SPI	St Peters Interchange
SRAD	Sir Reginal Ansett Drive
SSD	Stopping Sight Distance
SWTC	Scope of Work and Technical Criteria
TL	Test Level
Transport / TfNSW	Transport for New South Wales (includes the former Roads and Maritime Services)
UZF	Upper Zone of Formation
VMS	Variable Message Signs
WB	Westbound
WHS	Work Health and Safety
Term	Definition
A-Weighted	A spectrum adaptation that is applied to measured noise levels to approximate human hearing. A-weighted levels are used as human hearing does not respond equally at all frequencies.
CAD	Computer-Aided Design
CoRTN	Calculation of Road Traffic Noise, HMSO 1988
Day(time)	For road traffic noise, the daytime period is taken to be between 7 am and 10 pm.
dB	Decibel—a unit of measurement used to express sound level, based on a logarithmic scale. We typically perceive a 10 dB increase in sound as a doubling of that sound level.
dB(A)	Units of A-weighted sound levels.
DEC	NSW Department of Environment and Conservation, now known as the NSW Office of Environment and Heritage.
DECC	NSW Department of Environment and Climate Change, now known as the NSW Office of Environment and Heritage
DECCW	NSW Department of Environment and Climate Change and Water, now known as the NSW Office of Environment and Heritage

Term	Definition
DGA	Dense Graded Asphalt
DPE	NSW Department of Planning & Environment
ENMM	Environmental Noise Management Manual (RTA 2001)
EPA	NSW Environment Protection Authority
GIS	Geographic Information System
ICNG	NSW Interim Construction Noise Guideline (DECCW 1999).
INP	NSW Industrial Noise Policy (EPA 2000).
L_1	The sound pressure level that is exceeded for 1% of the time for which the given sound is measured.
L_{10}	The sound pressure level that is exceeded for 10% of the time for which the given sound is measured.
L_{90}	The sound pressure level exceeded for 90% of the measurement period. For 90% of the measurement period, it was louder than the L90.
L_{eq}	Equivalent Noise Level—Energy averaged noise level over the measurement time.
$L_{eq,1h}$	Equivalent (energy averaged) noise level over a one-hour period. Used to assess road traffic noise for some non-residential receivers.
$L_{eq,15h}$	Equivalent (energy averaged) noise level over the daytime period. Used to assess road traffic noise for residences.
$L_{eq,9h}$	Equivalent (energy averaged) noise level over the night time period. Used to assess road traffic noise for residences.
L_{max}	The maximum noise level measured during a period, using the fast time weighting on a sound level meter.
NCA	Noise Catchment Area
NCG	Noise Criteria Guideline (RMS, 2015)
Night-time	For road traffic noise, the night-time period is taken to be between 10 pm and 7 am.
NMG	Noise Mitigation Guideline (RMS, 2015)
NSW	New South Wales
OGA	Open Grade Asphalt
RBL	Rating Background Level – the medium value of the assessment background level for the period over all of the days measured.
REF	Review of Environmental Factors
RMS	Roads and Maritime Services
RNP	NSW Road Noise Policy (DECCW 2011).
Sound pressure level	The level of noise measured at a particular position and point in time.
SWTC	Scope of Works & Technical Criteria
Sound power level	Sound power level is a measure of the sound energy emitted by a source, measured in decibels referenced to Watts. It is a property of a particular source and is independent of distance from the source.

1. Introduction

The Sydney Gateway Road Project (Sydney Gateway) is being designed and constructed by the John Holland Seymour Whyte Joint Venture (JHSW).

This report has been prepared by Resonate Consultants on behalf of JHSW.

1.1. Project Description

Sydney Gateway is a NSW Government initiative to improve road and freight rail transport to and from Sydney (Kingsford Smith) Airport and Port Botany. Sydney Gateway, as part of an integrated transport network, will increase capacity and improve connections to the ports to assist with growth in passenger, freight and commuter traffic movements across the region.

Sydney Gateway comprises of three stages. However, only Stages 1 and 3 form part of the JHSW's Sydney Gateway project, which are:

- Stage 1 - International Terminal and Qantas Drive connection - a new high capacity road connection, linking the Sydney motorway network at St Peters Interchange with Sydney Airport's International Terminal and Qantas Drive.
- Stage 3 - Domestic Terminals access - an arterial road connection and flyover to Sydney Airport's Domestic Terminals. This includes improvements to existing roads, to relieve congestion and improve connectivity to Sydney Airport Domestic Terminals and towards Port Botany.

1.1.1. Stage 1

Stage 1 comprises a road connection linking the following infrastructure / facilities:

- New M5 and M4-M5 Link via St Peters Interchange at Canal Road
- Sydney Airport International Terminal (T1) via a new link through the former Tempe Tip to the existing Airport Drive
- Qantas Drive via a bridge over Alexandra Canal and Botany Rail Line, tying in with Stage 3 works.

The Stage 1 scope of works is shown in Figure 1.

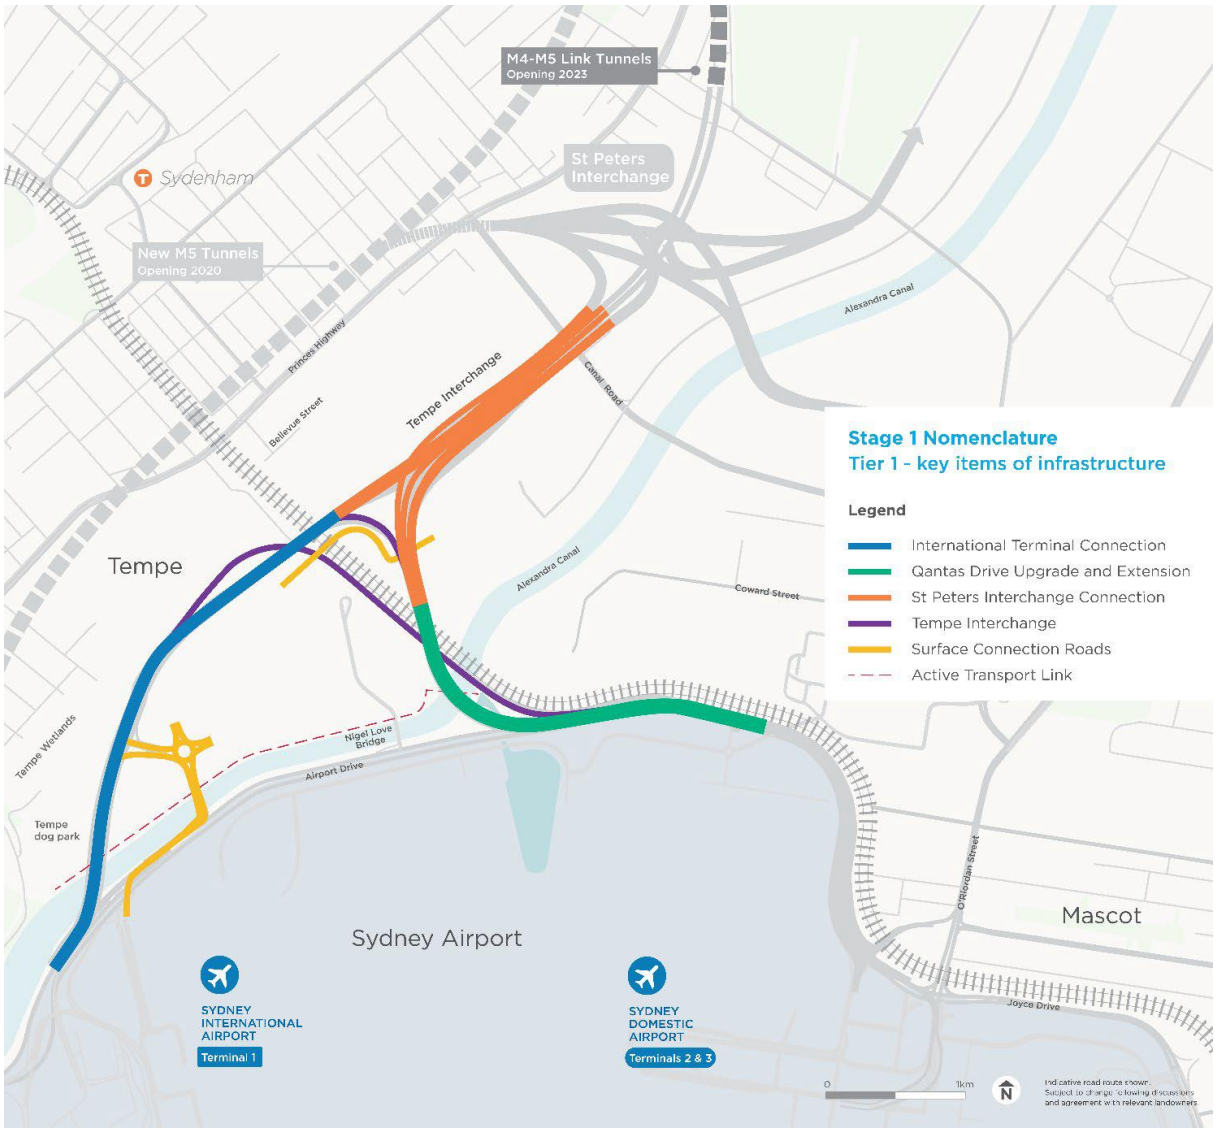

Figure 1: Stage 1 Schematic Layout Plan

1.1.2. Stage 3

Sydney Gateway Stage 3 comprises arterial road network improvements to relieve congestion and improve connectivity to Sydney Airport Domestic Terminals 2 and 3 (T2/T3), including:

- The widening of Qantas Drive from the interface with Stage 1 to the O'Riordan Street, Joyce Drive, Sir Reginald Ansett Drive intersection;
- Providing a grade separated, elevated viaduct access to T2/T3 from Qantas Drive to Sir Reginald Ansett Drive, allowing for the uninterrupted free flow from the Sydney Gateway Stage 1 to the T1/T2 Domestic terminals; and
- Realignment of the surrounding affected road network including:
  - The intersection between Seventh Street, Qantas Drive and Robey Street;
  - The intersection between Qantas Drive, Sir Reginald Ansett Drive, Joyce Drive and O'Riordan Street;
  - the intersection of Sir Reginald Ansett Drive and Ross Smith Avenue; and
  - Changes to the vehicle underpass on Shiers Avenue leading to the taxi carparking facility on Seventh Street.

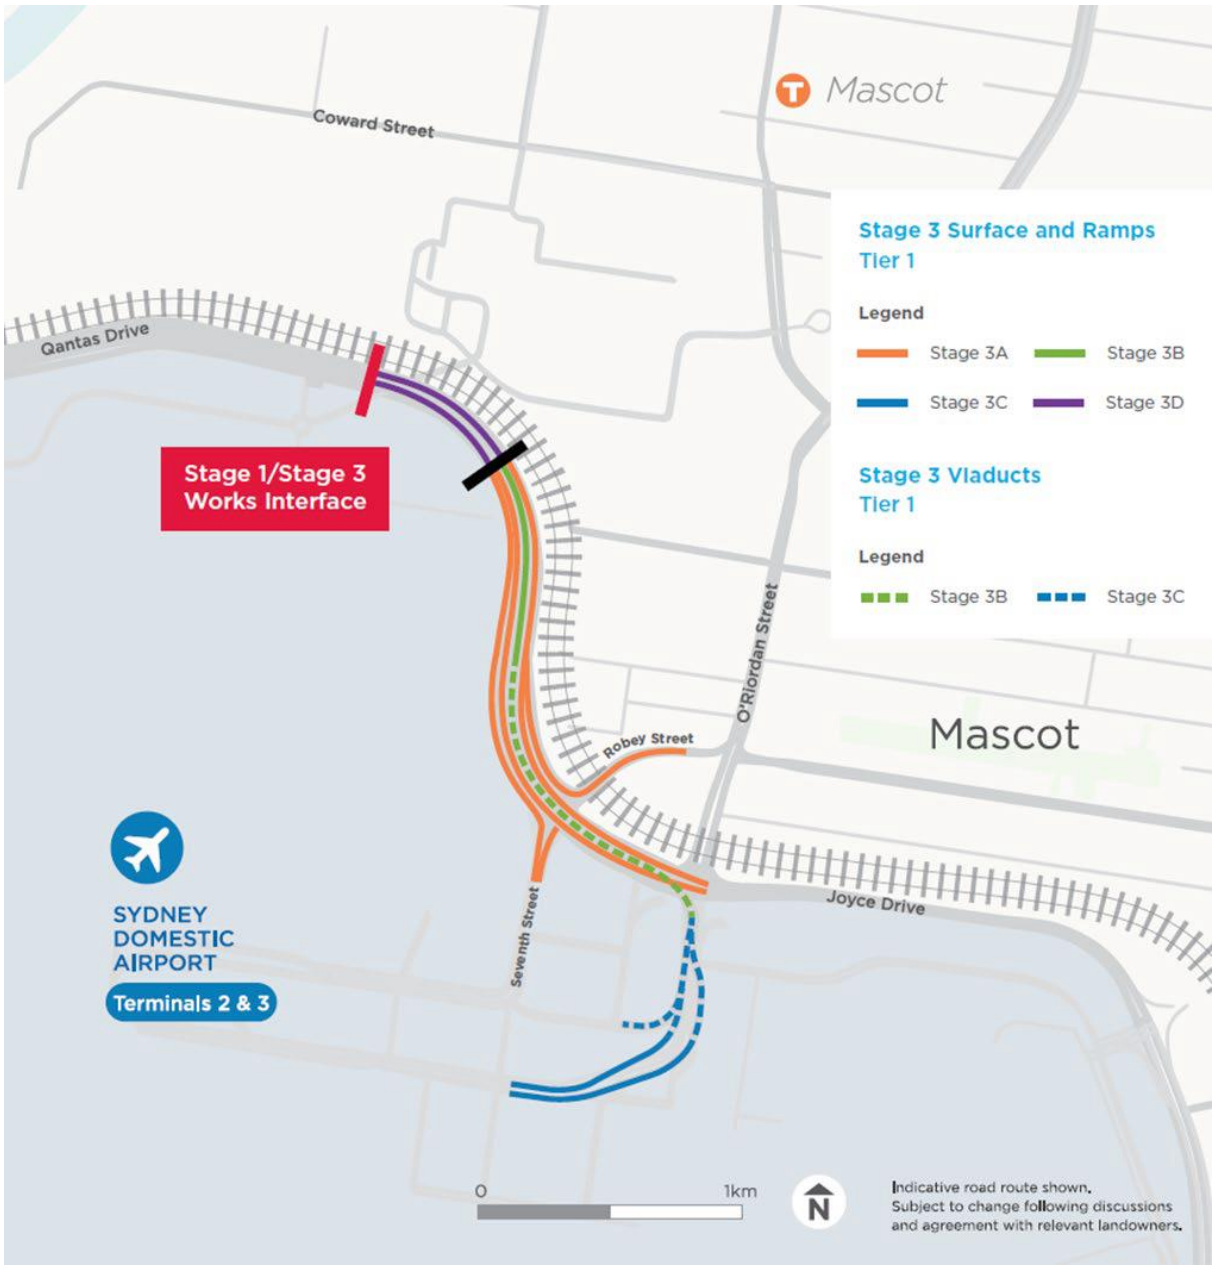

Figure 2: Stage 3 Schematic Layout Plan

1.2. Scope of the Design Lot

Operational road traffic noise emissions from the Project were assessed as part of the Environmental Impact Statement (EIS) / Major Development Plan (MDP). The EIS/MDP detailed operational noise mitigation measures to be included in the Project based on a Concept Design.

This report details the assessment of the Detailed Design to demonstrate that it complies with requirements relating to operational noise.

This Design Lot comprises the following:

- Design report.

1.3. Related Design Lots

This report covers the design of Design Lot NV-1040 only. The following Design Lots/Packages are related to this Design Lot but covered under separate submissions:

Table 1-1: Related Design Packages / Lots

Design Lot/Package No.	Description
RD-3425 RD-1310 RD-1320	Horizontal and Vertical alignments and earthworks (including interchanges and intersections)
MS-1620	Miscellaneous Structures (Noise Wall)

1.4. Reference Reports and Specifications

Please refer to Section 2.3 for a list of TfNSW operational noise modelling and assessment specifications and guidelines.

2. Design Criteria and Technical Requirements

2.1. Design Change Orders or Notices

Changes directed by TfNSW relevant to this Design Lot are listed in the table below:

Table 2-1: Change Order and Notices

Change order or notice reference	Design Element	Approved/Pending
LETTER-SGWS1-TFNSW-LETTER-000015-M4-M5 Additional Lane	M4-M5 link Additional Lane	Approved
LETTER-SGWS1-TFNSW-LETTER-000015-M4-M5 Additional Lane	Change to SAS	Approved
PDG Meeting Minutes No. 019 Week 29 19/05/2021 Item 5.1.2	Incident Response Bay	Approved
PDG Meeting Minutes No. 019 Week 29 19/05/2021 Item 5.1.2	Vehicle Crossover	Approved

Operational noise assessment criteria for the John Holland Seymour Whyte JV detailed design have been based on relevant policies and guidelines applicable in NSW (per the Environmental Documents), as well as:

- The Project's Scope of Works and Technical Criteria (SWTC)
- The EIS/MDP Technical Working Paper 2 – Noise and Vibration
- Sydney Gateway Road Project Response to Submissions Report
- Conditions of Approval for the Sydney Gateway Project SSI-9737
- Updated Mitigation Measures (UMM's) from the 'Response to submissions report'

2.2. SWTC Design Criteria Checklist

This Design Lot has been prepared in accordance with the Project Deed and the SWTC.

An SWTC compliance table for this Design Lot is provided in Appendix C.

2.3. Additional Standards, Codes and Technical Publications

This Design Lot has been designed in accordance with the relevant Codes and Standards referred to in SWTC D.3 and in accordance with the order of precedence set out in SWTC Clause 1.7.

Standards, Codes and Technical Publications not covered in the SWTC which have been used in the design of this Design Lot, are listed in the table below.

Table 2-2: Additional Standards, Codes and Technical Publications

Reference	Title
Policy	NSW Road Noise Policy (RNP), DECCW, March 2011
Guideline	Noise Criteria Guideline (NCG), RMS, 2015
Guideline	Noise Mitigation Guideline (NMG), RMS, 2015
Guideline	Model Validation Guideline (MVG), RMS, 2018
Guideline	Environmental Noise Management Manual (ENMM), RTA, 2001
Guideline	At-Receiver Noise Treatment Guideline, RMS, 2017

2.4. Environmental Criteria

All relevant environmental requirements are captured in the Environmental Compliance Register, which can be found in Appendix D. These include the Updated Mitigation Measures (UMMs) from the responses to submissions report.

The Conditions of Approval for the project include specific requirements relating to operational noise. These requirements are summarised in Table 2-3 together with where they are addressed within this report.

Table 2-3: Environmental Criteria Register

ID	Description	Report Reference
Conditions of Approval		
E13	A detailed land use survey must be undertaken to confirm sensitive receivers (including critical working areas such as flight simulators, operating theatres and precision laboratories) potentially exposed to construction noise and vibration, construction ground-borne noise and operational noise. The survey may be undertaken on a progressive basis but must be undertaken in any one area before the commencement of Work which generates construction or operational noise, vibration or ground-borne noise in that area. The results of the survey must be included in the Noise and Vibration CEMP Sub-plan.	Section 3.4, and Section 3.4.4.1
Condition E31 states that 'The Proponent must prepare an Operational Noise and Vibration Review (ONVR) to confirm noise and vibration control measures that would be implemented for the operation of the CSSI. The ONVR must be prepared in consultation with the relevant council(s), other relevant stakeholders and the community and must:'		
E31a	confirm the appropriate operational noise and vibration objectives and levels for surrounding development, including existing sensitive receivers	Section 3.4 and Appendix H
E31b	confirm the operational noise predictions based on the final design. Confirmation must be based on an appropriately calibrated noise model (which has incorporated noise monitoring, and concurrent traffic counting, where necessary for calibration purposes).	Section 3.4.2.3
E31c	confirm the operational noise and vibration impacts at adjoining development based on the final design of the CSSI, including operational daytime LAeq,15hour and night-time LAeq,9hour traffic noise contours	Section 3.4.2.4, Section 3.4.5 and Appendix E
E31d	review the suitability of the operational noise mitigation measures identified in the documents listed in Condition A1 and, where necessary, investigate and identify additional noise and vibration mitigation measures required to achieve the noise criteria outlined in the NSW Road Noise Policy (DECCW, 2011) including the timing of implementation	Section 3.4.3

ID	Description	Report Reference
E31e	detail the measures to seek feedback on the noise and vibration mitigation measures and the process as to how changes requested from directly affected landowners would be responded to; and	Refer to the Community Communication Strategy for the project for stakeholder engagement. Property inspection and scoping reports in relation to at-receiver noise treatment
E31f	procedures for the management of operational noise and vibration complaints.	Appendix I
E31	The ONVR is to be verified by a suitably qualified and experienced noise and vibration expert. The ONVR is to be undertaken at the Proponent's expense and submitted to the Planning Secretary for approval before the implementation of mitigation measures.	Appendix F
E31	The Proponent must implement the identified noise and vibration control measures prior to commencement of operation unless otherwise approved by the Planning Secretary.	Section 3.4.3.1
Condition E32 states that 'Operational noise mitigation measures for residences for residences identified, must be implemented within six (6) months of the commencement of construction at and in the vicinity of the impacted residence(s) to minimise construction noise impacts, and detailed in the Noise and Vibration CEMP Sub-plan for the CCSI, unless otherwise approved by the Planning Secretary in accordance with Condition E33. Additional mitigation must be prioritised so that those receivers with the largest likely exceedance of the noise management level receive the mitigation first.		
E32a	as eligible for consideration of additional mitigation in the Sydney Gateway Road Project Response to Submissions Report Appendix B – Memo Sydney Gateway Road Project Submissions Report Revised Operational Modelling Figure 6 Receivers Eligible for Consideration of Additional Mitigation; and	Section 3.4.2.4 and Appendix E14
E32b	as likely to exceed the noise management level in Condition E23(a)	Section 3.4.2.4 and Appendix E14
E33	Where the implementation of operational noise mitigation measures required by Condition E32 would not be implemented, the Proponent must submit to the Planning Secretary a report to justify this position. The report must detail the temporary measures that would be implemented to reduce construction noise impacts, until such time that the operational noise mitigation measures are implemented. The report must be endorsed by the ER and submitted to the Planning Secretary prior to the commencement of Work which would affect the identified residences. Note: Not having finalised detailed design is not sufficient justification for not implementing the proposed mitigation measures.	Section 3.4.4
Updated Mitigation Measures		
UMM's NV1	An operational noise mitigation strategy will be developed and implemented as part of the design, including investigating the need for low noise pavements, noise barriers and at-property mitigation.	Section 3.4.3 and Section 3.3.1.6
UMM's NV3	Operational noise and vibration mitigation measures will be identified during detailed design. Requirements for at-property noise treatments in properties identified as 'eligible' in the noise and vibration assessment will be reviewed. The implementation of treatments will be undertaken in accordance with the At-Receiver Noise Treatment Guideline (Roads and Maritime, 2017)	Section 3.4.3 and Section 3.4.4
UMM's NV4	Reasonable and feasible noise mitigation for receivers affected by operational noise from both the Botany Rail duplication and	Section 3.4.2.4.3

ID	Description	Report Reference
	the Sydney Gateway Road Project would be considered in consultation with ARTC.	

