Director
