Enabling Works	Early construction activities, early procurement activities and other preparatory activities required to be undertaken before the commencement of construction, including but not limited to: • Establishment of temporary site access roads, minor clearing of vegetation, establishment of temporary site compounds, laydown areas and parking areas, installation of environmental controls, relocation of services, and other activities that are not likely to have a material adverse impact on the environment. • Establishment of permanent site access roads, bulk earthworks, establishment of permanent site compounds, laydown areas and parking areas, installation of environmental controls, relocation of services, and other activities that are not likely to have a material adverse impact on the environment. • Geotechnical investigations, surveying, potholing, test excavations, installation of groundwater monitoring bores, and other activities that are not likely to have a material adverse impact on the environment. • Minor realignment of existing utilities, fencing, hydrological drainage, bulk earthworks, and other activities that are not likely to have a material adverse impact on the environment. • Minor adjustments to existing road infrastructure, and other activities that are not likely to have a material adverse impact on the environment.

Appendix B – Environment and sustainability policies

HumeLink East

acciona | GENUS

Environment & Sustainability Policy Statement

This policy statement applies to the HumeLink East Project.

AGJV's commitment to Environment & Sustainability focuses on our shared purpose to invest in, develop and operate infrastructure assets that make our planet more sustainable.

AGJV will develop and deliver regenerative infrastructure and assets that respond to global challenges and trends that affect our business, guided by principles established in our Sustainability Master Plan.

AGJV will continually improve the design, delivery and operation of our Projects with an intent of achieving net positive impacts within the construction footprint, the adjoining environment and the wider community.

AGJV is committed to:

- Taking a preventive approach to reduce the extent of our operations, through minimising pollution and impacts to local biodiversity and heritage.
- Mitigating the adverse effects of climate change through design and operation of our assets
- Improving efficiency across our activities to meet AGJV's goal of absolute net zero by 2050 through reducing energy and material consumption.
- Contributing to the Circular economy through reuse of materials, recycling and recovery of waste
- Reducing our reliance and overall consumption of potable water through water efficiency measures and use of alternative water sources
- Complying with legislative and client requirements that relate to business activities.
- Working with our supply chain to achieve sustainability outcomes in our workforce, for local businesses and in the products and services we procure.
- Facilitate economic prosperity through developing local workforce for the future renewable energy industry sector.
- Working with our clients, the local community, and stakeholders to develop regenerative solutions, sustainable practices and implement innovative outcomes.
- Include sustainable principles in the procurement process, by including social, environmental, and economic requirements in procurement documentation.
- Fostering a genuine commitment to environmental protection and a culture of best practice in all employees
- Regular monitoring and auditing of processes and activities in line with our AGJV Integrated Management System and objectives to identify preventive actions to enhance performance.

We are committed to maintaining, reviewing, and continually improving our environmental management systems to meet the requirement of the current standards related to the development, design, construction, maintenance, operation and asset management of all our activities.

Carel Nagel
Project Director (PD) Acciona Genus Joint Venture.

UGL

Environment Policy

UGL management systems and processes underpin our commitment to achieving our One HSE Culture based on Risk Management, Standards, Communication and Involvement.

We prioritise environmental risk management by

- Taking steps to prevent pollution, conserve natural resources, protect cultural heritage, minimise waste and drive energy efficiency.
- Ensuring our operations, products and services comply with applicable legal and other requirements.
- Regular reviews of performance, identifying and implementing corrective and preventive actions that contribute to continually improving the environmental performance of our operations, products and services.

We set and reinforce high standards by

- Setting objectives and targets to reduce environmental risk and improve sustainability.
- Making continual improvements in environmental performance and protecting the environment.
- Implementing environmental systems and processes in accordance with ISO 14001to minimise environmental impacts, comply with legal and other obligations and improve environmental outcomes.
- Monitoring and evaluating performance to ensure environmental compliance and obligations are achieved.

We promote open communication by

- Communicating with our employees, clients, suppliers, contractors and community on our environmental performance.

We foster involvement by

- Providing appropriate environmental training to assist in meeting our objectives and reducing any adverse impacts on the environment.
- Promoting sustainable practices within our supply chain and reduce our broader environmental impacts.
- Requiring suppliers and subcontractors to operate in an environmentally responsible manner and adhere to relevant environmental requirements.