2.5. Design Software

The design software and version used in this design submission are listed in the following table.

Table 2-4: Design Software

Software	Version
SoundPLAN	Version 8.2

3. Design Development

3.1. Changes from Concept Design to Developed Concept Design

Table 3-1: Key changes from Concept Design to DCD

Location	Difference	Reason for the difference
Through Tempe Tip (MC80 CH900 – CH1460, MC90 CH1160 – CH1620)	Vertical alignment raised by approximately 1.7m	To minimise excavation in the tip for the CMC treatment
CH825 MCH0	Alignment shifted south west	Alignment brought within the project boundary

3.2. Changes from Developed Concept Design to Final Design

Table 3-2: Key changes from DCD to FDD

Location	Difference	Reason for the difference
CH675 to CH1150 MC30	An additional lane has been added from SPI M4 to Airport Drive. This has also resulted in the realignment of the SPI M5 to Airport Drive/Qantas Drive, and SPI M4 to Qantas Drive carriageways.	TfNSW direction
Northbound (MC80 CH1150 – CH1250)	Noise wall and noise mound reshaped	To suit urban design solution and noise wall requirements

The implementation of the DCD noise barrier would result in 18 sensitive receiver buildings in NCA 03 triggering for consideration of at-property treatment, while the FDD noise barrier design resulted in 14 sensitive receiver buildings in NCA03 triggering for consideration of at-property treatment. The FDD noise barrier design resulted in 4 less receiver buildings in NCA03 triggering for consideration of at-property treatment. See Table 3-3 for the comparison of triggered receiver buildings between the DC and FDD noise barrier designs.

Table 3-3: Comparison of DCD and FDD Triggered Receivers in NCA03

Number of receiver buildings that trigger for consideration of mitigation in NCA03	
DCD noise barrier design	FDD noise barrier design
18	14

3.3. Design Criteria

Operational noise assessment criteria for the John Holland Seymour Whyte JV detailed design have been based on relevant policies and guidelines applicable in NSW (per the Environmental Documents), as well as:

- The Project's Scope of Works and Technical Criteria (SWTC)
- The EIS/MDP Technical Working Paper 2 – Noise and Vibration
- Sydney Gateway Road Project Response to Submissions Report

3.3.1. Operational road traffic noise

The EIS/MDP for the Sydney Gateway Stage 1 and Stage 3 assessed the TfNSW Concept Design scheme against the requirements of the Road Noise Policy (RNP). The RNP, prepared by the NSW Department of Environment, Climate Change and Water (DECCW) and released in 2011, is the relevant policy to assess road traffic noise impacts from the Project.

The project assessment area generally aligns with the assessment area used during the noise modelling conducted for the EIS/MDP. The assessment area in this ONVR extends to a distance of 600 metres, to where the noise levels are dominated by other roads that are not being assessed as part of this project as defined in the RMS Noise Criteria Guideline (NCG). This assessment area is in line with NCG which specifies up to a maximum distance of 600 metres from the project works for urban areas.

The Site Plan and Sensitive Receiver Map is provided in Appendix E-1.

Noise criteria are assigned to sensitive receivers using the NCG. The NCG provides guidance on how to apply the RNP criteria. The RNP criteria relevant to this project are the 'New Road', 'Redeveloped Road' and 'Transition Zone' road traffic noise assessment criteria for:

- Residential land uses
- Educational buildings
- Places of worship
- Childcare facilities
- Aged care facilities.

A land-use survey has been conducted by JHSW to determine the existing sensitive land use as per CoA E13. This land-use survey has been used to update the EIS/MDP building types prior to being input into the noise model.

It should also be noted Hotels were classified as residential land use in the EIS/MDP as it is not known at that time if the Hotels in the assessment area consist of permanent residences. However, a property inspection recently conducted by JHSW has determined that there are no permanent residences[1] located in the Hotels. Therefore, Hotels are not classified as residential and will not be assessed in this FDD assessment.

[1] NSW Government Fair Trading advises that premises occupied for up to 3 months constitute as short-term rental accommodation. Therefore, any premises being occupied for more than 3 months is considered to be a place of permanent residence.

3.3.1.1. Residential land use assessment criteria

Road traffic noise assessment criteria for residential land uses relevant to the Project are presented below in Table 3-4. They are also relevant to aged care facilities.

Table 3-4: Noise criteria for residential receivers

Road Category	Type of project/land use	Assessment criteria dB(A)	
		Day (7 am – 10 pm)	Night (10 pm – 7 am)
Freeway/ arterial/ sub-arterial	'New Road' Existing residences affected by noise from new freeway / arterial / sub-arterial road corridors	$L_{eq,15h}$ 55 dB(A) (external)	$L_{eq,9h}$ 50 dB(A) (external)
	'Redeveloped Road' Existing residences affected by noise from redevelopment of existing freeway / arterial / sub-arterial roads	$L_{eq,15h}$ 60 dB(A) (external)	$L_{eq,9h}$ 55 dB(A) (external)
	'Transition Zone' Existing residences affected by both new roads and the redevelopment of existing freeway / arterial / sub-arterial roads in a Transition Zone	Between $L_{eq,15h}$ 55 – 60 dB(A) (external)	Between $L_{eq,9h}$ 50 – 55 dB(A) (external)
	'Relative Increase Criterion' Existing residences affected by increases in traffic noise of 12 dB(A) or more from new or redeveloped roads	Existing $L_{eq,15h}$ + 12 dB (external)	Existing $L_{eq,9h}$ + 12 dB (external)

The criteria apply at a distance of 1 m from the building facade. At this location, predictions and measurements are subject to a facade reflection factor. In accordance with the RNP, this facade reflection factor is taken to be +2.5 dB and is incorporated into the RNP criteria.

In order to determine if the 'New Road', 'Redeveloped Road' or 'Transition Zone' criteria apply, it is necessary to follow the procedures set out in the NCG.

A road is defined as 'New' where the road is a bypass or has been substantially realigned (outside the NCG tolerance band and/or existing grade).

The 'Redeveloped Road' criteria apply where there is not a substantial realignment of the pavement but where the traffic-carrying capacity of the road is being increased, such as by duplication.

In some instances, residences may be exposed to noise from new and redeveloped roads or different functional classes. In this instance, the proportion of noise from each road is used to establish transition zone criteria and provides a smooth change in noise criteria between adjacent residences.

The 'Relative Increase Criterion' comes into consideration in areas where a new road is developed in an area where there is negligible existing noise exposure. For this Project, the 'Relative Increase Criterion' has been considered but has not been found to be the controlling criterion for any situation due to the existing levels of road traffic noise in the environment.

The road traffic noise assessment criteria for each residential land use has been documented in the EIS/MDP based on the Project and on the existing conditions. To ensure consistency, the noise criteria defined within the EIS/MDP have been maintained within this assessment, noting that those criteria are consistent with both the RNP and NCG.

3.3.1.2. Acute noise levels

Where predicted noise levels at residential receivers are greater than or equal to 65 dB(A) $L_{eq,15h\ (daytime)}$ or 60 dB(A) $L_{eq,9h\ (night\text{-}time)}$, then road traffic noise levels are considered to be 'acute'. Residential receivers exposed to 'acute' noise levels as part of a road project are considered for mitigation regardless of the increase associated with the project, as long as the contribution from the road project is acute.

3.3.1.3. Cumulative limit

The cumulative limit applies when the total noise level in the design build year is 5 dB(A) or more above the NCG criterion. The cumulative limit does not apply where the project roads (new road or redeveloped section of road) adds less than 2 dB(A) to the total noise level at a given façade for the design build year.

3.3.1.4. Other land use assessment criteria

Road traffic noise assessment criteria for other types of noise-sensitive land uses are presented in Table 3-5.

Table 3-5: Noise criteria for other land uses

Existing sensitive land use	Assessment criteria, dB(A)		Additional considerations
	Day (7 am – 10 pm)	Night (10 pm – 7 am)	
School classrooms[1]	40 $L_{eq,1h}$ (internal)	-	Applies when in use only. In the case of buildings used for education and health, noise level criteria for spaces other than classrooms and wards may be obtained by interpolation from the 'maximum' levels shown in Australian Standard AS/NZS 2107:2000.
Hospital wards	35 $L_{eq,1h}$ (internal)	35 $L_{eq,1h}$ (internal)	
Places of worship	40 $L_{eq,1h}$ (internal)	40 $L_{eq,1h}$ (internal)	Applies when in use only. Areas outside of a place of worship may also warrant consideration. Refer to passive recreation area criteria.
Open space (active)	60 $L_{eq,15h}$ (internal)	-	Applies when in use only. Active recreation is characterised by sporting activities and activities that generate their own noise or focus for participants. Passive recreation is characterised by contemplative activities that generate little noise and where benefits may be compromised by noise intrusion (e.g. playing chess or reading).
Open space (passive)	55 $L_{eq,15h}$ (internal)	-	
Childcare facilities	35 $L_{eq,1h}$ (internal)	-	Applies to sleeping rooms when in use.
	40 $L_{eq,1h}$ (internal)	-	Applies to indoor play areas when in use.
	55 $L_{eq,1h}$ (internal)	-	Applies to outdoor play areas when in use. Free-field criterion (not subject to facade reflection factor).
Aged care facilities	-	-	Refer to residential land use criteria defined in Table 3-4.

Note 1: Qantas Flight Training Centre has been assessed as school classrooms, i.e. educational facility.

The receiver specific operational road traffic noise criteria are presented in Appendix E12, E13 and E15.

3.3.1.5. Sleep disturbance and maximum noise levels

The RNP includes a discussion of current knowledge regarding sleep disturbance due to road traffic noise, and states “despite intensive research, the triggers for and effects of sleep disturbance have not yet been conclusively determined.”

Current research does indicate that the main acoustic characteristic that influences sleep disturbance is the emergence (e.g. magnitude) and number of noisy events heard distinctly above the background level. The RNP suggests that intermittent noisy events, such as truck pass-bys, could be assessed on the basis of emergence events determined as the difference between L_{max} levels and the steadier L_{eq} or L_{90} levels.

The RNP refers to Practice Note iii of the Environmental Noise Management Manual (ENMM, RTA, 2001), which suggests that the $L_{eq,9h}$ road traffic noise guidelines should sufficiently account for sleep disturbance impacts except where both of the following conditions are met:

- the L_{max} emergence over the ambient Leq,1h is greater than 15 dB(A) and
- the L_{max} level is greater than 65 dB(A).

In these cases, additional consideration of sleep disturbance impacts may be required.

3.3.1.6. Assessing eligibility for consideration of noise mitigation measures

The Noise Mitigation Guideline (NMG) provides guidance in managing and controlling road traffic generated noise and describes the principles to be applied when reviewing noise mitigation. The NMG recognises that the criteria recommended by the NCG are not always practicable and that it is not always feasible or reasonable to expect that they should be achieved.

The NMG notes that the most effective way of minimising noise from vehicles and traffic is to control vehicle noise at the source. Where source measures are not practical, or do not provide sufficient noise reduction, additional methods are required to reduce levels to within acceptable margins. Such additional methods may include the use of quieter pavement surfaces, noise barriers and/or consideration of at-property treatment.

The NMG provides three triggers where a receiver may qualify for consideration of noise mitigation (beyond the adoption of road design and traffic management measures). These are:

- The predicted Build noise level exceeds the NCG controlling criterion and the noise level increase due to the project (i.e. the noise predictions for the Build minus the No Build) is greater than 2 dB(A), or;
- The predicted Build noise level is 5 dB(A) or more above the criteria (exceeds the cumulative limit) and the receiver is significantly influenced by proposal road noise, regardless of the incremental impact of the project, or;
- The noise level contribution from the project is acute (daytime $L_{Aeq(15hour)}$ 65 dB(A) or higher, or night-time $L_{Aeq(9hour)}$ 60 dB(A) or higher) then it qualifies for consideration of noise mitigation even if noise levels are dominated by another road.

The eligibility of receivers for consideration of additional noise mitigation is determined before the benefit of additional noise mitigation (quieter pavement and noise barriers) is included. The requirement for the proposal is to provide reasonable and feasible additional mitigation for these eligible receivers to meet the NCG controlling criterion. If the NCG criterion cannot be satisfied with quieter pavement and noise barriers, then the receiver may be eligible for consideration of at-property treatment.

The Road Noise Policy includes a review of internal sleep arousal research but does not provide noise goals. The RNP concludes that there appears to be insufficient evidence to set new indicators for potential sleep disturbance due to road traffic noise. Guidance for considering sleep disturbance due to maximum noise levels is provided in Practice Note iii of

the Environmental Noise Management Manual (RTA 2001). The sleep disturbance assessment does not influence the degree of mitigation required but is used to rank and prioritise design options and noise mitigation strategies.

For the Sydney Gateway Project, locations at which increases in L_{Aeq} noise levels are predicted would correlate with potential increases in maximum noise levels. This is typically in the areas where receivers would be located closer or adjacent to new sections of road. The noise mitigation strategy is detailed within Section 3.4.3.

3.3.2. Ground-based airport noise

Whilst designing for ground-based airport noise level changes is not within scope, the criteria and considerations are included for completeness.

The project has the potential to alter ground-based noise from Sydney Airport. Noise from ground-based activities is made by a number of sources, including:

- Construction works
- Road traffic
- Taxiing aircraft
- Ground running of aircraft engines
- Operation of aircraft auxiliary power units (APUs).

Sydney Airport is on Commonwealth-land leased by Sydney Airport Corporation and the relevant noise emission requirements are contained in the Airports (Environmental Protection) Regulations 1997. The regulations do not contain specific criteria for ground-based airport noise but instead establish a system of regulation for activities that generate or have potential to generate excessive noise. Whether noise is excessive or not is generally determined by an airport environmental officer, with consideration of features such as the receivers which are affected, the volume of the noise, the time of day it occurs, the duration and the existing background noise levels in the area.

In the absence of any defined numerical criteria, the EIS/MDP has referenced the NSW EPA *Noise Policy for Industry* (NPI) for assessing ground-based airport noise impacts which relates to the Sydney Gateway project.

3.3.2.1. Noise Policy for Industry

The NPI was released in 2017 and sets out the NSW Environment Protection Authority (EPA)'s requirements for the assessment and management of noise from industry in NSW.

The NPI describes 'trigger levels' which indicate the noise level at which feasible and reasonable noise management measures should be considered. Two forms of noise criteria are provided – one to account for 'intrusive' noise impacts and one to protect the 'amenity' of particular land uses.

- The intrusiveness of an industrial noise source is generally considered acceptable if the L_{Aeq} noise level of the source, measured over a period of 15 minutes, does not exceed the background noise level by more than 5 dB. Intrusive noise levels are only applied to residential receivers. For other receiver types, only the amenity levels apply.
- To limit continual increases in noise levels from the use of the intrusiveness level alone, the ambient noise level within an area from all industrial sources should remain below the recommended amenity levels specified in the NPI for that particular land use.

For potential aircraft related ground-based noise impacts near to the airport, the NPI intrusiveness criterion is considered appropriate.

3.3.2.2. Project specific criteria

The intrusiveness-based noise trigger levels for aircraft related ground-based noise from Sydney Airport are shown in Table 3-6.

The 'standard' triggers levels are provided for general aircraft related activities, such as taxiing. When engine run ups occur, they typically only last for a short period and where noisy events are not continuous, the NPI allows adjustment of the trigger levels due to the infrequent nature of the noise. The criteria for 'engine run ups' has therefore been increased by 5 dB.

Table 3-6: Project Noise Trigger Levels – Aircraft Related Ground-based Noise[1]

NCA	Period	Measured noise level – dB(A)		Project trigger noise level Leq(15minute) – dB(A)	
		RBL[2]	Leq(period)	Standard	Engine run up[4]
NCA03	Daytime	42	61	47	52
	Evening	40	60	45	50
	Night-time	38	53	43	48
NCA06 and NCA08[3]	Daytime	60	68	65	70
	Evening	58	66	63	68
	Night-time	53	64	58	63

Note 1: Table extracted from Table 22 of the EIS/MDP

Note 2: RBL = Rating Background Level.

Note 3: The noise monitoring at this location was affected by nearby construction works during the monitoring period. The background levels and criteria for this area should be reviewed and confirmed during detailed design.

Note 4: Engine ground running would likely occur infrequently, especially during the night-time, and high power running would not occur every night.

The NPI also contains amenity criteria for 'other sensitive' receivers and the relevant amenity noise levels for receivers that would potentially be affected by altered ground-based noise from Sydney Airport are provided in Table 3-7.

Table 3-7: NPI amenity noise levels for other sensitive receivers

Receiver type	Noise amenity area	Time of day	Recommended amenity noise level – dB(A)	
			Standard[1]	Engine run up[2]
Hotel	Urban	Daytime	68 (60+5+3)	73
		Evening	58 (50+5+3)	63
		Night-time	53 (45+5+3)	58
School classroom – internal (Flight Training Centre)	All	Noisiest 1-hour period when in use	35	40

Note 1: Set as being 5 dB above the recommend urban amenity noise level for a residence plus 3 dB to convert to a 15 minute level, as per the procedures in the NPI.

Note 2: Engine ground running would likely occur infrequently, especially during the night-time, and high power running would not occur every night.

3.4. Design Details

Operational road traffic noise emissions from the Project were assessed as part of the EIS/MDP. The EIS/MDP detailed operational noise mitigation measures to be included in the Project based on a Concept Design.

This report details the assessment of the Detailed Design to demonstrate that it complies with requirements relating to operational noise.

3.4.1. Prescribed road traffic modelling parameters

The prescribed road traffic noise modelling parameters as set out in the EIS/MDP Noise and Vibration Technical Working Paper are provided in Table 3-8.

Table 3-8: Prescribed road traffic noise modelling parameters

Parameter	Detailed Design noise model
Modelling Software	▪ SoundPLAN version 8.2
Vehicle speeds	▪ Use the speeds of years 2026 and 2036 identified in Table 32 of the EIS/MDP TWP 2 - Noise and Vibration
Traffic volumes Year 2026 (at opening)	▪ Use the traffic volumes for Year 2026 as identified in Appendix E of the EIS/MDP TWP 2 - Noise and Vibration
Traffic volumes Year 2036 (10 years after opening)	▪ Use the traffic volumes for Year 2036 as identified in Appendix E of the EISMDP TWP 2 - Noise and Vibration
Road traffic noise prediction algorithm 'Appropriate adjustments for NSW noise descriptors'	▪ Calculation of Road Traffic Noise (CoRTN) 1988 ▪ The 15-hour and 9-hour traffic flows have been divided by 15 and 9 respectively to provide hourly levels.
Three source heights	▪ 0.5 m above ground for car exhausts, car engines, car tyres (single source string) ▪ 0.5 m above ground for truck tyres ▪ 1.5 m above ground for truck engines ▪ 3.6 m above ground truck exhausts
Source truck emissions	▪ -5.4 dB for truck tyres ▪ -2.4 dB for truck engines ▪ -8.5 dB for truck exhausts
Pavement corrections	▪ 0 dB(A) for dense graded asphalt (has been applied to all road strings)
Receiver building heights	▪ 1.5 m above ground for ground floor receiver ▪ 4.5 m above ground for first floor receiver ▪ 1.5 m above floor level for other levels
Ground absorption factor	▪ 50% (i.e. an absorption coefficient of 0.5) for residential areas ▪ 0% (i.e. an absorption coefficient of 0) for water
General Corrections	▪ Facade Reflection +2.5 dB ▪ L_{A10} to L_{Aeq} -3 dB ▪ $L_{Aeq\ (15hour)}$ to $L_{Aeq\ (1\ hour)}$+ 2 dB ▪ $L_{Aeq\ (9hour)}$ to $L_{Aeq\ (1\ hour)}$+ 3.6 dB
Model validation	▪ Refer to validation in Section 3.4.2.3.
ARRB Australian condition correction	▪ -1.7 dB(A) standard correction at 1 m from façade during daytime ▪ -0.7 standard correction at free-field locations during the daytime
Property boundary fences	▪ Not included in the model

3.4.2. John Holland Seymour Whyte JV Detailed Design

3.4.2.1. No-Build Noise Models

A noise model of the existing road alignment (i.e. the 'No Build' scenario) was developed based on the:

- Provided EIS/MDP noise model (*reference files: Sydney Gateway noise model and buildings data.zip*).

The 'No Build' road traffic noise levels were predicted for each noise sensitive receiver for both the 2026 and 2036 assessment years.

3.4.2.2. Build Noise Models.

The Detailed Design noise models have been developed based on:

- John Holland Seymour Whyte JV road alignment models as follows:
    - Zone 1: (SGWS1-JHSW-1000-RW-M3D-000010) issued 23 April 2021
    - Zone 2: (SGWS1-JHSW-2000-RW-M3D-000010) issued 23 April 2021
    - Zone 3: (SGWS1-JHSW-3000-RW-M3D-000010 and SGWS1-JHSW-3000-RW-M3D-000020) issued 23 April 2021

The above is part of the Substantial Detailed Design (SDD) and subsequent changes are not expected to impact the noise modelling and assessment.

3.4.2.3. Noise model validation

Concurrent road traffic noise monitoring and traffic counting was conducted as part of the EIS/MDP in October, 2018. The precise noise measurement locations and traffic volumes were provided by TfNSW in response to *RFI - SG-20-RES-0000-NV-RFI- 0002-01 - Traffic Volumes for Noise Modelling*. The measured traffic volumes and noise measurement locations were provided in Shapefile format.

