Subject: RE: Reclamation APPENDIX A - 10570g1
Date: Thursday, 17 February 2022 1:25:31 PM

Victor,

An extension to the building over spring dam is proposed for the Borg facility at Oberon. Implementation of works to cover spring dam using the same specifications as previously used is appropriate and should maintain the aquifer flows. The process of installing a permeable strata will maintain conductivity of groundwater flows.

If required a site specific plan can be prepared after the building designs have been finalised.

Regard

Subject: Reclamation APPENDIX A - 10570g1

Hi Greg,

As discussed we have applied to fill the remaining portion of the spring dam at the Oberon site. We would like your opinion on whether the same or very similar methodology can be adopted bearing in mind we have completed partial reclamation successfully using your methodology. Water continues to flow from the dam.

A simple response to this email providing an indication of whether or not the methodology will work is sufficient.

Once approval is obtained we will ask for an update to the documentation if required.

Regards

Victor Bendevski