Managing Director UGL: _____ **Date:** 27/01/2021

HumeLink West Sustainability Policy

Purpose

This Policy outlines our sustainability management commitments for minimising environmental impacts, optimising social outcomes, fostering economic resilience, and continually improving our practices to contribute positively to the well-being of both current and future generations.

Application

This Policy is applicable to all employees and third parties under the management control of the HumeLink Joint Venture (HLJV), including alliances. It extends across all divisions of the organisation involved in the HumeLink West Project.

To achieve our sustainability management objectives, we will:

- **Integrate Sustainability:** We will establish project systems and processes, underpinned by strong project leadership, to ensure a shared responsibility for enhancing sustainability outcomes.
- **Achieve Certification:** We will seek certification for the HumeLink West project under the Infrastructure Sustainability Council's (ISC) IS Rating tool for Design and As Built.
- **Minimise our Environmental Footprint:** We are committed to minimising the environmental footprint during construction and operations by reducing energy, water, and resource consumption, minimising waste to landfill, and exploring renewable energy options.
- **Preserve Heritage and Environmental Values:** Our approach includes safeguarding and, whenever feasible, enhancing heritage and environmental values through appropriate design, planning, and management controls.
- **Build Expertise:** We will enhance the knowledge, awareness, and skills of our employees, contractors, and impactful suppliers by providing relevant training, information, and resources.
- **Ensure Climate Resilience:** Our commitment extends to delivering infrastructure that is resilient and adaptable to future challenges by assessing and responding to climate change.
- **Engage with the Community:** We will engage regularly and genuinely with communities and stakeholders to minimise project impacts while generating positive community outcomes.
- **Collaborate with Local and Indigenous Suppliers:** We will collaborate with local, regional, and Indigenous suppliers to foster innovative solutions, encourage sustainable practices, and promote the use of sustainable materials.
- **Create Economic Growth:** Our efforts will enhance local and regional economic growth through procurement practices, partnerships, and workforce development initiatives that leave a positive and lasting legacy for our communities and stakeholders.
- **Integrate sustainability in Procurement :** We are committed to integrating social, environmental, and economic aspects into the procurement process.

The HLJV is dedicated to leading, providing strong systems, and allocating resources to achieve outstanding sustainability results for the HumeLink West Project. We will collaborate closely with TransGrid and the HumeLink East delivery partners to optimise sustainability outcomes.

Our Project Director and the Sustainability Manager will ensure the integration of sustainability into the HumeLink West Project. The policy's objectives will be implemented by JV staff, subcontractors, and suppliers.

Appendix D – Environmental Control Maps

HumeLink East	**Environmental Control Map (ECM)** **Project:** HumeLink East **Work Package /Location:** Camps and Compounds	**Revision**: 1 **Date**: XX **Page:** 1 of 7

Document Control and Approval:	XXX	**Prepared by**:	XXX
Revision Number:	1	**Reviewed by:**	XXX
Revision Date:	XXX	**Reason for update:**	XXX

Location and Scope of works covered by this ECM includes:
Enabling works including stockpiling; earthworks; drainage works.

General ECM Notes:

1. This ECM has been prepared to enable field staff to be aware of onsite environmental constraints and to provide guidance on the installation of environmental control measures and controls listed here apply to all subsequent maps.
2. Prior to work commencing, delineate sensitive areas within 50m of proposed construction activities. Fencing is to be in accordance with the Sensitive Area Fencing Protocol. No work is to commence within delineated sensitive areas until clearance has been confirmed and the AGJV Environmental Manager has confirmed that fencing can be removed.
3. Any ground disturbance or clearing require a 'Land Disturbance Permit' prior to works commencing.
4. No entry into a fenced off area without Approval by the Environmental Manager, unless work is related to the constraint that is fenced (e.g. heritage salvage within a heritage site)
5. This ECM is to be used in conjunction with relevant environmental documents ie(Environmental Work Method Statements (EWMS) and Construction Environmental Management Plans (CEMP), Progressive Erosion and Sediment Control Plans (PESCPS).
6. This plan is to be revised progressively as site conditions or construction methods are determined.
7. Controls (including environmental monitors, etc) shown on plans are indicative only. Exact location will be modified to suit site conditions and function provided they are located within the project boundaries. Controls will also be established on an as needs basis, i.e. controls marked on the plan may not be installed until the associated work commences.
8. Unexpected finds must be managed in accordance with the Unexpected Finds Procedure.
9. Site access – biosecurity measures to be implemented at site access as required.
10. Topsoil, unsuitable and other general stockpiles in place for greater than 30 days to be located in areas marked on plan. Minor temporary stockpiles will be established as works progress and are to have appropriate erosion and sediment controls in place.
11. This site is likely to contain snakes, threatened fauna and other protected native fauna which are not marked on this ECM. Report all potential fauna impacts that may (or have) resulted due to construction works. Work is to cease prior to any fauna is impacted – contact the Environment Manager below.
12. Habitat features marked on plan are to be removed only in the presence and under the guidance of the project Ecologists (East Cost Ecology). This will require a two-stage clearing process for habitat trees.
13. Spill kits are located at basins, compounds and within AGJV vehicles. Locations are indicative on the plan. Contain and report all spills immediately.
14. Works to be conducted during normal working hours (0700-1800 Monday to Friday, 0800-1300 Saturday). Permit for Out of Hours Work required for all works outside these hours. Check with the area supervisor for approved out of hours works. Unnecessary noise onsite to be kept to a minimum.
15. Unexpected heritage finds protocol is in place. Stop work in the area and contact the AGJV Environment Manager (who will contact TG Environment Manager and Project Archaeologist) if any suspected aboriginal heritage items are found.
16. Additional requirements outlined in PMP to be implemented.
17. All layouts shown on plan are indicative only. Exact location will be modified to suit site conditions and function provided they are located within clearing limits and EIS limits where appropriate.
18. All site offices, accommodation facilities and any combustible or flammable storage and materials must be located outside the site APZ.
19. Moderate and High Heritage sensitivity layers are subject to further assessment as per the Updated Mitigation Measures. Layers will be updated post this assessment.
20. Refer to Table 5-3 of the EWMP for the definitions of the ecology constraint layers.

General notes relating to Erosion and Sediment Control:

1. All erosion and sediment controls generally to be constructed and maintained in accordance with the 'blue book'.
2. Temporary controls additional to those shown on this plan may be required by the progression of works or weather conditions. PESCPs will be developed to detail environmental erosion and sediment controls for construction stages.
3. Any tracking of sediments to roadways to be controlled by stabilised access/egress points and removed as required.
4. The principal of 'minimal disturbance' to be implemented until topsoil stripping of the catchment is required.
5. Areas that are not disturbed or used (>20 days) are to be stabilised to managed dust. This could include the use of hessian, mulches or stabilisers to cover exposes areas as soon as possible after completion of earthworks where it is not possible to re-vegetate or cover with topsoil. Watercarts to be utilised during active works. All plant and vehicles to utilise existing tracks.
6. Dust controls to be regularly conducted with water carts and soil stockpiles stabilised with temporary cover if required. High dust generating activities to be monitored and ceased during periods of high winds.
7. Construction activities to be modified, reduced or controlled during high or unfavourable wind conditions if they have the potential to increase off-site dust generation.
8. Controls will be inspected prior to, during and post rainfall causing runoff and at a minimum weekly. Maintenance and repairs to be carried out as required.
9. 'Clean water' flow is to be maintained around the site with separation between construction or 'dirty' waters if run-on water catchments are present.
10. 'Dirty water' flow must be diverted to local temporary control measures.
11. Sediment basins and dewatering activities are to be managed in accordance with the Soil and Water Management Plan (SWMP) and relevant Environmental Work Method Statements (EWMS).
12. 'Dirty water' that cannot be directed to sediment basin must be diverted to local temporary control measures (e.g. sediment fences, mulch bunds, turkey nests or sumps).
13. Disturbed areas are to be progressively revegetated with sterile cover crop or permanent revegetation design. Temporary controls are to remain until site is stabilised (70% soil surface cover).
14. Controls shown on plan are indicative only. Exact location will be modified to suit site conditions and function provided they are located within clearing limits and EIS limits where appropriate.