Due to the COVID pandemic, there are currently not as many vehicles on the roads and aircraft fly-bys in the project assessment area, and Sydney airport is currently not operating at capacity. Therefore, the current noise environment may not be a true reflection of what it was before the COVID pandemic. Based on this understanding, the EIS/MDP noise monitoring and traffic counting that were conducted before the COVID pandemic are considered to be the most relevant and appropriate for this FDD assessment.

A noise model was developed representative of the existing road configuration. The measurement points were implemented as receiver locations and the measured traffic volumes were implemented within the road source strings. The validation noise model implemented the parameters as described in Table 3-8.

The outcome of the noise model validation is provided in Table 3-9.

Table 3-9: Noise model validation – comparison of measured and predicted noise models

Location	Noise Level dB(A)					
	Daytime $L_{Aeq,15\ hour}$ (7am-10pm)			Night-time $L_{Aeq,9\ hour}$ (10pm to 7am)		
	Measured	Predicted	Difference	Measured	Predicted	Difference
L01	75.1	75.8	0.7	72.1	71.9	-0.2
L02	74.9	75.8	0.9	71.9	73.7	1.8
L04	63.6[1]	61.4	Note 1	58.1	58.8	0.7
L05	66.5	67.1	0.6	63.1	63.9	0.8
L06	72.5	74.1	1.6	70.5	72.1	1.6
Median			0.8	Median		0.8

Note 1: The measured daytime noise data at this location was influenced by other sources of noise such as sporting events or maintenance works at Tempe Recreation Reserve. The daytime period has therefore been excluded from the validation.

The noise model validation measurement locations are presented in Figure 3 and Figure 4. The noise model validation measurement locations are considered appropriate for use in validating the accuracy of the noise model on the basis that they generally meet the recommendations of the RMS Noise Model Validation Guideline for the following reasons:

- The difference between the measured daytime and night-time noise levels were similar to the differences predicted by the noise model.
- Noise logging locations provided a representative measurement of receiver noise levels and the impact of the project.
- Noise loggers were placed at a range of distances and locations to evaluate propagation loss throughout the range of project impact.
- Some noise loggers were not influenced by residential fences.

The Roads and Maritime Environmental Noise Management Manual (ENMM) notes that “it should be recognised that noise prediction modelling has some accuracy limitations and will commonly produce acceptable errors of around 2 dBA”.

The above predictions show that the noise model is generally slightly conservative at the validation sites and the difference between the measured and predicted noise levels is within the anticipated accuracy at all locations. On this basis, the model is considered to be performing as expected and is valid for predicting road traffic noise levels for the project.

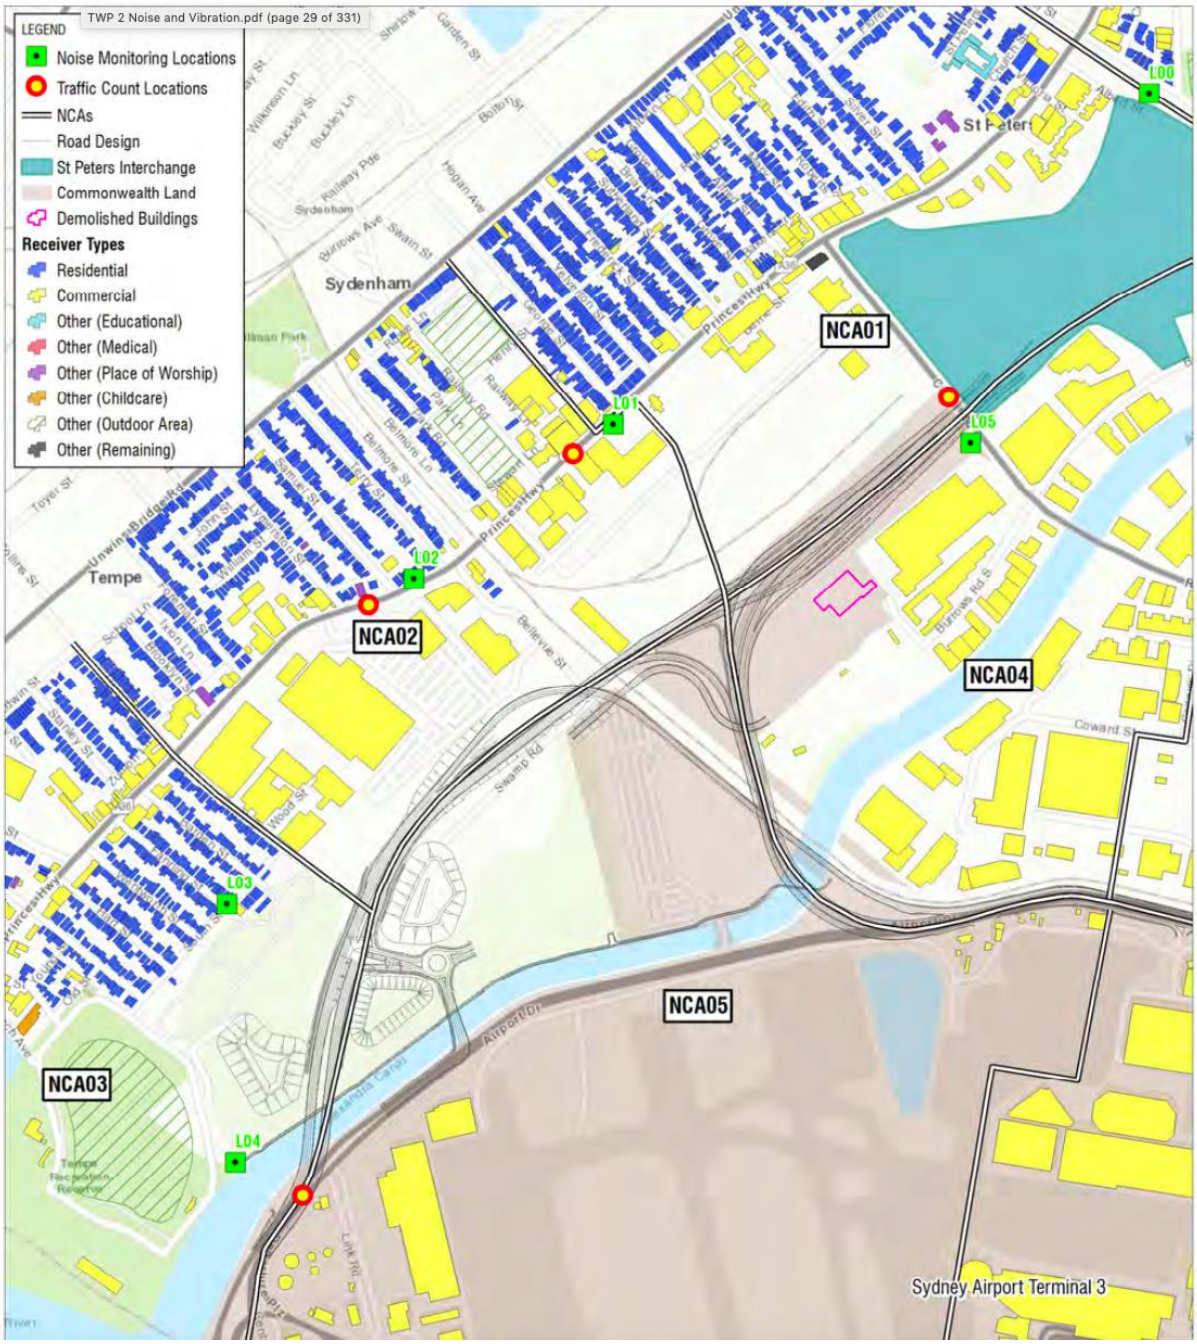

Figure 3: Noise model validation locations
(reference: *EIS/MDP Technical Working Paper 2 – Noise and Vibration*)

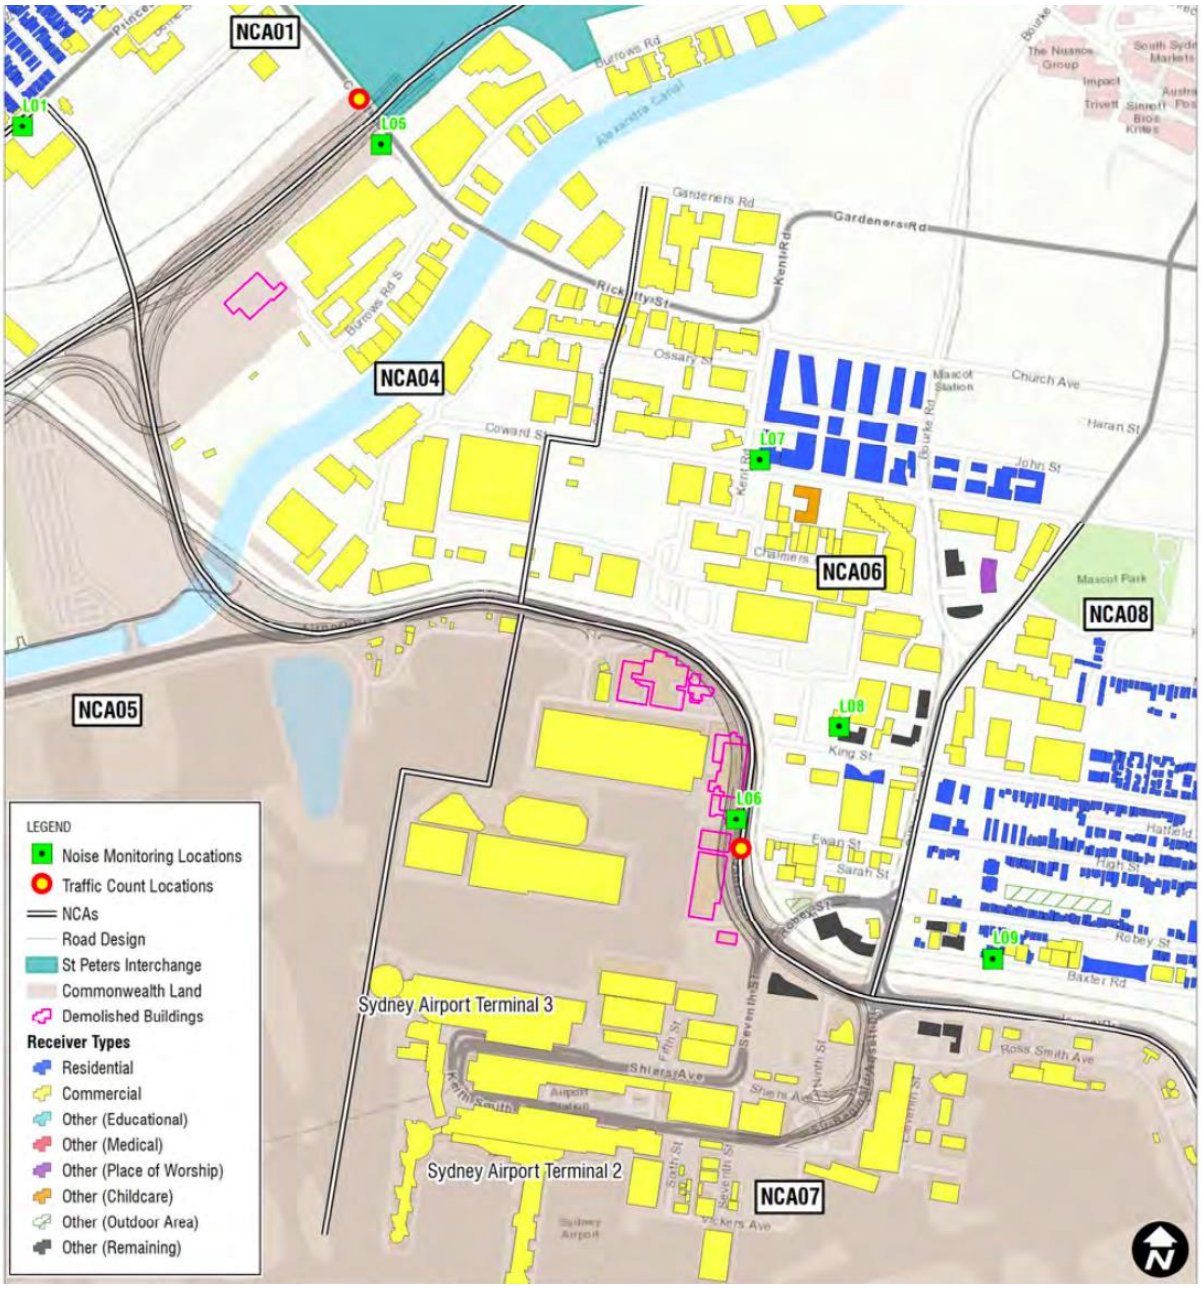

Figure 4: Noise model validation locations
(reference: *EIS/MDP Technical Working Paper 2 – Noise and Vibration*)

3.4.2.4. Predicted Noise Levels

In accordance with Condition of Approval E31c, the operational noise and vibration impacts have been confirmed at adjoining development based on the final design of the CSSI as described below. Condition of Approval E31c also requires that operational daytime $L_{Aeq(15hour)}$ and night-time $L_{Aeq(9hour)}$ traffic noise contours to be calculated and these are provided in Appendix E.

Road traffic noise levels for each potentially affected sensitive receiver have been predicted and assessed against the established noise criteria.

The sensitive receivers that qualify for consideration of additional noise mitigation in the form of at-property noise treatments are presented graphically in Appendix E2 prior to the implementation of the noise barrier as described in Section 3.4.3.3.

Free-field noise contours for the Year of Opening (2026) and Design Year (2036) for the daytime and night-time periods (without the noise barrier) are presented in Appendix E3.

Detailed noise level prediction results tables for each façade of each potentially affected noise sensitive receiver is provided in Appendix E6.

The total number of buildings qualifying for consideration of additional noise mitigation based on the EIS/MDP, Submissions Report assessment and the JHSW FDD is summarised in Table 3-10.

Table 3-10: Summary of Receivers Eligible for Consideration of Additional Mitigation

Context	Number of Exceedances Residential and other sensitive buildings (without noise mound/barrier)	Number of Exceedances Residential and other sensitive buildings (including noise mound/barrier)
EIS/MDP	246	Data not reported
Submissions Report	231	Data not reported
FDD	233	153

Based on the FDD noise assessment the list of receivers eligible for consideration of at-property noise treatment when the noise barrier is implemented is provided in Table 3-11 below.

Table 3-11: Receivers eligible for consideration of at-property noise treatment

It must be noted that the receiver located at 297 King Street, Mascot is the proposed New Qantas Flight Training Centre which is classed as an educational land use. It is understood that the development of this site is currently on hold.

Additionally, predicted road traffic noise levels with the FDD alignment are considered to comply with the requirements of the RNP and NCG and requirements of the Deed, subject to the inclusion of the noise mitigation measures detailed within Section 3.4.3.

3.4.2.4.1. Comment on Year of Opening (2026) Scenario

The EIS/MDP stated that '*The impacts from the project are predicted to be greatest in the 2036 future design scenario due to this timeframe generally having higher traffic volumes than in 2026 at project opening. Receivers are generally most affected by the project in the night-time period in 2036 and this scenario is considered to control the assessment in terms of determining the worst-case impacts and requirements for mitigation*.'

The analysis of the noise level predictions for the Year of Opening (2026) Scenario has indicated that an additional 45 buildings located on King Street, Mascot would qualify for additional noise mitigation if this scenario was considered in determining impacts. A review of the road traffic volumes as provided by TfNSW for this street indicates that there is significant increase in road traffic volumes during the night-time period only. This appears to be atypical when compared to most other roads influenced by the project. It is likely that the increase in traffic would be attributed to other road infrastructure projects reaching completion ahead of Sydney Gateway. These receivers are included in Table 3-10 and Table 3-11, and are shown on Appendix E10 and Appendix E11.

3.4.2.4.2. Assessment of Hotels

There are a number of hotels surrounding the project alignment. These buildings are treated as commercial receivers with no permanent residents[2] and are not eligible for additional noise mitigation. These receivers are not included in Table 3-10.

That said, it is understood that an assessment of the existing facades of the hotels in the project assessment area was conducted during the EIS/MDP ('*Hotel Inspections and Façade Performance Predictions*' memorandum, dated 14 August 2019, prepared by SLR Consulting). The assessment concluded that the existing external facades provide relatively

[2] NSW Government Fair Trading advises that the occupation of a residential premises for up to 3 months constitute as short-term rental accommodation. Therefore, any premises being occupied for more than 3 months is considered to be a place of permanent residence.

good acoustic ratings to adequately attenuate external noise sources to appropriate internal noise levels within the hotels.

3.4.2.4.3. Port Botany Duplication (Cumulative Impacts)

A review of the Botany Rail Duplication Project (Stage 2) EIS/MDP has shown that approximately 14 sensitive receivers have overlapping at-property acoustic treatment requirements (refer to Table 3-12). The application of the at-property acoustic treatments at these locations will be coordinated with the Stage 2 contractor and TfNSW. It should be noted that the Stage 2 project is at preferred tenderer stage and as such does not have a finalised design. JHSW are progressing implementation of at property noise treatment based on the assessment completed from the Sydney Gateway Project. If additional noise impacts are modelled by the Stage 2 Contractor then additional mitigation may be required to be implemented and this will be completed at a later date by the Stage 2 Contractor.

Table 3-12: Overlapping at-property noise treatment receivers

3.4.3. Operational noise mitigation

3.4.3.1. FDD

This section details noise mitigation measures included as part of the John Holland Seymour Whyte JV FDD Alignment. CoA E31 states that the Proponent must implement the identified noise and vibration control measures prior to commencement of operation unless otherwise approved by the Planning Secretary.

3.4.3.2. Road design measures

The type of road surface can significantly affect road traffic noise levels at affected receivers. Concrete pavements tend to be the noisiest with low noise pavements such as open grade asphalt (OGA) being the quietest.

Low noise pavements are the preferred form of noise mitigation as they reduce source noise levels which benefits both outside areas and internal spaces.

Road pavement surfaces and textures must meet a number of criteria besides noise performance including structural integrity, skid resistance, water shedding, maintenance requirements and design life.

Low noise pavements are generally most effective where vehicle speeds are high, such as on motorways, and less effective where traffic speeds are slower or where traffic is required to slow down or stop. It is noted that the Sydney Gateway Road Project would have a speed limit of 70 km/h and would have a signalised intersection which would reduce the effectiveness of low noise pavements.

The noise assessment includes the use of quieter noise pavement in the form of dense graded asphalt (DGA) across the extent of the project.

Whilst TfNSW's technical requirements for the project do not specifically require Low Noise treatments for posted speeds below 80 km/h (as in the case of this project), alternative wearing courses were considered for pavements for Sydney Gateway. Alternative options included stone mastic asphalt (SMA) and OGA wearing courses.

TfNSW Noise Model Validation Guidelines (v1.1 May 2018, Table 3) indicate that the relative lifetime noise performance of DGA is better than OGA. Furthermore, DGA provides approximately 25% improved life cycle performance due to longer life expectations of DGA. Whilst SMA can provide incremental noise benefits, it's social/environmental impact (by way of increased carbon footprint) led to its exclusion . Due to the use of specialised and elevated levels of bitumen, both SMA and OGA are higher cost treatments than the selected DGA.

As a result SMA and OGA were not adopted in the design.

3.4.3.3. Noise barriers

Noise barriers were considered in three locations as part of the EIS/MDP noise and vibration assessment. The detailed design assessment found that one noise barrier (NW02) was considered reasonable and feasible for the receivers located in NCA03, this agrees with the outcomes of the EIS/MDP noise and vibration assessment. The reasonable and feasible considerations included:

- The noise barrier provides at least 5 dB insertion loss at representative receivers.
- The noise barrier results in residual criteria exceedances at less than one third of eligible receivers. The residual criteria exceedances within NCA03 was 30 for the EIS/MDP and 15 for the FDD, which represents a relative improvement.
- An extensive urban design process was followed with feedback sought from the community and relevant stakeholders.

NW02 comprises a combined mound / wall height of 5 metres above road level. An image of the noise mound/wall arrangement is presented in Figure 5. The arrangement is described as follows:

- The northern section (north of the overlap) comprises a 5m high noise mound terminating in a noise wall 5m in height.
- The central overlapping section is 5m high and includes and overlap of approximately three times the distance between the overlapping segments.
- The southern section (south of the overlap) comprises a noise mound topped with a noise wall in order to achieve the total height of 5m.

The location of NW02 is shown on the plan in Appendix E4 together with residual receiver locations eligible for additional noise mitigation after the implementation of the noise barrier.

Free-field noise contours for the Design Year (2036) for the daytime and night-time periods (including the noise barrier) are presented in Appendix E5.

Detailed noise level prediction results tables for each façade of each potentially affected noise sensitive receiver is provided in Appendix E6.