[illegible]

[illegible]

3 Purpose and Scope

[illegible]

[illegible]

[illegible]

UMM	Requirement	Where addressed
[illegible]	[illegible]	[illegible]

4 OOHW Justification

4.1 OOHW subject to this protocol

[illegible]

[illegible]

[illegible]

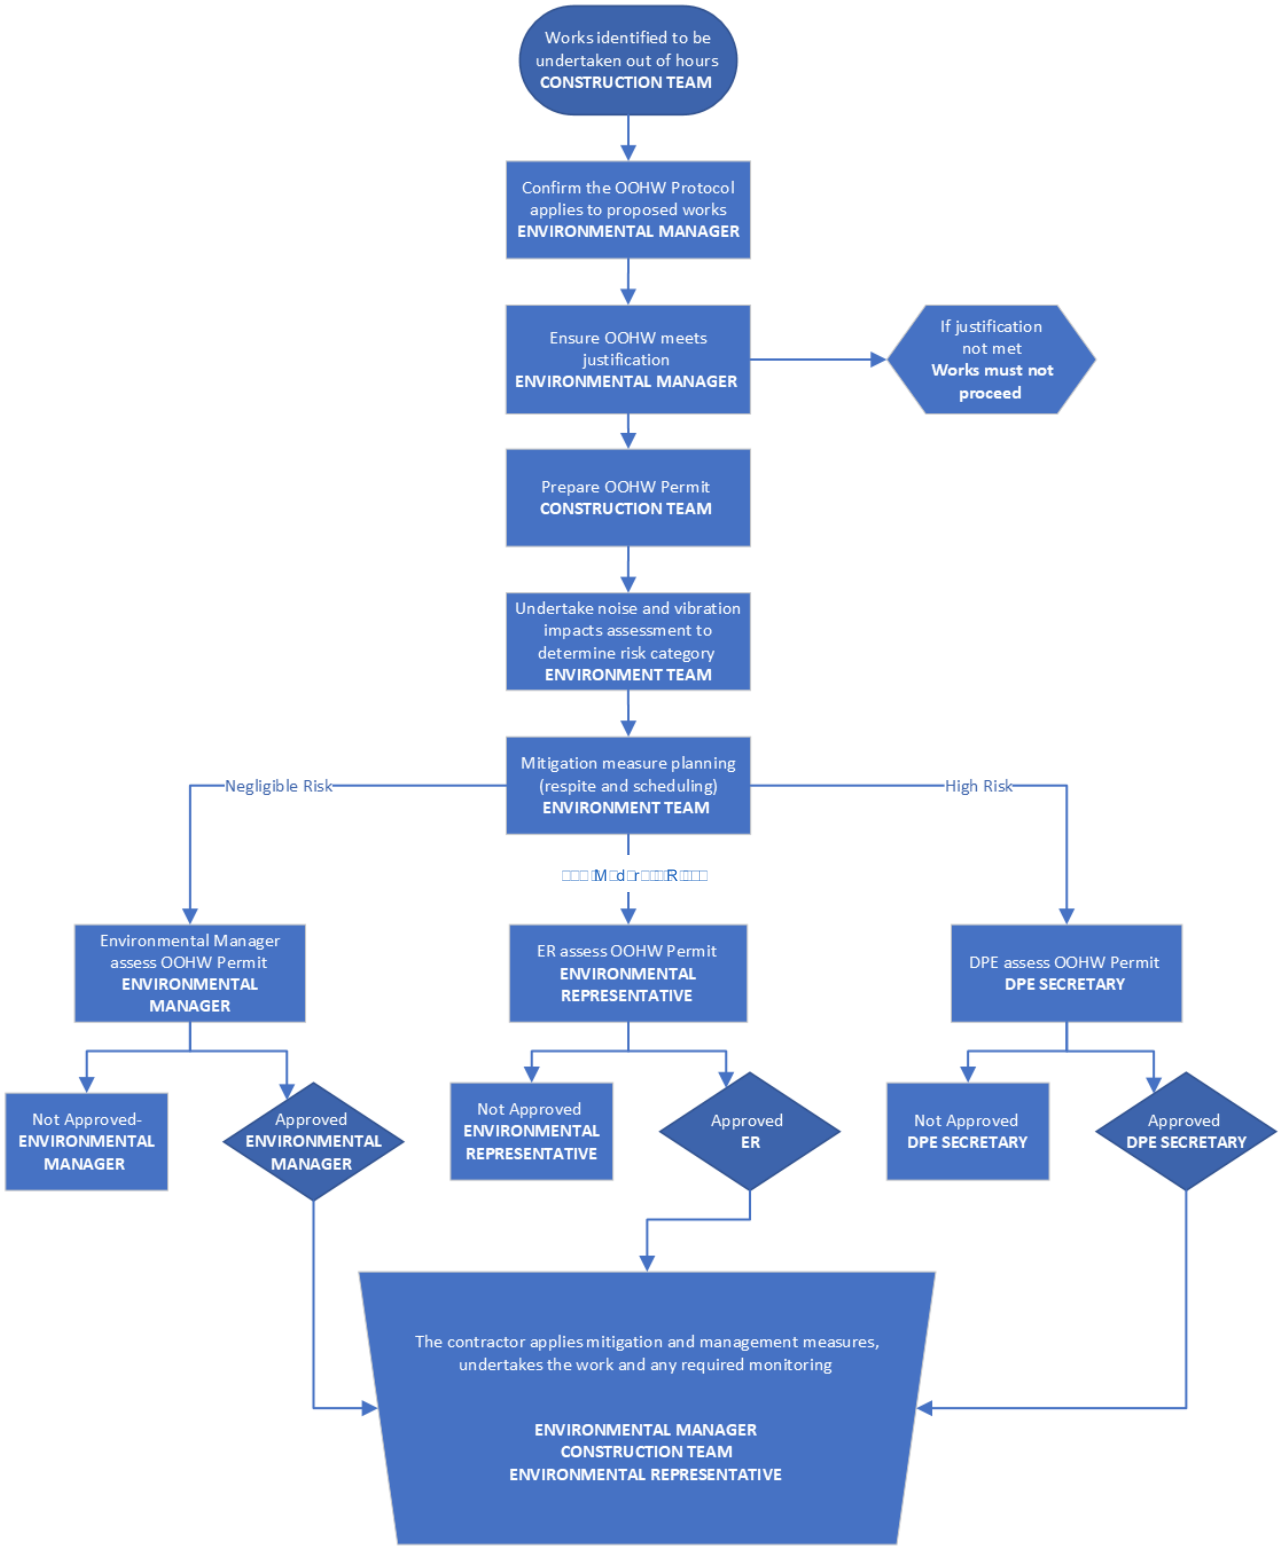
- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]