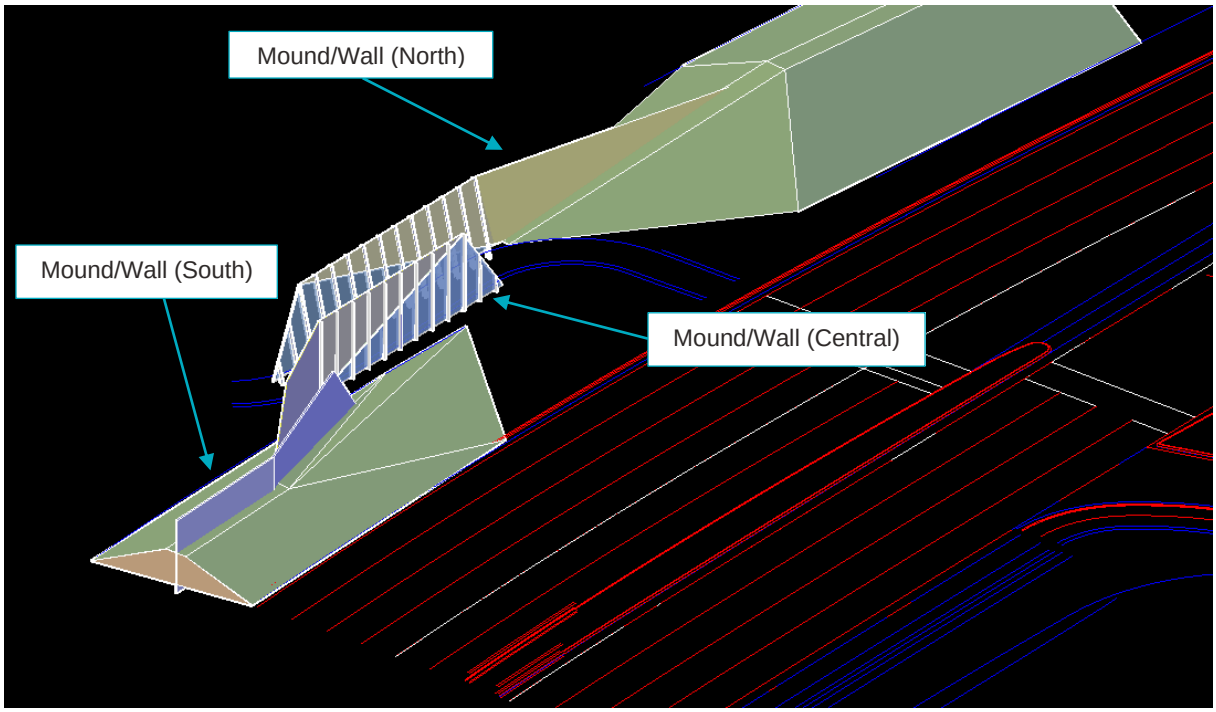

Figure 5: Noise mound / wall arrangement

3.4.3.3.1. Noise barrier overlap discussion

- The RMS Noise Wall Guideline 2016 requires an overlap of three to four times the distance between overlapping segments.
- The design achieves an overlap of three times the separating distance at the surface level opening of the two noise walls and 2.6 times the separating distance at the top of the two noise walls due to the vertical slant on the middle wall.
- It is noted that the SWTC requires an overlap of four times the separating distance. However, the design achieves the intent of the RMS Noise Wall Guideline 2016. Refinement was required through the design process as additional constraints were defined as follows:
  - Project boundary.
  - Location of the pedestrian crossing which is governed by the intersection layout and the project boundary on the at the New Link Road roundabout.
  - The combination of noise wall and mound design is a key feature of JHSW's proposal to meet urban design outcomes.
  - Drainage channel required along the boundary which involves a culvert crossing under the shared path.
  - The aforementioned factors were detailed in an RFI to TfNSW (JHSW RFI document reference: SG-20-AAJ-2000-RD-RFI-0058-01 – Noise Wall Overlap).
  - It should be noted that the residual number of exceeding receivers (at ground and first floor only per the RMS Noise Mitigation Guideline) in NCA03 was 30 for the EIS/MDP and 15 for the FDD, which represents a relative improvement.

The side by side noise contours in Figure 6 demonstrate that there is no degradation of noise barrier performance at the location of the overlapping segments.

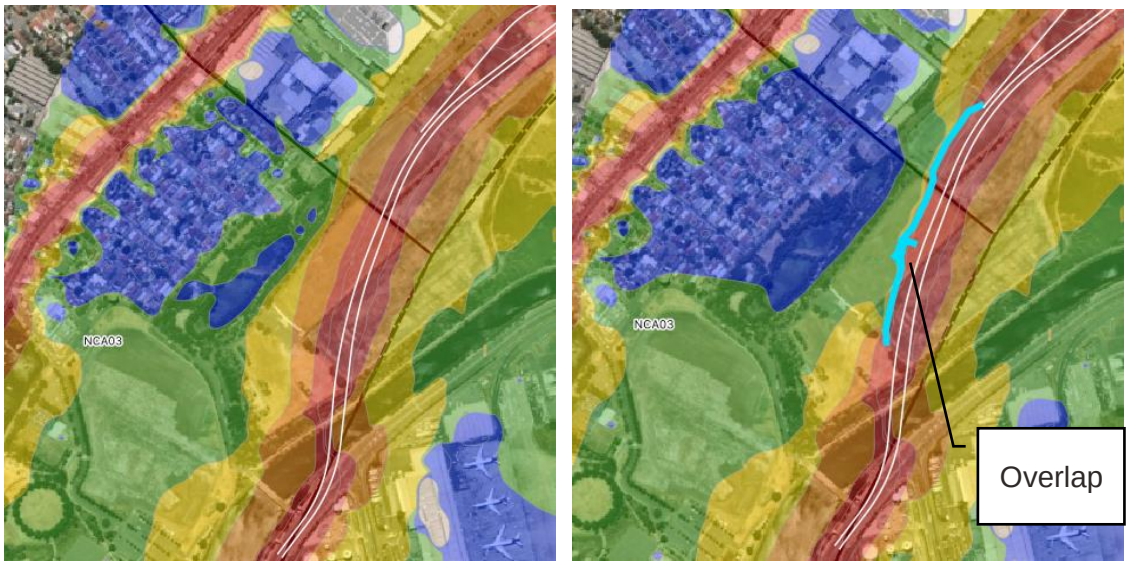

Figure 6: Comparison of noise contours with and without noise barriers

3.4.4. At-Property Acoustic Treatments

At-property treatments are considered where sensitive receivers remain above the NCG criteria after all other noise mitigation measures have been explored. The NCG's noise criteria are external noise goals, and building treatment only reduces noise levels inside a dwelling. Therefore, any architectural treatments would be designed to achieve internal noise levels had the project complied with the NCG criteria externally.

At-property treatments are generally limited to acoustic treatment of the building elements and the installation of acoustic screen walls close to the receiver where they also protect outdoor living spaces. Architectural treatments have been recommended at residual criteria exceedance locations behind noise barriers or at locations where source or path mitigation measures did not allow for the compliance with the relevant criteria to be achieved.

At-property acoustic treatments will be considered at the following receivers after the implementation of the noise barrier:

- Residential Buildings: 142
- Non-residential Buildings: 11 (this includes one open space passive in NCA06)
- Total: 153

It should be noted that the aforementioned total includes the receivers located on King Street, Mascot.

Some receivers may have sufficient existing noise mitigation in the form of architectural noise treatments due to un-related projects such as the M5 road project and treatments associated with Sydney Airport. These properties would still be inspected as part of the Sydney Gateway Project, if required, to determine the applicability and suitability of any existing at-property acoustic treatments.

At-receiver acoustic treatments will be scoped in accordance with the At-receiver Noise Treatment Guideline.

The At-Receiver Noise Treatment Guideline recommends treatments that may comprise of the following:

- Ventilation systems that meet Building Code of Australia fresh air requirements with the windows and doors shut;
- Upgraded windows, glazing and solid core doors on the exposed facades of substantial structures on (e.g. masonry or insulated board cladding each with sealed underfloor);

- Upgraded window or door seals;
- The sealing of wall vents;
- The sealing of the underfloor below the bearers and appropriately treating sub-floors ventilation;
- Roof insulation; and
- The sealing of eaves

The applicable architectural treatments per package type would be as per “Deemed to comply mitigation packages (Based on Rw +Ctr)” of the At-Receiver Noise Treatment Guideline (the table describing the treatment packages is attached as Appendix H to this report for reference).

The sensitive receivers that qualify for consideration of additional noise mitigation in the form of at-property noise treatments are presented graphically in Appendix E4.

Generally, the outcomes of the FDD are consistent with the EIS/MDP. The key differences occur in:

- NCA03 where a number of marginal exceedances with the EIS/MDP no longer exceed in the FDD due to project alignment and noise barrier design development.
- NCA08 where year of opening traffic volumes resulted in additional exceedances on King Street, Mascot in the FDD. It appears that the receivers on King Street, Mascot were not considered in the EIS/MDP.
- There were relatively minor variances in the number of exceedances between the EIS/MDP and the FDD in the other NCAs.

A separate package of work to produce detailed property inspection and scoping reports for eligible sensitive receivers is being developed by the Sydney Gateway Project. This involves a site inspection of each property by an acoustic consultant to produce the reports followed by a detailed procedure for the implementation of treatments which includes review by an appropriately qualified builder. As required by Condition of Approval E31(e), a process for seeking feedback on the noise mitigation measures to be implemented has been developed in consultation with TfNSW. The At-Property Noise Treatment Process is included in Appendix I. As required by CoA E33 where the implementation of operational noise mitigation measures required by Condition E32 would not be implemented, the Proponent must submit to the Planning Secretary a report to justify this position. The report must detail the temporary measures that would be implemented to reduce construction noise impacts, until such time that the operational noise mitigation measures are implemented. The report must be endorsed by the ER and submitted to the Planning Secretary prior to the commencement of Work which would affect the identified residences.

3.4.4.1. Detailed Land-Use Survey

A detailed land-use survey has been undertaken as part of the design and construction process as per CoA E13. The survey included detailed ground-truthing in order to confirm the accuracy of the sensitive receiver database for the project. The outputs of the land-use survey have been incorporated into the FDD operational noise model.

Summary of changes are provided below:

- 28 residential receivers changed to commercial or other non-sensitive receivers.
- 2 residential receivers changed to childcare facilities.
- 14 commercial changed to residential receivers.
- 3 commercial changed to 2 childcare facilities and 1 medical facility.

3.4.5. Impacts from Operational Ground-borne Noise and Vibration

Vehicles are unlikely to cause vibration impacts at adjacent receivers unless there are road irregularities, for example pot holes. The new and upgraded roads within the project site will be designed and constructed to avoid significant irregularities.

Furthermore, new or upgraded roads are no closer to receivers than existing roads. The only potential discontinuities would be expansion joints on bridges which are located remote from sensitive receivers relative to existing roads and the expansion joints. The airborne noise levels would control the outcome and so ground-borne noise is not considered to be a constraint.

The NSW Road Noise Policy states that:

"Vehicles operating on a roadway are unlikely to cause a perceptible level of vibration unless there are significant road irregularities, particularly if the affected receiver is more than 20 metres from the roadway."

Generally, any new or upgraded roads will be constructed within the existing road corridors, with new or redeveloped roads being in improved condition compared to the existing roads, meaning that new roads would not be constructed in closer proximity to sensitive receivers compared to existing roads. Where new roads are being constructed within newly formed road corridors, the new roads would be located in excess of 20 m from the nearest potentially affected residences and therefore no appreciable increases in operational vibration levels are expected.

Notwithstanding, reference pre-construction vibration measurements were undertaken on a prior project with a similar mix of traffic and vehicle speeds, however the road surface was not newly constructed. For reference, root mean square (rms) vibration velocity levels were measured as follows:

- Eight measurement locations were considered.
- Two of the eight locations were located within 6 m of the new/upgraded road segments.
- A comparison of pre and post construction vibration levels showed a strong trend for either a reduction in vibration levels or vibration levels remaining unchanged.
- As a screening method, rms vibration levels were compared to the night-time continuous vibration target of 0.14 mm/s for residential land uses. Vibration levels at all locations were typically less than this target. Vibration levels approached this target for one receiver located within 3 m of the road which would is not an expected for the Sydney Gateway Road Project.

As such, impacts from operational ground-borne noise and vibration are not anticipated. This is corroborated in the Sydney Gateway Environmental Impact Statement (EIS/MDP) Chapter 10 Noise and Vibration, Section 10.2.2.

Design standards implemented to avoid road irregularities include Austroads Guide to Road Design, Austroads Guide to Pavement Technology and all relevant Australian Standards.

3.4.6. Ground-based Airport Operations

The project has the potential to alter aircraft related ground-based noise impacts at receivers which are near to the airport. The features of the project that may alter existing Sydney Airport aircraft related ground-based noise levels include:

- Removal of shipping containers at Tyne Containers. Shipping containers are currently stacked a minimum of three containers high around the boundary of the site. The project would require the land and the removal of containers, which could result in reduced noise screening of ground-based noise at residential receivers to the north of Tempe Reserve.

- Demolition of several airport buildings adjacent to Qantas Drive. The removal of these buildings could result in removed noise screening for receivers to the east of the airport from ground-based activities such as engine run-ups.

The options for mitigating ground-based aircraft noise impacts are limited. Shielding the source of noise using a noise barrier or similar structure to reproduce the noise benefit provided by the removed existing jet base buildings would be the most appropriate form of mitigation, noting that the existing buildings have relatively large gaps between them and do not act a as continuous barrier along the jet base boundary.

It is noted that the proposed Qantas Flight Training Centre (QFTC), 297 King Street, Mascot (SSDA 10154) received development consent on 29 November 2019. The QFTC is over 18 m tall and would provide significant acoustic shielding to NCA06/NCA08. The Qantas Flight Training Centre Environmental Impact Statement SD10154 states that it is planned for the QFTC to be in operation before the existing flight training centre is to be demolished. The QFTC would reduce noise from the run up areas, the Northern Pond apron and the Western freight area.

A Qantas Jet Base Demolition Scope of Works (Qantas Jet Base Demolition SOW_INFO DOC_20200218.pdf) was issued as Tender Addendum 16.02 (Information Document Number: 02-Demolition Scope Clarification). This Scope of Works indicates that shipping containers would be used to create a temporary airside boundary wall along the western side of Buildings 167 and 171 between relocated Gate 1 and Gate C. This wall would potentially comprise shipping containers stacked two high. This temporary wall would reduce noise from the Qantas eastern Area and the Dash 8 gates to receivers in NCA06/NCA08.

This information is provided for context noting that assessment of noise levels from ground-based airport operations is outside the scope of this report.

3.5. Design Verification and Review

This Design Lot has been prepared in accordance with the Sydney Gateway Design and Construction Deed, SWTC Appendix C.2 Clause 3.6.

The JHSW Internal Design Review has been undertaken in accordance with Design Plan Requirement 3.8A-02 (Stage 1)/Requirement 3.10A – 02 (Stage 3).

Comments provided by TfNSW, Independent Verifier and other Stakeholders will be incorporated as necessary and evidence of closure of the previous stage is presented in Appendix A.

4. Design Integration

All investigations, design, construction, operation and maintenance requirements have been integrated in the development of the Design Package. Interdisciplinary reviews have been incorporated into each design phase to ensure cross-discipline design issues are identified, coordinated and addressed. The table below highlights the key cross-discipline requirements that influenced the developing design, respectively.

Table 4-1: Design integration

Interface	Resulting Design Outcome, updated per submission phase
Alignment RD-3425 RD-1310 RD-1320	▪ Additional lane added to SPI M4 to Qantas Drive with no significant changes to the acoustic outcomes in terms of exceeding sensitive receivers.

Interface	Resulting Design Outcome, updated per submission phase
Miscellaneous Structures (Noise Wall) MS-1620	▪ It should be noted that the residual number of exceeding receivers (at ground and first floor only per the RMS Noise Mitigation Guideline) in NCA03 was 21 for the DCD and 15 for the FDD.

4.1. SPI Integration Works

The operational noise modelling incorporates the interface of the Sydney Gateway Project with SPI.

4.2. Key External Interfaces

The design has been developed to address the key external interfaces with a summary of the consultation records provided in Appendix A via the external design review comment sheet. Key external interfaces included TfNSW, Sydney Airport, Sydney Gateway Stage 2 contractor, ARTC and Inner West Council.

In addition to the aforementioned interfaces, the ONVR has been displayed publicly on the TfNSW Website and feedback sought from the community with the following results:

- Three livestream information sessions held in 2021 (13/07, 28/09, 14/10) where noise/vibration issues were addressed and to promote our notifications/updates/PDLP.
- Project update (included as Appendix A) with a link was sent on 27 September 2021 to wider stakeholders with a direct link to the ONVR on the project website and included:
  - 328 recipients
  - 87 ONVR views with Zero enquiries, issues or complaints
  - Project updates are sent to over 2000 recipients.
- Project update with the ONVR link was promoted in the Virtual engagement room 21 September 2021 to 28 October 2021 and included:
  - Over 200 views of the project update
  - The Virtual room is still active and being promoted through regular project updates.
- A dedicated fact sheet (included as Appendix A) with an ONVR link on the project website homepage.
- An ONVR link is included in contracts sent out to residents who agree to sign up to At Property Noise Treatments.
- In responding to enquiries about At Property Noise Treatments, the project did reference and provide the link to less than 10 residents, referencing the ONVR in either letter or email format.
- The Tempe 2020 Facebook Page (local residents page) provided positive comments regarding the ONVR and livestream event. Originally the Project had access to this Page, however ‘membership’ of this Page has since been restricted to residents only (you need to apply and provide evidence you are a resident of Tempe to now join this group).

JHSW notes that despite the above consultation, there was no feedback or issues raised throughout this consultation which required an update to the ONVR and we consider there are no outstanding issues on which to respond.

5. Design Considerations

5.1. Safety in Design

The design has been developed to ensure a safe operational environment, as well as taking into consideration the safety of personnel and the general public during construction and maintenance of the Project work. Risks shall be identified and addressed in accordance with the Risk Management Procedures described in the Risk Management Plan. The design will address these requirements through its Safety in Design program modelled on the Construction Hazard Assessment and Implication Review (CHAIR) process. This process consists of two key elements:

- The ongoing review and identification of potential safety issues during the design process through the consideration and close out of issues within the quality assurance documentation. This documentation is required for interdisciplinary reviews, independent reviews and internal reviews. This ensures that Safety in Design is considered at all stages of the project for all documentation in addition to individual workshops.
- Safety in Design workshops to be held during key stages throughout the development of the design. The intention of this workshop is to ensure hazards relating to design are identified at an early stage and ensure that systems are established to control these issues and hazards. TfNSW representatives, maintenance personnel, the project verifier, OHS personnel and key design and construction personnel all provided input at the workshops, with a view to closing out key issues at the design or construction stages.

Any residual risks or unresolved issues remaining at completion of the design will be transferred to the Construction Risk for downstream management. The following SiD workshops have been undertaken to date:

- CHAIR 1 SiD workshop (DCD phase) - 15 December 2020
- Gateway SiD & Risk Workshop with ARTC Stakeholders – 12 March 2021
- CHAIR 2 SiD workshop (SDD phase) - 16 March 2021
- Sydney Desal Chair 2/3 SiD Workshop – 14 May 2021

There are no SiD risks applicable to operational noise modelling and any SiD mitigations are addressed in other relevant design lots.

5.2. Construction and Maintenance Considerations

5.2.1. Key Constructability Considerations

During development of the design, the construction team has provided input through value engineering workshops, informal meetings and discussions and through participation in the JHSW Internal Design Review process.

5.2.2. Key Maintenance Considerations

The Miscellaneous Structures (Noise Wall) MS-1620 packaged will detail the key maintenance considerations for this element.

5.3. Sustainability

The following key aspects are noted in relation to the ISCA Credit for operational noise and vibration.

5.3.1. Impacts from Operational Noise

The potential impacts of operational road traffic noise resulting from the detailed design have been assessed in order to determine reasonable and feasible mitigation measures to achieve the project operational noise criteria. A combined noise barrier and mound, lower noise pavement in the form of DGA and at-receiver property treatments have been implemented in the design in order to achieve the operational noise criteria.

6. Design Compliance

6.1. Agreed Exceptions

Agreed exceptions from SWTC Appendix B.1 Table B.1-2 applicable to this Design Lot are listed in the table below.

Table 6-1: Agreed Exceptions

Item No	Discipline	Design Departure	Affected Locations	SWTC Section Reference
Nil	Nil	Nil	Nil	Nil

6.2. Departures

The departures that are currently under discussion, are listed in the table below:

Table 6-2: Departures under discussion

Item No	Discipline	Design Departure	Affected Locations	SWTC Section Reference
1	Noise and Vibration	TfNSW approved the use of the road traffic volumes from the EIS/MDP Technical Working Paper 2 in the detailed design of Sydney Gateway Stage 1 and Stage 3. Traffic volumes provided by TfNSW were checked against the data presented in the EIS/MDP and noise model provided. RFI: SG-20-RES-0000-NV-0001	Road Alignment Stage 1 and Stage 3	Nil
2	Noise Wall Structures	An RFI was submitted to TfNSW in relation to the extent of noise wall overlap. The FDD noise wall achieves a maximum overlap of 3D whereas the SWTC requires a minimum overlap of 4D. SG-20-AAJ-2000-RD-RFI-0058-01 – Noise Wall Overlap	Noise barrier overlap	SWTC App D.1 Section 13(c)(i)

The departures register is shown in Appendix G.

7. Items for Resolution

7.1. Hold Schedule

The are no items currently on ‘Hold’ for this Design Lot.

Table 7-1: Items on Hold

Hold	Items on Hold	Status
Nil	Nil	Nil

7.2. Ongoing Design Development

This is the final report and there are no ongoing or on-hold items that may affect the design.