4.2 OOHW not subject to this protocol

[illegible]

[illegible]

5 OOHW Process



Works identified to be undertaken out of hours
CONSTRUCTION TEAM
Confirm the OOHW Protocol applies to proposed works
ENVIRONMENTAL MANAGER
Ensure OOHW meets justification
ENVIRONMENTAL MANAGER
If justification not met
Works must not proceed
Prepare OOHW Permit
CONSTRUCTION TEAM
Undertake noise and vibration impacts assessment to determine risk category
ENVIRONMENT TEAM
Mitigation measure planning (respite and scheduling)
ENVIRONMENT TEAM
Negligible Risk
High Risk
Environmental Manager assess OOHW Permit
ENVIRONMENTAL MANAGER
ER assess OOHW Permit
ENVIRONMENTAL REPRESENTATIVE
DPE assess OOHW Permit
DPE SECRETARY
Not Approved-
ENVIRONMENTAL MANAGER
Approved
ENVIRONMENTAL MANAGER
Not Approved

6 OOHW Assessment

6.1 Noise assessment

[illegible]

[illegible]

OOHW Period 1: (Evening & Extended Day)

- [illegible]
- [illegible]
- [illegible]

OOHW Period 2: (Night)

- [illegible]
- [illegible]
- [illegible]

[illegible]

[illegible]

[illegible]

6.2 Noise and Vibration criteria

[illegible]

- [illegible]
- [illegible]
- [illegible] 1993 ‘Evaluation and measurement for vibration in buildings Part 2’ as they are ‘applicable to Australian conditions’[illegible]
- [illegible]

[illegible]

[illegible]

- [illegible] Guideline identifies ‘particularly annoying’ activities that require the [illegible]

[illegible]

6.3 Reporting

- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]

6.4 Mitigation

- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]
- [illegible]

Notification: [illegible]

[illegible]

Respite: [illegible]

1. Description of proposed works

Description of the Proposed Works (engineer to complete)	
Action	**Description**
Description of scope and methodology	
Plant and equipment	
Location	
Proposed work commencement and duration	
Working hours	
Planning context	
Checklist number	

2. Potential environmental impact review

Project footprint		
Will works be within the Amendment Report Project footprint?		

Soils		
Any there any acid sulfate soils mapped in the works area?	☐	☐
[illegible]		
Any there any saline soils mapped in the works area?	☐	☐
[illegible]		
Is there any naturally occurring asbestos mapped in the works area?	☐	☐
[illegible]		
Is there any areas of environmental concern in the works area?	☐	☐
[illegible]		

Hydrology and water quality		
Are any works locations within 40m of a watercourse?	☐	☐
[If yes, describe impacts here]		
Are any works locations within the 1% AEP?	☐	☐
[illegible]		
Is there potential for groundwater to be encountered during the works?	☐	☐
[illegible]		

Biodiversity		
Are the works within areas mapped as either 'not assigned', 'low' or 'moderate' as per the constraints mapping?	☐	☐
[illegible]		

Biosecurity		
Are there any known or potential weed and/or biosecurity issues?	☐	☐
[illegible]		

Heritage		
Are any Aboriginal Heritage Information Management System (AHIMS) sites identified within 100 metres of the works?	☐	☐
[illegible]		
Are any heritage sites (including those listed below) within the works area? • [illegible] • [illegible] • [illegible]	☐	☐

Heritage		
Were any heritage sites identified during the Aboriginal cultural heritage pre-clearance (inspection) checks and/or is there potential for heritage sites to be affected by the proposed works?	☐	☐
Is the works area within low, moderate or high area of archaeological potential?	☐	☐

Noise and vibration and visual		
Are there sensitive receivers (e.g. residence, school, hospital) within 100m of the works?	☐	☐
Will any works be undertaken outside of standard working hours (as identified below)? ***Monday to Friday: 7:00am – 6:00pm*** ***Saturdays: 8:00am – 1:00pm*** ***No work on Sundays or Public Holidays***	☐	☐

Traffic and access		
Will any works be undertaken within the road reserve and/or require lane/ road closures and/or cause traffic issues?	☐	☐
Will any works affect access to properties and/or businesses?	☐	☐
Will any works affect parking spaces and/or cause parking issues?	☐	☐

Air quality		
Is any dust and/or other emissions likely to be generated by the works?	☐	☐

Bushfire risk		
Is hot work or fire risk work involved?	☐	☐

Bushfire risk		
Are the work areas located within bushfire prone land?	☐ [illegible]	☐ [illegible]
[illegible]		
Are chemicals, fuels or other hazardous substances required to be transported or stored for the proposed works?	☐ [illegible]	☐ [illegible]
[illegible]		

Waste		
Will any spoil or waste be removed from site or stored?	☐ [illegible]	☐ [illegible]
[illegible]		
Will any potentially hazardous/ contaminated spoil or waste be removed from site?	☐ [illegible]	☐ [illegible]
[illegible]		

Conclusion		
Are there Aboriginal heritage impacts within unsurveyed areas that have not been addressed in the Aboriginal Heritage Cultural Assessment Report (ACHAR) or in an Addendum ACHAR?	☐ [illegible]	☐ [illegible]
[illegible]		
Are there potential impacts to ecology located in areas mapped as either 'No-Go, 'high' or 'very high' as per the biodiversity constraints mapping?	☐ [illegible]	☐ [illegible]
[illegible]		
Given the assessment above, are any potential impacts greater than 'minor' after the application of mitigation measures?	☐ [illegible]	☐ [illegible]
[illegible]		

3. Authorisations and approvals

[illegible]

- [illegible]
- Transgrid's existing legal obligations which apply to the proposed action
- [illegible]