REVIEWER											REVIEWER			
Item	Stage	Reviewer	Organisation	Date	Document Reference	Reviewer Comments	Project Deed Ref.	Compliance Status		By	Response Status	Close-out Response	New Comment Reference ID	Date Closed
1	DCD	Sarah Barker	TfNSW	8/3/21	who doc	Always refer to MDP when ever referring to the EIS		O	Document can be updated to include reference to MDP.	A. Parker	C			19-Jul-21
2	DCD	Sarah Barker	TfNSW	8/3/21	1.1	Use same project description as that used in the env mgmt plans as the project description is not divided up into Stage 1 and 3		O	The project description used is as per all other project design reports.	A. Parker	C			19-Jul-21
3	DCD	Sarah Barker	TfNSW	8/3/21	2.3	the EIS/MDP includes RMS' noise criteria guideline and noise mitigation guideline. These need to be also referenced in table 2.2		O	These will be added to Table 2-2.	A. Parker	C			19-Jul-21
4	DCD	Sarah Barker	TfNSW	8/3/21	2.4	appendix D only references ISCA criteria. The CoA also need to be referenced either in appendix C or D		O	A reference to the CoA will be made in Section 2.4. The CoA compliance table will be moved from Appendix C to Appendix D.	A. Parker	C			19-Jul-21
5	DCD	Sarah Barker	TfNSW	8/3/21	3.4.2	clarify construction impacts and road traffic impacts are assessed in accordance with NSW guidelines as identified in the EIS/MDP		O	Construction impacts are not within the scope of this report. These will be tabled in the relevant CEMP Sub-Plan A clarificaition will be added to confirm the road traffic impacts are assessed in accordance with the NSW guidelines as identified in the EIS/MDP.	A. Parker	C			19-Jul-21
6	DCD	Sarah Barker	TfNSW	8/3/21	table 3-9	the EIS/MDP identified Lo4 as having a -0.3 rather than a -0.1 difference		O	The number is a table note reference. The data for this time period was excluded.	A. Parker	C			19-Jul-21
7	DCD	Sarah Barker	TfNSW	8/3/21	table 3-10	The number of receivers identified in the EIS and RTS are on the basis there being no noise barrier installed (unmitigated). When the noise barrier is installed, around 100 properties no longer require treatment (see table 57 of noise tech paper). This means after the noise wall is installed there is around 130 properties eligibe forat-receiver noise treatment. The number of properties identified in this report indicate 217 are eligible. But it also says the modelling included the noise barrier. Please confirm if the 217 is the residual number or if it's on the basis there is no noise barrier (unmitigated). If it's the residual number (ie noise barrier installed) then where is the increase when compared to the concept design??		O	The EIS presents numbers of exceedances in terms of floors and buildings and these are intermixed in different places within the EIS N&V report. The FDD report will include a breakdown of receivers by façade, floor and building and draw a comparison to the EIS and identify any discrepancies. We note some buildings may already have treatment through the M5 project or airport related. These will also be identified. The number of exceedances relates to total number of receivers (ie all levels and not total buildings for the residential receivers). The final extent of at-property treatments will be fully detailed in the FDD report. The inforamtion will be presented in terms of number of buildings, number of floors and number of exceeding facades. The number of residual exceedances is after inclusion of the noise mound/wall.	A. Parker	C	DCD comment closed, new comment open against FDD submission		19-Jul-21
8	DCD	Sarah Barker	TfNSW	8/3/21	3.5.4	See above comment. It appears the 217 is the residual number, but as noted above around 100 properties are no longer required on the basis the noise wall is installed		O	Please see response to Comment#7	A. Parker	C	DCD comment closed, new comment open against FDD submission		19-Jul-21
9	DCD	Sarah Barker	TfNSW	8/3/21	appendix E	each figure needs a title. Suggest the first image are the sentitive receivers in the study area, the second image is the properties eligible for noise mitigation Please confirm if the last 2 figures are on the basis the noise barrier is installed or not		O	The labelling strategy for these figures can modified as requested.	A. Parker	C			19-Jul-21
10	DCD	C Tsitsos	TfNSW	8/3/21	general	noise predictions for the assessment have not been provided		O	Detailed results table will be provided in the FDD report. Noise contours for the DCD design are in Appendix E.	A. Parker	C	Awaiting updated report		15-Jul-21

11	DCD	C Tsitsos	TfNSW	8/3/21	3.4.1.2 Acute noise levels	incorrect statement - Residential receivers exposed to 'acute' noise levels as part of a road project are considered for mitigation regardless of the increase associated with the project, as long as the ~~dominant noise at the receiver is due to the project.,~~ should change to "*contribution from the road project is acute*"		O	The statement will be updated in the report.	A. Parker	C	Awaiting updated report		15-Jul-21
12	DCD	C Tsitsos	TfNSW	8/3/21	3.5.2.4 Predicted Noise Levels (Design Year 2036)	A comprehensive review of the noise assessment is not possible without the detailed facade specific result tables. Please advise when this information will be available.		O	Detailed results table will be provided in the FDD report.	A. Parker	C	Awaiting updated report		15-Jul-21
13	DCD	C Tsitsos	TfNSW	8/3/21	3.5.3.2 Road Design Measures	The operational noise mitigation strategy has not been undertaken correctly. Condition NV1 of Appendix C "SWTC Compliance" states that an operational noise mitigation strategy be developed and implemented including investigating the need for low noise pavements.		N	The section on Low Noise Pavements will be detailed further, however it should be noted that the use of OGA is not considered appropriate for the project given the lower speeds and whole of life considerations.	A. Parker	C	Awaiting updated report		15-Jul-21
14	DCD	C Tsitsos	TfNSW	8/3/21	3.5.4 At-Property Acoustic Treatments	incorrect reference - At-property acoustic treatments will be scoped in accordance with the ~~At-Property Noise Treatment Guideline~~., should be " *At-receiver Noise Treatment Guideline"*		O	Reference will be updated accordingly.	A. Parker	C	Awaiting updated report		15-Jul-21
15	DCD	C Tsitsos	TfNSW	8/3/21		3rd paragraph - The category of architectural treatment applicable to these residences is missing. Appendix B of TfNSW's "At-receiver Noise Treatment Guideline" outlines the type of treatment appropriate for the level of noise exceedance predicted.		O	The category of treatment based on the exceedance will be added to this section.	A. Parker	C	Awaiting updated report		15-Jul-21
16	DCD	C Tsitsos	TfNSW	8/3/21	3.5.5 Ground-based Airport Operations	3rd paragraph - What is the noise reduction achieved by the new Qantas Flight Training Centre and will noise levels for residences increase as a result of the project? This needs to be modelled and quantified so that additional architectural treatments can be determined.		O	Ground-based airport noise not in scope	A. Parker	C			15-Jul-21
17	DCD	E Perez	IV	3/12/21	Appendix C ID# NV1	Appendix C is not SWTC. Please check and update. Evidence is listed as " ongoing". This is not objective evidence. What are the design packages that will include operational noise elements? What is the Operational Noise Mitigation Strategy implemented as part of the design? What are the packages and related Design Reports investigating the need for low noise pavement, noise barriers and at - property mitigation? Please review the requirement of this UMM (- Not REMM's update this also) update for all the elements of this UMM. Reference in S3.5.3.2 makes only a statement as to what will be applied, with no explanation or evidence of 'investigation' as this UMM requires.	MCOA A1 Response to Submissions Report MCOA E31 SWTC App. B.6 Pavements	N	Noted will update accordingly. Evidence is noted as ongoing as there is an FDD report to come which will present final design and analysis. The Reference to UMMs can be updated. The operational noise strategy is the implementation of appropriate pavement (DGA) and combination of noise barriers and property treatments. This report identifies the need for noise barriers and at-property treatments, additional information can be included in relation to pavment selection.	A. Parker	C	TM Closed on behalf, see FDD comment EP In Rev B No B6 pavement included in Appendix C		20-Jul-21
18	DCD	E Perez	IV	3/12/21	Appendix C ID# NV2?	NV2 is missing - Investigate reasonable and feasible options to reduce the propagation of noise from ground-based airport activities following removal of buildings as part of the project. This will include options to retain screening provided by existing buildings. Please address this and update.	MCOA A1 Response to Submissions Report. New ID NV2	N	Review of ground based airport noise activities is currently not in scope	A. Parker	C			14/04/2021
19	DCD	E Perez	IV	3/12/21	Appendix C ID# NV3	The reference for evidence does not refer to this UMM. Please review and update. Further the section 3.5.4 does not refer to the detailed design review required by this UMM. Has the detailed design been competed? Has the review been completed? Update reference to At-Receiver Noise Treatment Guideline (RMS 2017b). Last sentence; remove the word 'may' are there 15 sensitive receivers or not? is it reasonable and feasible that treatment would be applied in this stage of construction. Evidence and consultation with ARTC?	MCOA A1 Response to Submissions Report. New ID NV3 MCOA E31 (b)	N	The Sections can be updated to refer to the UMM. The final review and details of mitigation requirements will be provided in the final FDD report. Update will be made ot the At-Receiver Noise Treatment Guideline. The word 'may' will be removed for the final report. A section will be added to the report which includes the ARTC coordination, which is limited to assessing cumulative impacts based on the Stage 2 EIS/MDP with a view to sharing information. It should be noted that the Stage 2 project is at preferred tenderer stage and as such does not have a finalised design.	A. Parker	C			20/7/21
20	DCD	E Perez	IV	3/12/21	Appendix C ID# NV4	The reference for evidence does not refer to this UMM. Please review and update. What are the reasonable and feasible measures considered in relation to the cumulative noise impact with the Botany Rail Duplication Project? Is there a Design Report that discusses this? 14/04/21: Could words to this effect be added and perhaps reference to the design report or the separate piece of work mentioned bellow? Receivers eligible for consideration of mitigation are being inspected and scopes for treatments being developed by the Sydney Gateway Project. This is a separate piece of work to the operational noise report. 20/07/21 What is the work package or separate piece of work to produce detailed property inspection refered to at the bottom of pg 34 on Rev B?	MCOA A1 Response to Submissions Report. New ID NV4 MCOA E31 (b)	N	A noise barrier is not proposed for Sydney Gateway Project or for the Botany Rail duplication project where there is overlapping impact.	A. Parker	C	TM Closed on behalf, see FDD comment		20-Jul-21

21	DCD	E Perez	IV	3/12/21	S1.2	The Requirements of E31 (b) is to; confirm the operational noise predictions based on the final design. Please review and resubmit against the Final Detail Design? Please provide the Detail Design report mentioned here? The scope of this report does not satisfy the MCOA requirement. Confirmation must be based on an appropriately calibrated noise model (which has incorporated noise monitoring, and concurrent traffic counting, where necessary for calibration purposes). Was any traffic counts performed for this Report? TM Where is RFI ref in FDD report, and has this been accepted by TfSNW?	MCOA E31 (b)	**N**	The FDD report will include and be based upon the locked final design. Addittional traffic counting and noise monitoring was outside the scope of this report. The traffic counting and monitioring conducted as part of the EIS was relied upon for this purpose. Additional infomation in relation to this will be added to the FDD report for clarity. However the predictions are based upon a calibrated noise model. RFI has been raised with TfNSW to validate this approach which will be referenced in the FDD submission (RFI - SG-20-RES-0000-NV-RFI- 0002-01) **27.7.2021. - RFI has been accepted and responded to by TfNSW - It is referenced in Section 3.4.2.3.** **The RFI is included in Appendix G of the Report and is included Pages 1-4 of the Attachment to these comments.**	A. Parker	C	S1.2 is now satisfied please address S3.4.2.3 and this can be closed.		10-Aug-21
22	DCD	E Perez	IV	3/12/21	S1.4	What about RMS procedures and specifications for pavement design. Noise and vibration modelling specifications and standards. 14/04/21: S1.4 is Nil and s3.4 are both insufficient please review SWTC B.6 and update	MCOA E31 SWTC B.6	**N**	All noise related documents are referenced within Section 3.4. The full list can be reproduced in the table in Section 1.4. **27.7.2021. -Section 3.4.5 references 'Design standards implemented to avoid road irregularities include Austroads Guide to Road Design, Austroads Guide to Pavement Technology and all relevant Australian Standards. SWTC B6 applies to and is addressed in the Pavement Design Package.** **Section 2.3 (refered to in Seciton 1.4) provides list of noise relevant documents.** **Refer to Pages 5 and 6 of the Attachment to these comments.**	A. Parker	C	S1.4 is Nil and s3.4 are both insufficient please review SWTC B.6 and update		08-Oct-21
23	DCD	E Perez	IV	3/12/21	S3.3	Assume this will be updated when detailed design has been completed	MCOA E31	**O**	This table will be updated if required to capture any design changes from DCD to FDD.	A. Parker	C			20/7/21
24	DCD	E Perez	IV	3/12/21	S3.4	What about SWTC App B.6 Pavements and others	SWTCApp B.6	**O**	These Appendices are not direcly applicable to operational noise. A broader discussion on pavement selection will be included in order to demonstrate why the selected pavement type is the most resonable and feasible solution for noise as well as broader project benefits.	A. Parker	C			20/7/21
25	DCD	E Perez	IV	3/12/21	S3.5	This conflicts with S1.2		**O**	This will be reviewed for consistency.	A. Parker	C			20/7/21
26	DCD	E Perez	IV	3/12/21	S5.3	Please articulate the base case and then the proposed improvements aimed to claim the credit for operation Noise? 20/07/21: Not Addressed in Appendix D as stated in S5.3 of Rev B	ISCA Tool 1.2	**N**	Additional information specifically mentioning the ISCA credit will be added to the report. **27.7.2021. Reference to Appendix D to be deleted. Section 5.3 details operational aspects relevant to operational noise and will be used if required by the Sustainability team for ISCA.** **27.7.2021. Reference to Appendix D to be deleted. Section 5.3 details operational aspects relevant to operational noise.** **Refer to Pages 7 of the Attachment to these comments.**	A. Parker	C			10-Aug-21

27	DCD	E Perez	IV	3/12/21	Appendix C No E31	The ONVR Must be prepared in consultation with the relevant Councils, other relevant stakeholders and the community - There is no evidence for consultation. Please provide. 20/07/21: Not provided yet in Rev B.	MCOA E31	**N**	The DCD ONVR has been issued to relevant parties as required including Councils for comment. Evidence of this consultation will be provided in the next submission **27.7.2021. Evidence of consultation provided in last page of Appendix A via the design review register. Refer to Pages 8 of the Attachment to these comments.** **Refer to Comment 39 response reproduced below Section 4.2 identifies key external interfaces with evidence of consultation to date provided in Appendix A via the comments sheet.** **The purpose of this version of the report is achieve alignment between the design team and TfNSW on its content and findings such that the next phase of external community consultation (public display) can proceed. Evidence of any feedback received from the public display can then be provided together with the report o the Secretary for approval.**	A. Parker	C	10/8/2021: TM As discussed at close out meeting on 29/07/21 further evidence of consutation will need to be provided satisfy E31 (as per TfNSW comment 39). It's understood that this will be provided (and any required amendments to the Noise report) before submission to the Secretary for approval IWC / SYD has confirmed no further comments		11-Aug-21
28	DCD	E Perez	IV	3/12/21	Appendix C No E31 (a)	This report does not discuss the objective required. Please review and update. 20/07/21: Can't find a brief statement about design objectives as required by E31 a) in s3.4	MCOA E31	**N**	The report can be updated to include specific reference to E31a. The criteria are included in the report and the detailed results tables will include criteria per receiver.	A. Parker	C	TM Closed on behalf, detailed in Section 2.4		20-Jul-21
29	DCD	E Perez	IV	3/12/21	Appendix C No E31 (b)	Final design is not complete as at the time of this review. How can this be compliant? Please provide confirmation of model calibration.	MCOA E31	**N**	The DCD report is based on the DCD at time of reporting. The FDD report will be based on the final design. The noise model is calibrated. Please refer to response to Comment#23	A. Parker	C			20/7/21
30	DCD	E Perez	IV	3/12/21	Appendix C No E31 (c)	There is no discussion regarding the Vibrational impacts in this report. Review and update	MCOA E31	**N**	Operational vibration will not be an issue however a section covering operational vibration will be added to the report as requested.	A. Parker	C			
31	DCD	E Perez	IV	3/12/21	Appendix C No E31 (d)	Same as E31 (c)	MCOA E31	**N**	A discussion with an overview of impacts in each NCA can be provided. The detailed results table to be included in the FDD report will include detailded noise levels for every façade of every potentially affected receiver.	A. Parker	C	S3.4.4 in Rev B		20/7/21
32	DCD	E Perez	IV	3/12/21	Appendix C No E31 (e)	S4.2 This list is incomplete as required it leaves out the community and the Councils. How about specific sensitive receivers affected by the detailed design? 14/04/2021: If not here please let us know where this will be addressed.	MCOA E31	**N**	The purpose of this report is to confirm the operational noise and vibration impacts of the project. The sensitive recievers and those eligible for at-reciever noise mitigation measures identified by this report will be managed by the community engagement team to undertake the necessary assessment and perform the works. The ONVR will not detail the works required to achieve compliance as this is subject to onsite inspections **27.7.2021. A separate report identifying the scope of treatments for each eligible receiver (Identified in Section 3.4.2.4) is being prepared. The process in Appendix I details the process for the implementation of the treatments and where these scoing reports are provided to the affected receivers for review.**	A. Parker	C	TM, closed on behalf: Evidence of specific sensitive receivers assessment and reports, signed by the community were provided in the close out meeting on 29/7/21. There are hundrers of these so no specific document ref can be provided		11-Aug-21
33	DCD	E Perez	IV	3/12/21	Appendix C No E31 (f)	No mention of complaints procedure ? Please review and comply.	MCOA E31	**N**	There is a separate piece of work relating to engagement with the community and compaints handling as complaints during construction are not the remit of this report. Please refer to the Community Communication Strategy for the project for stakeholder engagement A compliance matrix (new table) will be included at the front end of the report. The compliance matrix will look to specicially demontrate how/where in the report (or alternative deliverables) Condition E31 has been addressed. This would include reference to the Community Communication Strategy as required.	A. Parker	C	TM Closed on behalf: Section 2.4 Refers to Community Communication Strategy		20-Jul-21
34	DCD	E Perez	IV	3/12/21	Appendix C No E31	ONVR is to be verified by a suitably qualified and experience noise and vibration expert...Please provide them with ALL the projects requirements, this report does not currently comply with project requirements or comply with E31 etc.	MCOA's SWTC's Response to Submissions Report RMS Standards, guidelines and procedures	**N**	The report has been prepared by Resonate Acoustics A verification letter will be included for the FDD report.	A. Parker	C	TM Closed on behalf: Verification letter provided in App F. See other FDD comments about complying with E31 and all project requirements		20-Jul-21

35	DCD	E Perez	IV	3/12/21	Appendix F	Design verification in compliance with the JHSWJV Quality System and SWTC not supplied.	Design Plan SGWPW-JHSW-NWWPM-PLN-00002 Rev 02 Section 6.2.3.1 And Appendix A-02	**N**	Design verification during design development is an internal process. The FDD report will be accompanied with a Contractors Certificate - Design Documentation (Schedule 20) and a Subcontractors Certificate - Design Documentation (Schedule 25). The internal review and verification checklist which shows record of coordination with other disciplines (where relevant to the package) will be included as part of the FDD submission as a new Appendix to the report.	A. Parker	C	TM Sch 20 and Sch 25 provided with submission. But the internal verification has not been incld in the report but examples have been viewed on request		20-Jul-21
36	DCD	Stuart Strachan	SYD	12/3/21		No comments (TB Ref: SGWPW-SACL-JHSW-CORR-000012)		**O**	No response required	A. Parker	C			12-Mar-21
37	DCD	IWC Mario Mouxuoris	IWC	22/2/21		At an appropriate stage of the development, consider the installation of permanent perimeter monitoring boreholes with associated monitoring program, around the old tip site for the purpose of ensuring any in-situ onsite contamination is sufficiently contained.		**O**	The operational noise and vibration report does not detail land contamination management. Montoring and management of contamination during construction within the former Tempe landfill is detailed in the Landfill Leachate Gas and Odour Managemnet Plan which has been submitted to IWC for review.		C	Mario Mouxouris - IWC - Noted response		14-Jul-21
38	FDD	Stuart Strachan	SYD	5/7/21		No comments (TB Ref: SGWPW-SACL-JHSW-CORR-000059)		**O**			C			05-Jul-21
39	FDD	Sarah Barker	TfNSW	29.6.2021	Table 2-3 CoA E31	The report mneeds to be prepared in consultation with relevant councils and other relevant stakeholders. The report does not capture evidence of this consultation. As this report is being prepared to comply with CoA E31, and needs to be issued to the Secretary for approval, then it needs to capture the outcomes of this consultation		**O**	Section 4.2 identifies key external interfaces with evidence of consultation to date provided in Appendix A via the comments sheet. The purpose of this version of the report is achieve alignment between the design team and TfNSW on its content and findings such that the next phase of external community consultation (public display) can proceed. Evidence of any feedback received from the public display can then be provided together with the report o the Secretary for approval.		C			12-Aug-21
40	FDD	Sarah Barker	TfNSW	29.6.2021	3.3.1	The EIS noted some hotels have staff permanantly reside on site. Section 3.3.1 of the ONVR says a property inspection determined there are no permanent residences in the hotels. What evidence is there to confirm this statement? Please also consider if there are any construction workers that will reside in the hotels longer than 3 months.		**O**	The EIS assumes but does not definitively confirm that staff permanently reside on site. Section 6.2.2 of the EIS states the following: "It is noted that a number of hotels have been identified as exceeding the NCG criteria. These receivers have been assessed as residential on the basis that they may have staff who reside permanently on site. Further investigation of the impacts at hotels should be completed during Detailed Design, noting that only areas of permanent residence require assessment and consideration of mitigation." Interviews were conducted with hotel managers during the inspections and we have been advised that there are no hotel guests or staff members that reside in the hotel for more than 3 months. In Section 3.4.2.4.2, it is advised that an assessment of the existing facades of the hotels in the project assessment area was conducted during the EIS/MDP ('Hotel Inspections and Façade Performance Predictions' memorandum, dated 14 August 2019, prepared by SLR Consulting). The assessment concluded that the existing external facades provide acoustic ratings to adequately attenuate external noise sources to appropriate internal noise levels within the hotels.		C			12-Aug-21
41	FDD	Sarah Barker	TfNSW	29.6.2021	3.3.2	Section to be removed from the report as it does not relate to road traffic noise, or is it needed to comply with E31.		**O**	This is not required to Address E31. It is provide context relating to UMM NV2 and to confirm that this relates to on airport noise and related to the road design and hence out of scope. The text will remail in the report for this purpose.		C			12-Aug-21
42	FDD	Sarah Barker	TfNSW	29.6.2021	Table 3-1	Query how 30 Terry Street is eligible as this address was not identified in the RTS report and not convinced the key design changes would have triggered this receiver There are a number of residential receivers in appendix D of the response to submissions report which are no longer eligible. The design changes outlined in section 3 would not have caused this large reduction. Please clarify why so many are no longer eligible		**O**	The EIS study area did not encompass an assessment area up to 600 metres from the nearest project road as per the NSW EPA's RNP guidance. Therefore, properties such as 30 Terry St and King St, Mascot did not trigger for mitigation in the EIS/RTS. The FDD ONVR study area includes all receivers within 600metres from the project alignment. Therefore, some receviers not identified in the EIS are identified in the FDD. The reduction is due to the consideration of the noise barrier in the FDD. The residual receivers noted in the EIS/RTS eligibility assessment did not take into consideration of the noise barrier south of NCA03. Most of the properties that fell out of eligibility in the FDD ONVR are in NCA03 where the noise barrier has now been considered.		C			12-Aug-21

43	FDD	Sarah Barker	TfNSW	29.6.2021	3.4.2.1	The implementation of operational noise mitigation for residents must be within 6 months of construction commencing as per CoA E32. Please ensure this section is reflective of CoA E32		O	Noted. The requirement is known and clear in E32 and the team is tracking this as part of the wider project compliance tracking.		C			12-Aug-21
44	FDD	Sarah Barker	TfNSW	29.6.2021	3.4.3.3	This section needs to clarify if a 4m overlapping wall results in a net reduction in receivers eligible for treatment, to confirm oif the 3m overlap is adequate The point which states there is reduction of 15 receivers (residual impact) from the EIS to the FDD report needs further explanation. Is this as a result of the overlapping noise wall as this not convincing.		O	Please note that an RFI relating to the noise wall overlap has been approved by TfNSW. The intention of Section 3.4.3.3 is to advise that the overlap does not reduce the effectiveness of the noise barrier. It is not intended to advise that the overlap resulted in a reduction of 15 receviers. Any change in residual receivers results from the final design and extent of the noise mound/barrier and road alignment.		C			12-Aug-21
45	FDD	Sarah Barker	TfNSW	29.6.2021	3.4.6	This section is not needed to comply with the State CoA - recommend removing from the report		O	This is not required to Address E31. It is provide context relating to UMM NV2 and to confirm that this relates to on airport noise and related to the road design and hence out of scope. The text will remail in the report for this purpose.		C			12-Aug-21
46	FDD	Sarah Barker	TfNSW	29.6.2021	4.2	Section needs to reflect the requirements of CoA E31 - notably that the report was prepared in consultation with relevant councils (this includes Bayside, City of Sydney and IWC) and relevant stakeholders. ARTC and SYD may not be deemed to be the only relevant stakeholders by DPIE. The Stage 2 contractor is definitely not deemed to be a stakeholder		O	Section 4.2 identifies key external interfaces with evidence of consultation to date provided in Appendix A via the comments sheet. The purpose of this version of the report is achieve alignment between the design team and TfNSW on its content and findings such that the next phase of external community consultation (public display) can proceed. Evidence of any feedback received from the public display can then be provided together with the report o the Secretary for approval.		C			12-Aug-21
47	FDD	C Tsitsos	TfNSW	15/7/21	3.4.3.3 Noise Barriers	3rd paragraph - The location of NW02 has not been provided on the plan in Appendix E4		O	Noted. The noise barrier can be included in the relevant figures in Appendix E. **Please refer to Page 9 of the Attachement to these comments for how the noise barrier has been added to the figure. The noise barrier has been added to all relevant E appendices.**		C			12-Aug-21
48	FDD	E Perez	IV	20/7/21	Appendix C SWTC Compliance	Has the Design Criteria for Acoustic Walls as per SWTC Appendix D.1 Both stage 1 & 3 been considered. If not in this package where? Subject: RE: SG - Bayside Comments on Operational Noise Report (NV-1040)

Hi Daniel

Thanks for the opportunity to comment.

Council has general in-house expertise in noise assessment, though not the level of expertise required to undertake this type of assessment. I'm happy for DPIE or the relevant State authority to determine whether this assessment meets the conditions of the approval for the project and any applicable standards.

I would also note that the location of sections of the Gateway project within the Bayside LGA is generally not within proximity of noise sensitive land uses, and this assessment is therefore likely to be of greater interest to Inner West Council.

Regards

Peter Barber | Director City Futures

Subject: SG - Bayside Comments on Operational Noise Report (NV-1040)

Hi Peter,

As discussed over the phone earlier today, can you please provide comments (if any), on the Operational Noise Report (NV-1040) for the Sydney Gateway Project by the end of the week, COB Friday 13/8.

If no comments, can you please also confirm this with a written response.

Regards,

Daniel Pospischil
Design Interface Manager

1		IWC Mario Mouxuoris		22/2/21		At an appropriate stage of the development, consider the installation of permanent perimeter monitoring boreholes with associated monitoring program, around the old tip site for the purpose of ensuring any in-situ onsite contamination is sufficiently contained.			The operational noise and vibration report does not detail land contamination management. Montoring and management of contamination during construction within the former Tempe landfill is detailed in the Landfill Leachate Gas and Odour Managemnet Plan which has been submitted to IWC for review.

Appendix C SWTC Compliance

Reqt. Id	Reqt. Reference	Reqt. Text	Compliance Achieved	Evidence
SGW-4A-223	Volume 4A - Scope of Works and Technical Criteria Final	(viii) all measures necessary to achieve discharge water quality and mitigate noise and vibration during operation of Stage 1 as required by the Environmental Documents;	Yes	Section 3.5.3 of report SGWPW- JHSW-NWW-EN-NV-001001
SGW-4A-737	Volume 4A - Scope of Works and Technical Criteria Final	(iii) the Contractor's design for noise mitigation must accommodate the traffic volumes set out in Appendix B.2, Attachment B.2-3.	Yes	Section 3.5.1 and Section 6.2 of report SGWPW- JHSW-NWW-EN-NV-001001
SGW-4A-B11-48	Volume 4A - SWTC - Appendix B.11 Urban Design Final	(v) Noise Wall Guideline 2016;	Yes	Section 3.5.3.3 of report SGWPW- JHSW-NWW-EN-NV-001001
SGW-4A-C02-535	Volume 4A - SWTC - Appendix C.02 Contractor Documentation Schedule Final	(xvi) noise and vibration report,	Yes	Report SGWPW- JHSW-NWW-EN-NV-001001
SGW-4A-C02-605	Volume 4A - SWTC - Appendix C.02 Contractor Documentation Schedule Final	(iv) include final specialist engineering reports including durability, geotechnical and geotechnical parameters deviation, groundwater, hydrology, flooding, noise and vibration, materials testing, traffic, settlement assessment, monitoring and infrastructure protection;	Yes	Report SGWPW- JHSW-NWW-EN-NV-001001
SGW-4A-C02-914	Volume 4A - SWTC - Appendix C.02 Contractor Documentation Schedule Final	E. noise targets and limits;	Yes	Section 3.4 of report SGWPW- JHSW-NWW-EN-NV-001001

Reqt. Id	Reqt. Reference	Reqt. Text	Compliance Achieved	Evidence
SGW-4B-650	Volume 4B - Scope of Works and Technical Criteria Final	(iii) the Contractor's design for noise mitigation must accommodate the traffic volumes set out in Appendix B.2, Attachment B.2-3.	Yes	Section 3.5.1 and Section 6.2 of report SGWPW-JHSW-NWW-EN-NV-001001
SGW-4B-B11-95	Volume 4B - SWTC - Appendix B.11 Urban Design Final	(v) Noise Wall Guideline 2016;	Yes	Section 3.5.3.3 of report SGWPW-JHSW-NWW-EN-NV-001001
SGW-4B-B11-290	Volume 4B - SWTC - Appendix B.11 Urban Design Final	(a) The approach to noise wall location and design must be in accordance with the RMS document titled 'Noise wall design guidelines – Design guidelines to improve the appearance of noise walls in NSW' (RMS, 2016).	Yes	Section 3.5.3.3 of report SGWPW-JHSW-NWW-EN-NV-001001
SGW-4B-B41-19	Volume 4B - SWTC - Appendix B.41 Provisional Sum Work Final	(iii) Identification and specification of the at-property treatment required at the property and any ancillary works required to install the at-property treatment resulting from specific property conditions; and	Yes	Section 3.5.4 of report SGWPW-JHSW-NWW-EN-NV-001001

Appendix D Environmental and Sustainability Registers

State Conditions of Approval - Instrument of Approval

		Responsibility									
No	Condition	TfNSW	JHSW	Primary Discipline Owner (JHSW)	Secondary/Residual Discipline Owner (JHSW)	Discipline	Design Lot Package	Timing	Compliance Status	Evidence	Comments
E31	The Proponent must prepare an Operational Noise and Vibration Review (ONVR) to confirm noise and vibration control measures that would be implemented for the operation of the CSSI. The ONVR must be prepared in consultation with the relevant council(s), other relevant stakeholders and the community and must: (a) confirm the appropriate operational noise and vibration objectives and levels for surrounding development, including existing sensitive receivers; (b) confirm the operational noise predictions based on the final design. Confirmation must be based on an appropriately calibrated noise model (which has incorporated noise monitoring, and concurrent traffic counting, where necessary for calibration purposes). (c) confirm the operational noise and vibration impacts at adjoining development based on the final design of the CSSI, including operational daytime LAeo,1s houc and night-time LAeq, s houc traffic noise contours; (d) review the suitability of the operational noise mitigation measures identified in the documents listed in Condition A1 and, where necessary, investigate and identify additional noise and vibration mitigation measures required to achieve the noise criteria outlined in the NSW Road Noise Policy (DECCW, 2011) including the timing of implementation; (e) detail the measures to seek feedback on the noise and vibration mitigation measures and the process as to how changes requested from directly affected landowners would be responded to; and (f) procedures for the management of operational noise and vibration complaints. The ONVR is to be verified by a suitably qualified and experienced noise and vibration expert. The ONVR is to be undertaken at the Proponent's expense and submitted to the Planning Secretary for approval before the implementation of mitigation measures.		x	Design Manager	RESONATE	Operational Noise and Vibration	NV-1040	Prior to implementing mitigation measures	Closed	Section 3.4 of report SGWPW-JHSW-NWW-EN-NV-001001	
E32	Operational noise mitigation measures for residences identified: (a) as eligible for consideration of additional mitigation in the Sydney Gateway Road Project Response to Submissions Report Appendix B - Memo Sydney Gateway Road Project Submissions Report Revised Operational Modelling Figure 6 Receivers Eligible for Consideration of Additional Mitigation; and (b) as likely to exceed the noise management level in Condition E23(a); must be implemented within six (6) months of the commencement of construction at and in the vicinity of the impacted residences(s) to minimise construction noise impacts, and detailed in the Noise and Vibration CEMP Sub-plan for the CSSI, unless otherwise approved by the Planning Secretary in accordance with Condition E33. Additional mitigation must be prioritised so that those receivers with the largest likely exceedance of the noise management level receive the mitigation first.		x	Design Manager	RESONATE	Operational Noise and Vibration	NV-1040	Witihn 6 months after the commencement of construction	Ongoing	Section 3.4 of report SGWPW-JHSW-NWW-EN-NV-001001	
E33	Where the implementation of operational noise mitigation measures required by Condition E32 would not be implemented, the Proponent must submit to the Planning Secretary a report to justify this position. The report must detail the temporary measures that would be implemented to reduce construction noise impacts, until such time that the operational noise mitigation measures are implemented. The report must be endorsed by the ER and submitted to the Planning Secretary prior to the commencement of Work which would affect the identified residences. Note: Not having finalised detailed design is not sufficient justification for not implementing the proposed mitigation measures.		x	Design Manager	RESONATE	Operational Noise and Vibration	NV-1040	Prior to commencement of works affecting the identified residences.	Ongoing	Section 3.4.4 of report SGWPW-JHSW-NWW-EN-NV-001001	
E35	Within 12 months of the commencement of operation of the CSSI the Proponent must undertake monitoring of operational noise to compare actual noise performance of the CSSI against the noise performance predicted in the review of noise mitigation measures required by **Condition E31.**		x	Environment Manager Design Manager	RESONATE	Operational Noise and Vibration	NV-1040	within 12 months of operation	Open		
E36	The Proponent must prepare an Operational Noise Compliance Report to document this monitoring. The Report must include, but not necessarily be limited to: (a) noise monitoring to assess compliance with the operational noise levels predicted in the review of operational noise mitigation measures required under Condition E31; (b) a review of the operational noise levels in terms of criteria and noise goals established in the NSW Road Noise Policy 2011; (c) methodology, location and frequency of noise monitoring undertaken, including monitoring sites at which CSSI noise levels are ascertained, with specific reference to locations indicative of impacts on receivers; (d) details of any complaints and enquiries received in relation to operational noise generated by the CSSI between the date of commencement of operation and the date the report was prepared; (e) any required recalibrations of the noise model taking into consideration factors such as noise monitoring and actual traffic numbers and proportions; (f) an assessment of the performance and effectiveness of applied noise mitigation measures together with a review and if necessary, reassessment of mitigation measures; and (g) identification of additional measures to those identified in the review of noise mitigation measures required by Condition E31, that are to be implemented with the objective of meeting the criteria outlined in the NSW Road Noise Policy (EPA, 2011), when these measures are to be implemented and how their effectiveness is to be measured and reported to the Planning Secretary and the EPA. The measures must be implemented within the stated timeframes. The Operational Noise Report must be submitted to the Planning Secretary and the EPA within 60 days of completing the operational noise monitoring.		x	Environment Manager Design Manager	RESONATE	Operational Noise and Vibration	NV-1040	Within 60 days of completing operational noise monitoring	Open

Appendix F Design Verification

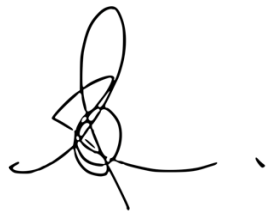

Design Verification

I, Andrew Parker, Technical Director at Resonate Consultants Pty Ltd have practiced as a consulting engineer in the specialist field of Acoustics for 15 years. My expertise is with transport infrastructure projects, with a particular focus on road projects. I have a Bachelors of Aeronautical Engineering. I am a Member of the Australian Acoustical Society.

I have read the requirements of the Minister's Condition of Approval No. E31 and in my professional opinion, I find this Operational Noise Mitigation Review (ONMR) report to be thorough, technically sound, and satisfactorily meets the requirements of Condition E31.

In conclusion, I verify and endorse the use of this ONMR report.

Signed

……..

Andrew Parker

Technical Director

Qualifications

Bachelor of Engineering (Aeronautical)
Diploma of Project Management
Certified Practicing Project Manager

Affiliations

Member of the Australian Acoustical Society
Member of Engineers Australia
Member of the Australian Institute of Project Management

Career history

Andrew is a Technical Director at Resonate with over fifteen years' experience providing specialist Acoustics and Vibration consulting advice to clients spanning the transportation, building, energy and maritime sectors. Andrew's project experience has included a broad spectrum, including leading the measurement, assessment and design for largescale linear infrastructure projects to significant industrial, commercial and residential building developments. Expertise in structural dynamics and diagnostic engineering allows Andrew to provide advice in cases where structural vibration or ground-borne noise may be a constraint, for example in developments over or adjacent to road and railway corridors or significant excavation or tunnelling works.
Andrew has partaken in many projects with a strong community and stakeholder engagement focus and has become skilled at conveying technically challenging information in an easy to understand way.
Andrew has developed strong project management experience through his involvement on numerous high profile projects and through accreditation as a certified practicing project manager.

Selected Recent Project Experience

- M6 Stage 1 Project – Andrew is currently engaged at the independent Acoustic Advisor for the M6 Stage 1 Project that incorporates twin 4 km tunnels in the Sydney's south east.
- Sydney Gateway Project – Andrew is currently the Noise and Vibration lead for the Sydney Gateway Project is currently completing the detailed design and at-property treatments fo
- Rankin Park to Jesmond Bypass - Detailed design of operational road traffic noise and vibration management strategy for structures and public utilities. This significant project in Newcastle includes a new 3.4 km section of motorway. Operational noise is a key environmental consideration with a requirement for noise barrier design and specification of at-property treatments.
- Heathcote Road Bridge and Linden Street Upgrade – Andrew provided lead noise and vibration advice for the tender design phase.
- Warringah Freeway Upgrade Project – Andrew provided operational and construction noise and vibration design advice to inform the tender design phase. The Warringah Freeway Upgrade will upgrade four-kilometres of the Warringah Freeway, between High Street at North Sydney and Willoughby Road at Naremburn providing a link between the future Beaches Link and Western Harbour Tunnel.
- Albion Park Rail Bypass - Andrew lead the preparation of the operational noise assessment for the tender and detailed design phases of the Albion Park Rail Bypass Project. The project involves the extension of the M1 Princes Motorway between Yallah and Oak Flats to bypass Albion Park Rail completing the link for a high standard road between Sydney and Bomaderry. The project alignment extended over 10 km. Key acoustic design considerations include operational road traffic noise management through the use of quiet

pavement design and noise barrier optimisation as well as assessment, inspection and scoping of property treatments for nearly 200 buildings. Significant stakeholder engagement was required to inform the community of acoustic issues through the use of Auralisations.

- Heathcote Road Upgrade – Andrew lead the detailed design operational road traffic noise assessment for this project. Key tasks included design of noise barriers and specification of at-property treatments.
- Grafton Bridge Project – Tender design and detailed design of a new bridge at Grafton crossing the Clarence River.
- Foxground and Berry Bypass – Post construction operational road traffic noise assessment for the 12.5 km section of motorway involved a significant noise measurement and modelling program in order to validate the as-built design as a follow up to the detailed design work previously completed by Resonate.
- Pitt Town Bypass - Andrew prepared the noise and vibration assessment for the Review of Environmental Factors covering construction and operational impacts. Work included detailed noise and vibration modelling and assessment. On-site measurements were also conducted in order validate the noise modelling. Andrew was subsequently involved in the detailed design for the project which also required a construction vibration management strategy to be prepared strategy for structures and public utilities.
- Sydney Metro City and Southwest Stage 1 - (reference design) of six underground train stations including operational noise emissions and reverberation time modelling including consideration of Over or Adjacent Station Development at Victoria Cross Station, Barangaroo Station, Pitt Street Station and Waterloo Station.
- Sydney Metro City and Southwest Barangaroo Station - Detailed Design of all services, environmental noise emissions and architectural acoustics.
- B-Line Project - Andrew provided construction noise and vibration management advice for the B-line Project which included a significant amount of Out of Hours Work. Key tasks included development of a Construction Noise and Vibration Management Plan, modelling and assessment of all construction noise and vibration impacts across the project area including specification of mitigation measures. Noise and vibration monitoring was also conducted.
- Kings Hill Water and Wastewater Infrastructure – Construction and operational noise and vibration specialist study for inclusion into the Kings Hill Water and Wastewater Infrastructure Proposal Environmental Impact Statement (EIS). The work included the deployment of 4 noise loggers across the 6.7 km length of the proposal.
- Sydney Harbour Bridge Cycleway - Andrew lead the preparation of the noise and vibration specialist study for input into the Review of Environmental Factors for the Sydney Harbour Bridge Cycleway upgrade project. The project comprised separate REFs for each of the northern and southern cycleway approaches. Key acoustic considerations include potential for extended out of hours construction works and cumulative impacts with concurrent projects being completed in the area. Operational road traffic impacts relate to potential merge lane modifications.

Comments Notes

Agreed Exception - NC-XXXX
New Non-Conformance - QX-XXXX

Comments should give a clear & concise view of the issue raised identifying chainage, reference, feature or geographic point.

If an agreed exception requires an amendment, any change should be highlighted in red text. If part of an agreed exception has been designed out or is no longer applicable, strikeout the relevant text from the agreed exception and elaborate in Column L.

Background								Response								Client Review Acceptance		Close Out		
Item No	Discipline	Tender AAJV NC numbers	Subject	Design Departure	Affected Locations	SWTC Section Reference	Zone	Name / Responder	Response Issue Date	Comment Type	Reason for Departure/ Justification	Internal Status	Evidence & Record of Discussion	decided by (date) if required	Date submitted via letter to TfNSW	IV	TfNSW	Reviewer's Closure	Status	Closure Date	Outcome - Workshop on 18/8/21
DD-2115	NV			The overlap between adjacent acoustic walls is less than the 4D specified in the SWTC.	Noise Wall overlap at New Link Road Inte	SWTC App D.1 Section 13(c)(i)	2000	Raymond Sim		Non-Compliance	The SWTC requires the overlap of acoustic walls to be 4 times the gap width. This is not achieved for the walls on either side of the shared path at New Link Road intersection due to limited boundary space available. The gap between the two walls is 4.1m at the bottom and 4.75m at the top. The full height overlap length provided is 12.3m which is 2.6 times the full gap (4.75m), 3 times the bottom gap (4.1m). noise modelling is currently underway to confirm if the proposal is consistent with the EIS.	Approved by TfNSW	As agreed in Road Geometry SME Meeting – No. 019, 31 May 21. See meeting minutes SGW13-JHSW-NWW-RD-MTM-000019, Once noise modelling is complete and on the bases it confirms the the proposal is consistent with the EIS, TfNSW will seek approval from the environmental team for this departure		9/7/21	-	The Principal has no objection to the following design departures and will be formally incorporating these items in the STWC Appendix B1 Agreed Exceptions in the D&C Deeds via a Variation Order. As agreed between the Parties, there are no delay or cost implications arising from these departures and the Contractor will not bring any Claim arising out of or in connection with these departures. DD-2115 - no technical objectionsas per TB correspondence SGW01-JHSW-TFNSW-RFI-000036.08. It is considered that the sentence "noise modelling is currently underway to confirm if the proposal is consistent with the EIS." in the Justification column is incorrect.	LETTER-SGWPW-TFNSW-JHSW-LETTER-000075	Reopened	19/8/21	
DD-3546	NV		Traffic Volumes for Noise Modelling	SWTC 5.19 a)(ii) describes that noise mitigation must accommodate the traffic volumes set out in SWTC Appendix B.2, Attachment B.2-3. Appendix B.2 gives AM and PM peak period traffic volumes whereas the noise assessment requires 15-hour and 9-hour traffic volumes as per the values presented in Appendix E of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3. Given the lack of correlation and suitability of the data in SWTC Appendix B.2, it is proposed to utilise the traffic volumes presented in Appendix E of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3.	Project Wide	SWTC Appendix B.2, Attachment B.2-3	0	Andrew Parker		Non-Compliance	Lack of correlation and suitability of the data in SWTC Appendix B.2,	For Approval	TfNSW Closed accepted this departure via response to SG-20-JSJ-0000-NW-RFI-0002-01 & SG-20-RES-0000-NV-RFI-0001-01								21-Jan-21	July

Project Name:	Sydney Gateway Stage 1&3	RFI No.:	SG-20-AAJ-2000-RD-RFI-0058-02
From:	JHSW	Attention to:	TfNSW
Issued to:	TfNSW	Respond by:	18/06/2021
Subject:	Noise Wall Overlap	Priority:	P1
Reference Information:	SWTC App D.1 Section 13(c)(i)		

RFI Description

Background:

SWTC App D.1 Section 13(c)(i) requires that:
In additional to the minimum requirements for breaks in acoustic walls contained in the RMS Noise Wall Design Guideline, at gaps in acoustic walls the Contractor must design and construct the walls such that they have: (i) an overlap with the adjacent acoustic wall at full height, for a length of 4 times the distance between the overlapping acoustic walls.

The overlap of 4D (4 times the opening) is unable to be achieved for the walls adjacent to the shared path at the New Link Road Intersection. For these inclined walls a 4.1m gap at the bottom and 4.75m gap at the top of the wall is achieved, the full height overlap distance achieved is 12.3m as shown in Figure 1 below.

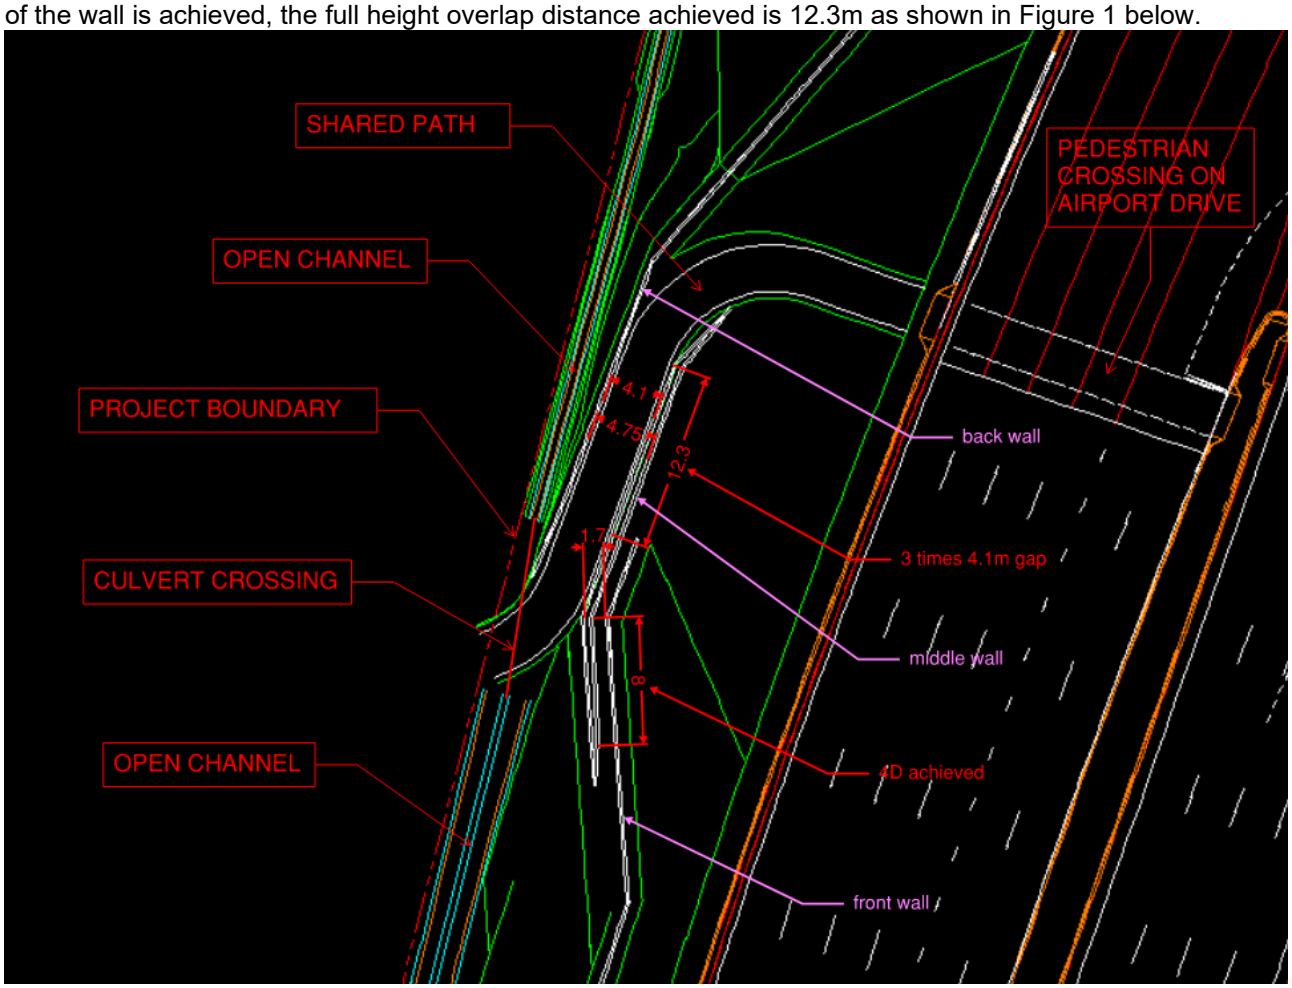

Figure 1 Location and key features of subject noise wall and the surrounding constraints

The gap in the noise wall is required at the New Link Road intersection to provide for shared path connection from the Tempe Reserve (west of the Sydney Gateway project) and the New Link Road which leads to the Freight Terminal, future Northern Freehold Road and Council Link Road.

The proposed noise wall arrangement involves three separate walls, which requires two overlapping sections. The three walls are designed to incorporate urban design principles to give a sense of openness by providing a vertical slant on the middle wall and to address CPTED requirements by providing passive surveillance through the use of transparent panels.

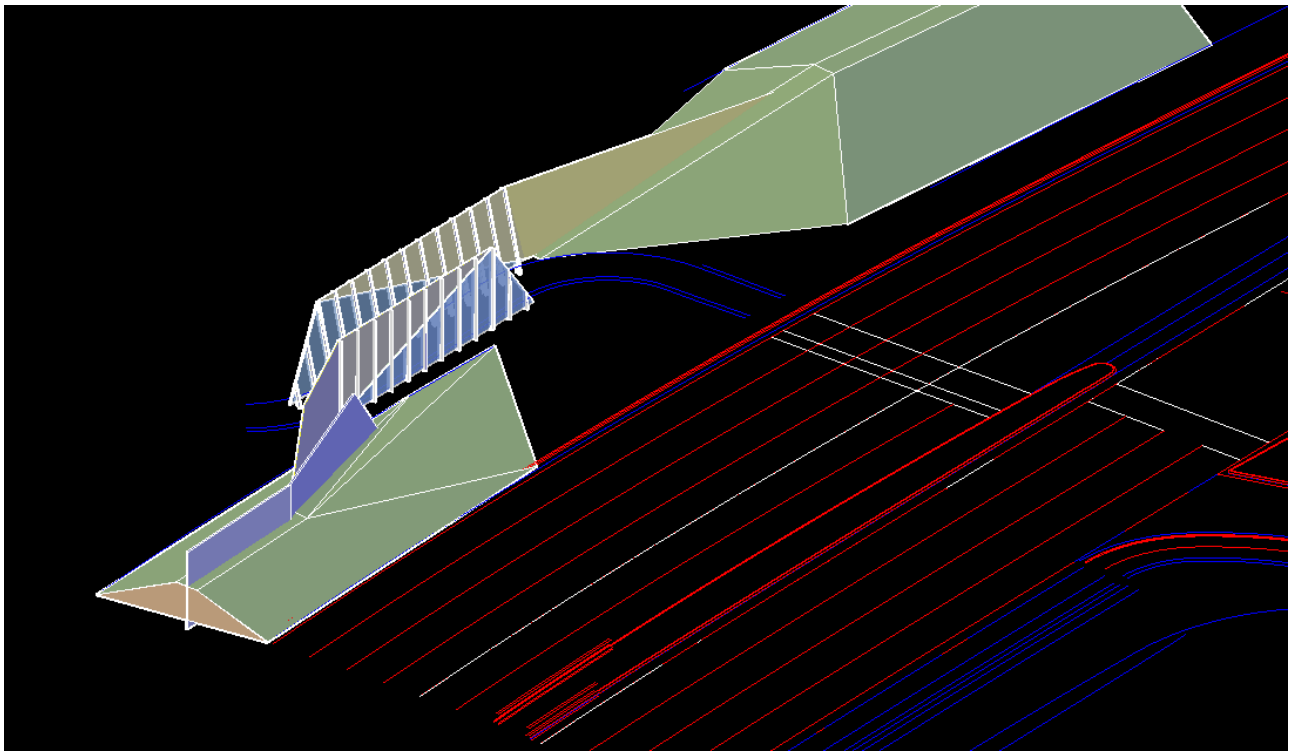

Figure 2 Urban design perspective of the noise wall, note the alignment of the walls have changed but the principal remains.

The overlap distance of 4D is achieved between the front and the middle wall, but not achieved between the middle and the back wall. This is because the extent of the back wall is constrained on the southern end and the extent of the middle wall is constrained on the northern end. This limits the maximum overlapping distance that can be achieved.

Constraints in the area include:

- Project boundary
- Location of the pedestrian crossing which is governed by the intersection layout and the project boundary on the at the New Link Road roundabout.
- The combination of noise wall and mound design is a key feature of JHSW's proposal.
- Drainage channel required along the boundary which involves a culvert crossing under the shared path

The current design maximises the overlapping length through:

- Minimised opening, the shared path is designed with 3.5m width as required by the SWTC and 300mm clearances are provided on either side of the path to the front of the wall. This results in an opening width of 4.1m at the bottom of the wall. Due to the vertical slant on the middle wall, the opening between the top of the walls is 4.75m wide.
- Maximised length for both walls, the back wall is extended for as far south as possible and the middle wall is extended for as far north as possible. To further maximise the length of overlap, the middle wall incorporates a flare on the end section where the wall slopes down.

Options were investigated to improve the full height overlap distance, which include:

1. Extending and flaring out the back wall where it slopes down. This could potentially add 3m to the full height overlap, however, the foundation of the noise wall would clash with the drainage culvert.

Therefore, this option was not adopted. The additional 3m is also insufficient to resolve the non-conformance.

2. Extending the middle wall and wrap around the corner of the shared path. This would increase the opening gap significantly and would require a much longer overlapping distance and extends the wall closer to the crossing, which would in turn adversely impact the urban design as the openness for the area is lost. Therefore, this option was not adopted.

It is noted that the TfNSW Noise Wall Design Guideline requires the overlap should be at least three to four times the opening width. The current design achieves an overlap of 3D at the surface level opening of the two noise walls and 2.6D at the top of the two noise walls due to the vertical slant on the middle wall.

The operational noise modelling with no noise barrier shows a total of 93 residential receiver buildings within NCA03 trigger for consideration of mitigation. With the implementation of the proposed noise barrier design, the noise modelling shows a total of 13 residual receiver buildings in NCA03. This is a reduction of 80 receiver buildings. The images below show the number of residential receivers that trigger for consideration of mitigation with no noise barrier and with the implementation of the noise barrier.

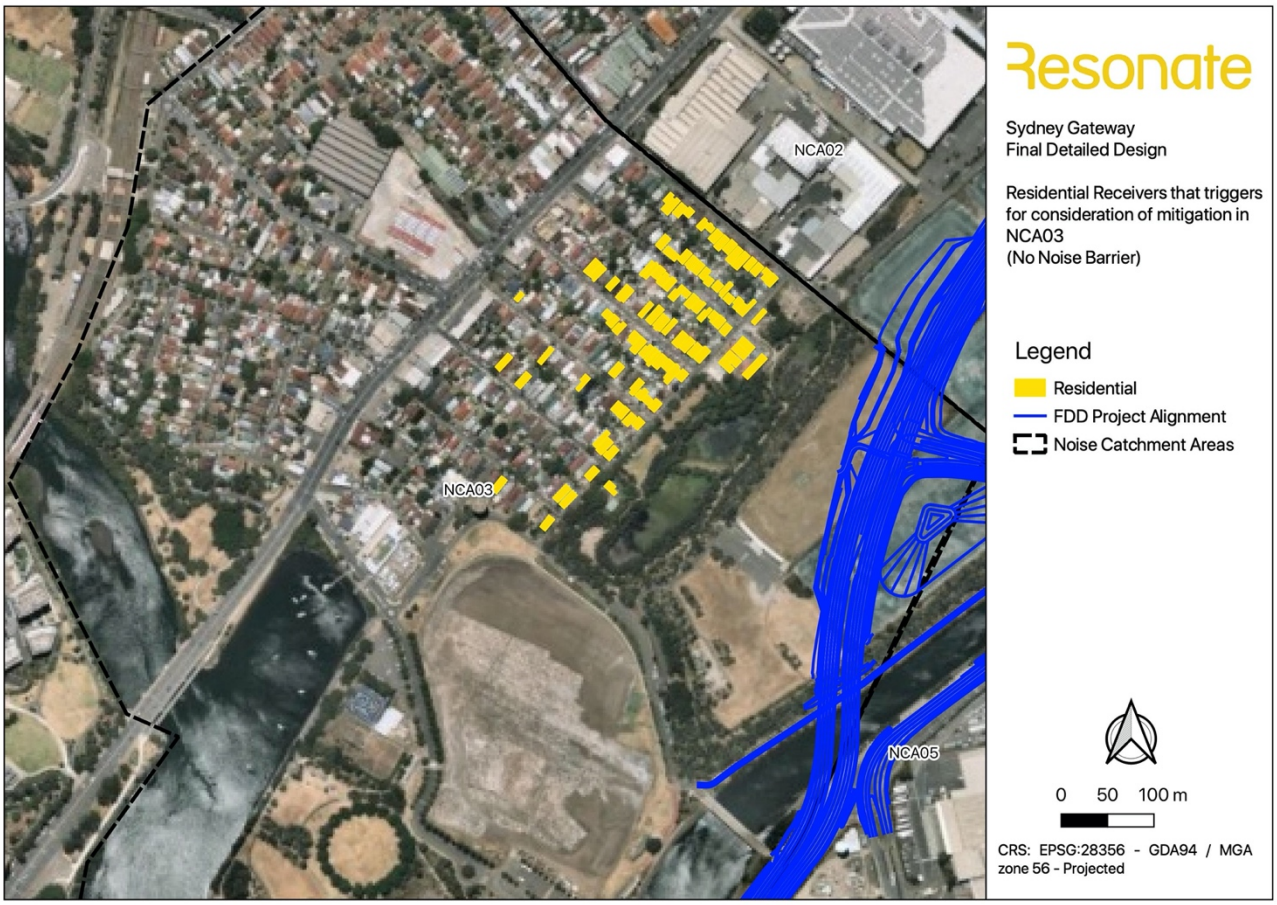

Figure 3 - Residential Receivers that triggers for consideration of mitigation in NCA03 (No Noise Barrier)

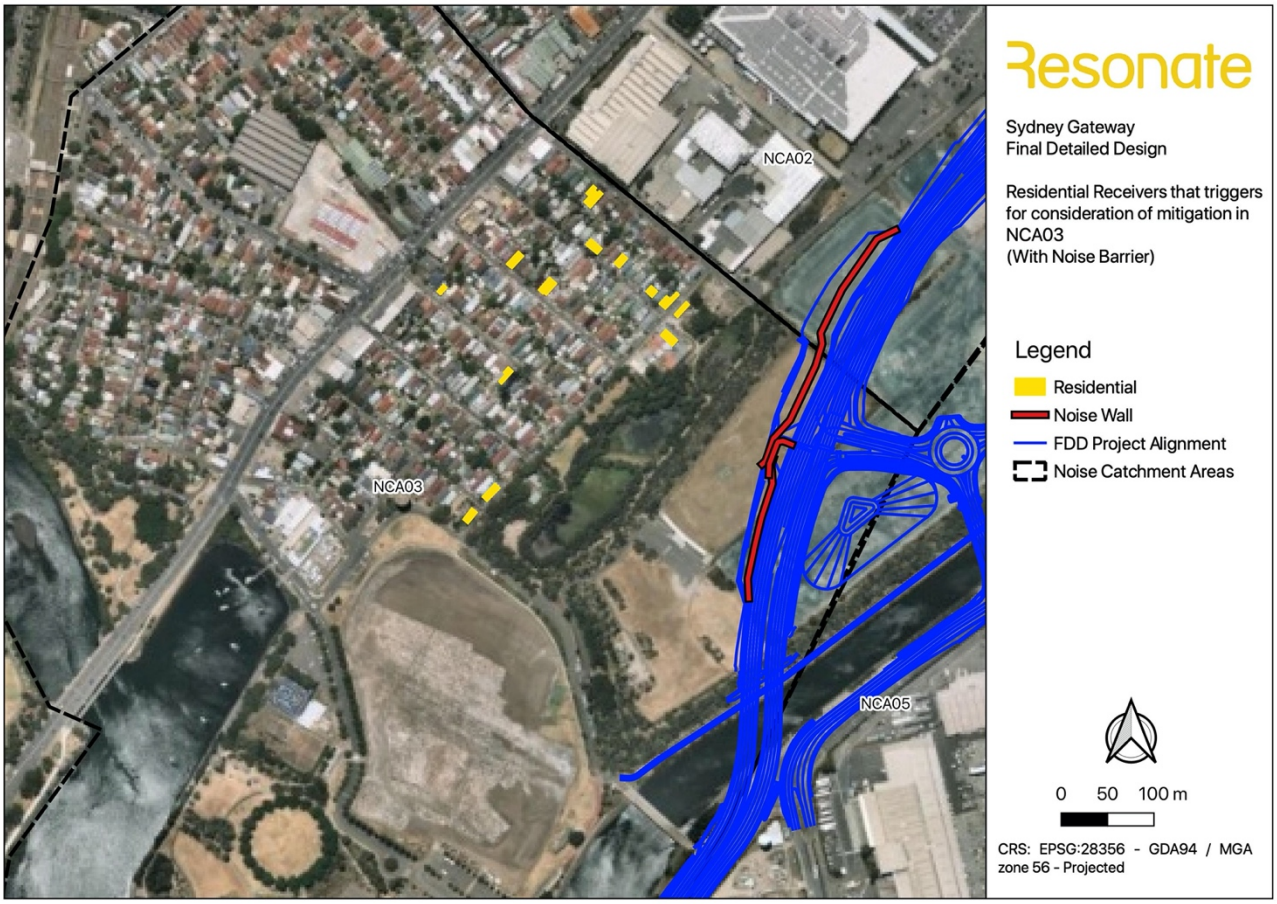

Figure 4 - Residential Receivers that triggers for consideration of mitigation in NCA03 (With Noise Barrier)

Comparison with EIS/Concept Design and DCD Design

In the EIS and the Concept Design, the noise barrier was a single alignment without any opening. The opening was introduced in DCD to accommodate the shared path connection to the west of the project. The number of residential receivers that trigger for consideration of mitigation for EIS was 30.

In the DCD design, the gap between the noise walls was 4.5m, with an overlap length of 16.36m, which is approximately 3.6D. See Figure 5 below.

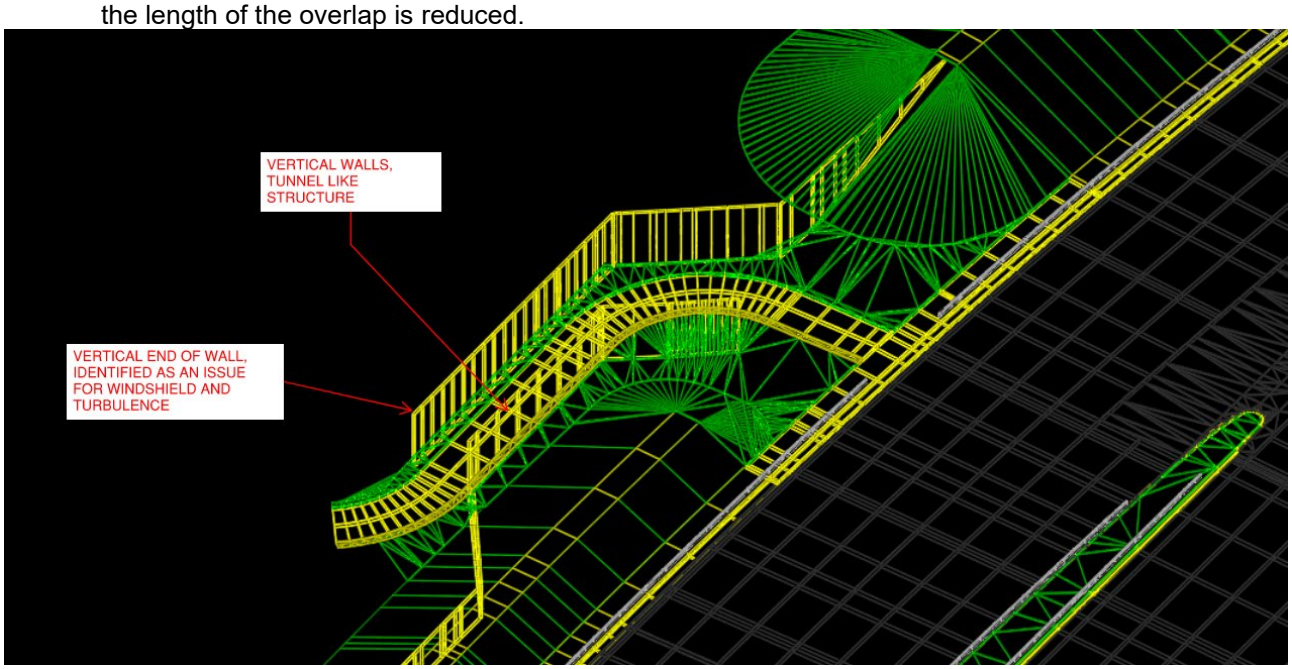

Figure 5 – Noise wall overlap in DCD design

The number of residential receivers that trigger for consideration of mitigation for the DCD design was 21.

However, this design had the following issues:

- Vertical walls for the front and the back of the noise wall, which created a tunnel like structure for the users.
- The back wall was designed with a vertical end, which was identified as an issue for windshield and turbulence and was advised by the specialist to change to a taper of 1:1. By incorporating this taper, the length of the overlap is reduced.

Refer to attached letter from Resonate for a summary of comparison between the EIS, DCD and FDD design.

Question:

Could TfNSW please confirm that the overlap of 12.3m is acceptable for the two noise walls on either side of the shared path at New Link Road, as shown in Figure 1*.*

Subject: **RE: RFI - SG-20-AAJ-2000-RD-RFI-0058-02 - Noise Wall Overlap**

Hello all

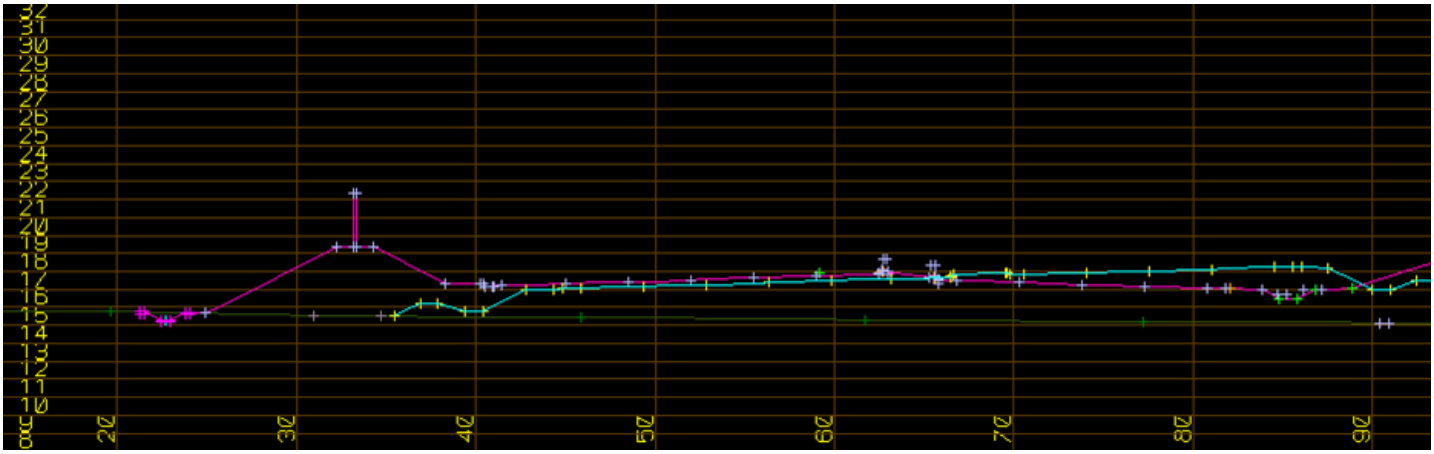

Thank you for your review and comment.

JHSW provide the following response to explain the range of design changes between reference /EIS design, to DCD and to finally what is represented as the FDD design (same as SDD design) to explain and quantify the changes as requested by TfNSW.

1. Noise Mound and Noise Barrier Design Summary

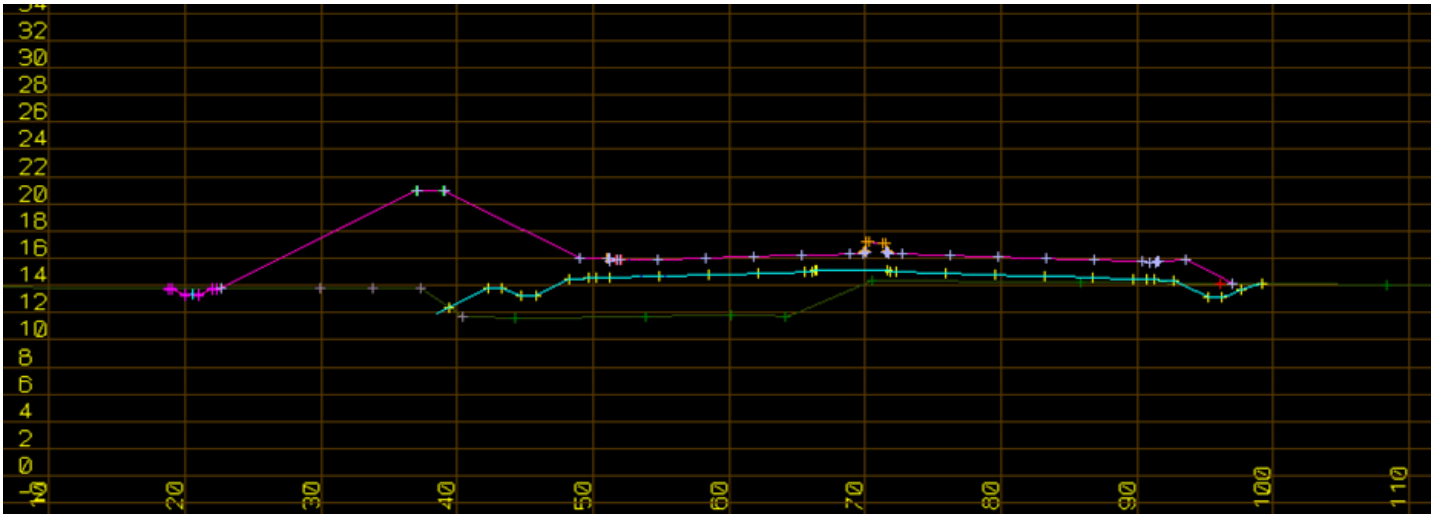

- ***From Reference Design to DCD:***
  - The noise barrier design south of the intersection is roughly the same for both. The DCD design is approx. 250mm higher than REF design. DCD design incorporated 2.0m mound + 3.0m wall. The relative noise barrier position is differed by approx. 2m.

  See below, pink is DCD design, cyan is REF design. The noise barrier is not modelled in the REF design, but assume to be just outside the earthworks/channel.

  - North of the intersection, the DCD design is approx. 1.2m higher than REF design. The location of the noise barrier is again approximately the same. DCD design incorporated 5m mound with no wall.

    See below, pink is DCD design, cyan is REF design. The noise barrier is not modelled in the REF design, but assume to be just outside the earthworks/channel.

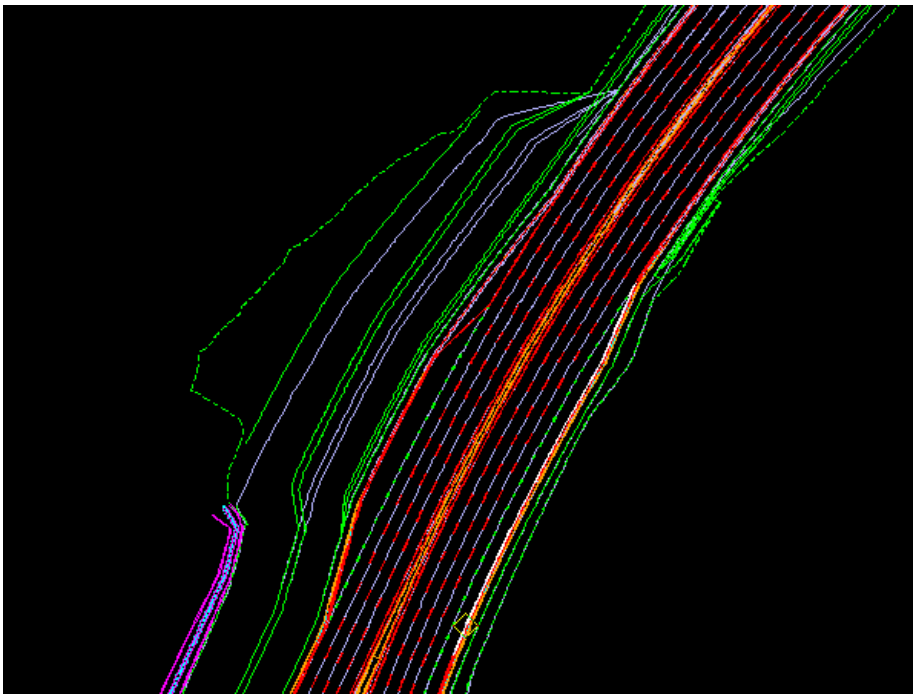

- ***From DCD to FDD:***
  - Apart from the overlap design, the location of the noise barrier design is the same except for southern and northern ends, where a channel is introduced between the road and the barrier, so the barrier in FDD is further away from the road. 2:1 taper is added in the FDD design for the southern end.

  See below, southern end, magenta is the FDD wall design, light purple is DCD design. FDD is approx. 1.5m further away from the road.

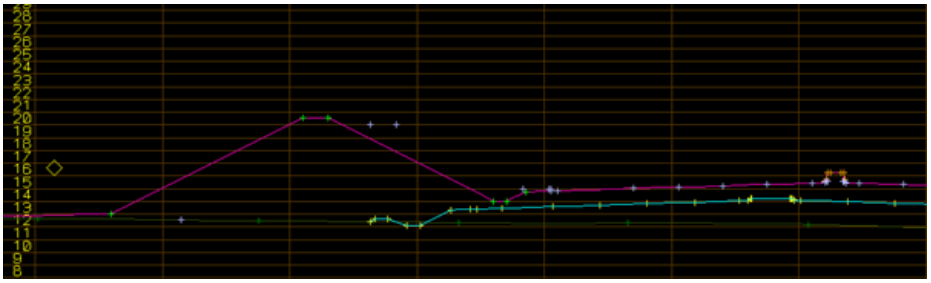

See below, northern end, green is the FDD mound design, light purple is DCD design. FDD is approx. 4m further away from the road.

- The other change is the “5m” mound north of the intersection in FDD design is slightly higher than DCD design. DCD design was approx. 5.0m above edge line, FDD design is approx. 5.0m to 5.5m above edge line.

See below, light purple (DCD) is lower than pink (FDD)

2. Horizontal and Vertical Alignment along Tempe Tip

- ***From REF design to DCD:***
  - The horizontal alignment between the two are very similar.
  - The vertical alignment for DCD is approx. 250mm to 1.3m higher than REF design.
- ***From DCD to FDD:***
  - No significant alignment change

In summary, there have been a range of changes, both to the alignment and the noise mound/wall design from the EIS and through design development between DCD and FDD all which contributed to the noise modelling assessment provided.

It is impractical to prepare noise models to quantify each change and as such maintain our position that the comparisons provided to the EIS, DCD and FDD design stages are sufficient to support a departure from the 4D overlap requirement, noting less receivers are impacted as a result of our design.

We kindly ask TfNSW to review and approve, noting the restrictions onsite to achieve a 4D overlap whilst meeting various other obligations including place/urban design.

Response requested by 2/7/21.

*please note the methods by which the noise modelling has been undertaken is not the subject of this RFI, this is to be addressed per the design review process for NV-1040 Operational Noise & Vibration Report, which has been issued as FDD for review and verification.

Kind Regards

Subject: **RE: RFI - SG-20-AAJ-2000-RD-RFI-0058-02 - Noise Wall Overlap**

Hi Leanne,

Can you please provide more information on how the number of receivers was reduced for each stage.

Based on the RFI, the number of residential receivers that trigger for consideration of mitigation are:

- EIS – single wall alignment without any opening = 30 receivers
- DCD – gap width between the noise walls of 4.5m, and an overlap length of 16.4m (approximately 3.6D) = 21 receivers. How does introducing a gap in the wall result in a lower number of receivers? What contributed to the reduced number of receivers from EIS to DCD?
- SDD – gap width between the noise walls of 4.1m at the bottom, and 4.75m at the top, and an overlap length of 12.3m (approximately 3D at bottom and 2.6D at the top) = 15 receivers. How does having a shorter length of overlap result in a lower number of receivers from SDD to DCD? What contributed to

the reduced number of receivers from SDD to DCD?

The statement in the RFI from Resonate says "the reduction in the number of triggered residential receivers could be due to a range of design variations such as height, length and alignment". This needs to be further explained and quantified to enable review of the RFI.

Thanks and kind regards,

Project number: S200118
Reference: S200118LT1

Pushan Rakkar
Sydney Gateway

Dear Pushan,

Sydney Gateway Project Design and Construction
Response to Transport for NSW's RFI (Reference No.: SGWS1-JHSW-TFNSW-RFI-000036.01)

The number of residential receivers that trigger for consideration of mitigation with the EIS/MDP NW02 solid noise barrier and the DCD and FDD overlap noise barriers are presented in Table 1 below.

Table 1 EIS/MDP, DCD and FDD Triggered Receivers in NCA03

Number of residential receivers that trigger for consideration of mitigation		
EIS/MDP NW02 solid noise barrier	**DCD overlap noise barrier**	**FDD overlap noise barrier**
30(1), (2)	21(2)	15(2)

(1) This number of residential receivers has been extracted from Table 57 of Sydney Gateway Road Project EIS/MDP Technical Working paper 2.

(2) The count of receivers represent the number of individual floors (at ground and first floor only) of the affected buildings.

It should be noted that the number of receivers presented in the JV's RFI is the count of individual buildings. The number of individual floors (at ground and first floor only) of the affected buildings have been presented in the table above allow for a like for like comparison between the EIS/MDP NW02 noise barrier and the FDD overlap noise barrier.

The above table shows that the number of residential receivers that trigger for consideration of mitigation is reduced by half with the FDD overlap noise barrier. Understandably, the reduction in the number of triggered residential receivers could be due to a range of design variations such as height, length and alignment. However, that does not detract from the fact that the implementation of the FDD 3D overlap noise barrier has not increase the number of residential receivers that trigger for consideration of mitigation from the EIS/MDP assessment.

An earlier DCD overlap noise barrier design resulted in 21 residential receivers in NCA03 trigger for consideration of mitigation. This shows that the FDD noise barrier design has reduced the residual receivers by 6 from the DCD noise barrier design.

Please let me know if you have any queries or wish to discuss the above.

Yours sincerely,

Raymond Sim

Request for Information (RFI)			
Project Name:	Sydney Gateway Stage 1&3	RFI No.:	SG-20-RES-0000-NV-0001
From:	Resonate Consultants	Attention to:	Mohammed Al-dawod
Issued to:	TfNSW	Respond by:	21/01/21
Subject:	Traffic Volumes for Noise Modelling	Priority:	P2
Reference Information:	• SWTC 5.18 a(iii) & Appendix B.2 • Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3		

RFI Description

Background:

SWTC 5.18 a(iii) describes that noise mitigation must accommodate the traffic volumes set out in SWTC Appendix B.2, Attachment B.2-3.

Appendix B.2 gives AM and PM peak period traffic volumes whereas the noise assessment requires 15-hour and 9-hour traffic volumes as per the values presented in Appendix E of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3.

Given the lack of correlation and suitability of the data in SWTC Appendix B.2, it is proposed to utilise the traffic volumes presented in Appendix E of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3.

Question:

Can TfNSW confirm the traffic volumes provided in Appendix E of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3, should be used for operational noise modelling purposes?

Attachment? NO ☒ YES ☐

Hi Michael,

Please apply the traffic volume information from Appendix E of the EIS Technical Working Paper 2, Noise and Vibration for operational noise modelling.

Please find attached GIS shapefiles that contain the Appendix E of the EIS information for 9hr and 15hr traffic volumes in an electronic format. I don't know why this was done in GIS and not as an Excel spreadsheet.
However, please ensure you verify the accuracy of the electronic files with the EIS volumes.

Thanks and kind regards,

Issued to:	TfNSW	Respond by:	19 March 2021
Subject:	Traffic Volumes for Noise Modelling	Priority:	P1
Reference Information:	CoA 31 b) Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3		

RFI Description

Background:

CoA 31 b) requires road traffic noise levels to be predicted using an appropriately calibrated noise model. This has been achieved by benchmarking the JHSW No-Build noise level predictions against the EIS No-Build (without project / existing roads only) noise modelling scenarios.

JHSW wish to undertake an additional level of validation by comparing predictions to the EIS Validation Noise Model. This noise model would include the traffic volumes that were measured concurrently with the unattended noise monitoring during the preparation of the Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3. We note that Table 32 of Environmental Impact Statement - Technical Working Paper 2 – Noise and Vibration (November 2019) – Stage 1 and Stage 3 refers to the measured traffic volumes and vehicle speeds, however these are not presented in the document.

Question:

Please can TfNSW provide the operational noise model (SoundPLAN) used for validation of noise level predictions in the EIS. The noise model would include measured traffic volumes, speeds and noise monitoring locations for road traffic noise validation.

Hi,

The SoundPLAN model that includes the measured traffic flows / monitoring is not available to be shared with the JV; however, please find attached the following information:

- a Shapefile that includes the exact positions of the noise loggers relative to the existing roads and the road strings with associated measured traffic data included.
- photographs of the noise logger installation locations (i.e. photograph of the noise loggers in situ at the time of the survey).

Can you please advise if this is sufficient.

Thanks and kind regards,

Subject: **RE: RFI - SG-20-RES-0000-NV-RFI- 0002-01 - Traffic Volumes for Noise Modelling**

Hello all

Thank you for providing a response to NV-RFI- 0002.

- *The information provided includes a noise model which incorporates Traffic Volumes for the prediction of road traffic noise levels for the future scenarios (Time horizons being 2026 and 2036).*
- *Our request relates specifically to the provision of another noise model that incorporates traffic volumes that were measured on site as part of the preparation of the EIS operational noise report. These traffic volumes would have been measured simultaneously with road traffic noise. The purpose of these Traffic Volumes is for validation of the noise model.*

Please can TfNSW provide the noise model incorporating the 'Measured' traffic volumes (not future predicted). If TfNSW does not have this information to hand it may be necessary to request it from the Acoustic Consultants who conducted the operational noise modelling for the EIS noise and vibration assessment report. This should be provided in a SoundPLAN noise model format

Kind Regards

Leanne Taylor

Appendix H At-Receiver Noise Treatment Guideline Package Table

Construction	Treatment Package Type				
	1	2	3	4	5
Exceedance, dBA	**1-5**	**6-8**	**9-11**	**12-14**	**>14**
All	• Optional ceiling fans[1] • Mechanical ventilation (MV)[2] • New acoustic seals for windows • Seal around window architraves / door jambs • Seal all vents and openings	• As per Category 1 treatments • External solid core door (40mm) with perimeter acoustic seals, drop seals and threshold seals			
Brick veneer or double brick Window area less than or equal to 20% floor area		For 6 dBA exceedance: • 6.38mm laminate and roof insulation (R4.0 215mm thick) or 6.5mm lam with acoustic interlayer For 7 dBA exceedance: • 8.5mm lam with acoustic interlayer or 10.38mm lam For 8 dBA exceedance: • 8.5mm lam with acoustic interlayer or 10.5mm lam with acoustic interlayer or 10mm acrylic panel with nominally 100mm gap or >4mm secondary window with 100mm gap or equivalent	• Roof insulation (R4.0 215mm thick) For 9 dBA exceedance: • 8.5mm lam with acoustic interlayer or 10.38mm lam Otherwise: • 10.5mm lam with acoustic interlayer or 10mm acrylic panel with nominally 100mm gap or >4mm secondary window with 100mm gap or equivalent	• >4mm secondary window with 100mm gap, or equivalent • Roof insulation (R4.0 215mm thick)	• >6mm secondary window with nominally 100mm gap, or equivalent • Roof insulation (R4.0 215mm thick)
Brick veneer or double brick Sliding door area less than or equal to 50% wall area	• 6.38mm lam, or equivalent	• 6.5mm lam with acoustic interlayer, or equivalent • Roof insulation (R4.0 215mm thick) Or • 8.5mm lam with acoustic interlayer, or equivalent	• 8.5mm lam with acoustic interlayer or >4mm secondary window with nominally 100mm gap, or equivalent • Roof insulation (R4.0 215mm thick)	• >6mm secondary window with nominally 100mm gap, or equivalent • Roof insulation (R4.0 215mm thick)	• >6mm secondary window with nominally 100mm gap, or equivalent • Roof insulation (R4.0 215mm thick)
Lightweight Window area less than or equal to 20% floor area	• Seal subfloor • Roof insulation (R4.0 215mm thick)	• As per Category 1 treatments For 8 dBA exceedance: • 10mm acrylic panel with nominally 100mm gap, or equivalent • Re-sheet wall lining (1x 6mm fibre cement sheeting with nominal board weight of 11 kg/m^2 and 1 x 13mm plasterboard with nominal board weight of 10.5 kg/m^2 to finish, or equivalent) • Wall insulation (R2.7 90mm thick) Otherwise: • 10mm acrylic panel with 100mm gap, or equivalent • Additional wall lining (1 x 13mm plasterboard with nominal board weight of 10.5 kg/m^2 to finish, or equivalent)	• As per Category 1 treatments • 10mm acrylic panel with nominally 100mm gap, or equivalent • Re-sheet wall lining (1x 6mm fibre cement sheeting with nominal board weight of 11 kg/m^2 and 1 x 13mm plasterboard with nominal board weight of 10.5 kg/m^2 to finish, or equivalent) • Wall insulation (R2.7 90mm thick) • Resilient mount to isolate wall lining and stud	• As per Category 1 treatments • >4mm secondary window with nominally 100mm gap, or equivalent • Re-sheet wall lining (1x 6mm fibre cement sheeting with nominal board weight of 11 kg/m^2 and 1 x 13mm plasterboard with nominal board weight of 10.5 kg/m^2 to finish, or equivalent) • Wall insulation (R2.7 90mm thick) • Resilient mount to isolate wall lining and stud	• As per Category 1 treatments • >6mm secondary window with nominally 100mm gap, or equivalent • Re-sheet wall lining (1x 6mm fibre cement sheeting with nominal board weight of 11 kg/m^2 and 1 x 13mm plasterboard with nominal board weight of 10.5 kg/m^2 to finish, or equivalent) • Wall insulation (R2.7 90mm thick) • Resilient mount to isolate wall lining and stud

Note 1: Ceiling fans should have Direct Current (DC) electric motors to minimise noise.

Note 2: Mechanical ventilation (MV) should be installed so that fresh air is ducted from an unaffected building facade. Mechanical fan noise should meet the recommended noise levels in AS2107.

Appendix I At-Property Noise Treatment Process

At Property Noise Treatment Process

Step	Activity	Who	Indicative Timing
1	Property inspected	Resonate	Within 2 weeks of property owner acceptance
2	Reports provided to JHSWJV for review & update register	Resonate	Within 2 weeks of completed inspection
3	Reports reviewed JHSWJV	JHSW	1 week
4	JHSW submits reports and builder quotations to Transport via Teambinder	JHSW	Every Friday
5	Transport review reports and approves / provides feedback	Transport	10 days
6	JHSWJV Builder/s engaged (from a Panel) to carry out approved scope of works	JHSW	1 week
7	Property owner provided with Scope of Works and Acceptance Form	JHSW (Comms)	0.5 weeks
8	Property owner review and signs Acceptance Form for treatment and returns to JHSW	Property owner	2 weeks
9	Signed Acceptance Form received from property owner. Scope of Works Package handed to JV Property Manager to commence installation process	JHSW (Property)	2 weeks
10	Scope of works adjusted (if necessary) based on signed Form and quote confirmed	Builder	1 week
11	**Transport instructs JHSWJV to carry our works as Provisional Sum work**	**JHSW**	**1 week**
12	JHSW contacts owner to schedule final check measure, prior to installation	JHSW (Property)	
13	Builder procures material	Builder	1-2 weeks
14	Owner signs Property Works Contract to allow property access	Builder	
15	Builder provides JHSW with a copy of the Property Works Contract	Builder	1 week from completion of works
16	Noise treatment installations commence	Builder	1-2 weeks
17	Property owner signs Deed Poll Release at completion of installations and sends back to JHSW after completion of works	Property Owner	1 week
18	All documentation finalised and provided to Transport via TeamBinder	JHSW (Property)	Every Friday