RISK RATING TABLES						
Risk Analysis Risk Classification = Consequence x Likelihood		CONSEQUENCE				
		1 Insignificant Negligible damage to the environment Community complaints with no corrective action Visit from Regulators with verbal comments of OFI	2 Minor Minor damage to the environment, Within site boundaries Minor adverse local public or media attention or complaints Improvement and Infringement Notice	3 Moderate Serious damage to the environment, Medium term effect, Protected species or habitat involved Serious impact on the community, services and property, State media attention Prohibition Notice, fines	4 Major Major damage to the environment, Long term effect, Damage to protected species or habitat Major impact on the community, services and property, National public or media negative attention Prosecution, major fines	5 Catastrophic Permanent environmental damage, Endangered species and habitat destroyed Severe impact on the community, services and property, International scale negative media attention Criminal prosecution, Serious litigation, Major fines
LIKLIHOOD	A Almost Certain The event is expected to occur in most circumstances Occurs more than once a month	High - 11	High - 16	Extreme – 20	Extreme – 23	Extreme - 25
	B Likely The event will probably occur in most circumstances Occurs once every month to 1 year	Moderate - 7	High - 12	High - 17	Extreme – 21	Extreme - 24
	C Possible The event should occur at some time Occurs once every 1 year to 5 years	Low - 4	Moderate - 8	High - 13	Extreme – 18	Extreme - 22
	D Unlikely The event could occur at some time Occurs once every 5 years to 10 years	Low - 2	Low - 5	Moderate - 9	High - 14	Extreme - 19
	E Rare The event may occur only in exceptional circumstances Occurs less than once every 10 years	Low - 1	Low – 3	Moderate - 6	High - 10	High - 15

RISK LEVEL ACTION TABLE	
EXTREME (Unacceptable)	Immediate action required – High level of supervision and monitoring of controls musts be added with senior management responsibility. I.e. Increase inspection monitoring and added to the daily inspection process. A job prestart must be undertaken with all relevant workers, including review of control methods and use of relevant permits to work as applicable.
HIGH (Undesirable)	Site management attention needed with safety, quality and environmental responsibilities communicated and delegated at management level. Take all reasonable steps to eliminate the risk or minimise it by introducing substitution, isolation or engineering controls as soon as possible.
MODERATE (Tolerable)	Site specific supervisory responsibilities must be specified for safety, quality and environmental responsibilities and communicated at site level. Take all reasonable steps to eliminate the risk or minimise it by introducing substitution, isolation or engineering controls as soon as possible. If these options are not immediately practical, implement administrative controls and/or PPE. Implementation of control measures should decrease the risk to as low as reasonably practicable.
LOW (Acceptable)	Manage by routine procedures such as safe work method statements and communication and consultation processes on a regular basis at individuals. Implementation of control measures should decrease the risk to as low as reasonably practicable.

STEP	BASIC STEPS *List the logical steps required to undertake the activity. Include relevant materials and equipment as appropriate*	POTENTIAL HAZARDS *Identify the potential environmental hazards which may arise out of conducting this step. What may cause environmental harm to occur?*	RISK RANKING *Determine the likelihood, consequence and risk category*	HAZARD CONTROLS *Determine the appropriate hazard control(s) are required to address the potential risk identified. What can be done to prevent environmental harm from occurring? Hazard controls should be determined using the 'Hierarchy of Controls' and must not raise or create an increased risk)*	RESIDUAL RISK RANKING *Determine the residual risk category following the implementation of nominated hazard control(s)*	RESPONSIBILITY *Who will ensure that the nominated hazard controls are implemented during the activity?*

				• [illegible] • [illegible] • [illegible] • [illegible]		

General:

- All personnel are to be fully inducted in the site inductions prior to the commencement of any site activities.
- No additional activities are permitted outside the scope of this EWMS without approval from the EM.
- Ensure gates are left as they were found (either closed or open).
- Ensure vehicles are fitted with appropriate silencers and are maintained in an efficient condition.
- Spill kits to be readily available.
- Refuelling to be undertaken in designated refuelling areas.
- All chemicals, fuels or other hazardous substances will be stored in accordance with the supplier's instructions, any relevant legislations or Australian Standards or the applicable guidelines. The capacity of any bunded area will be 130% of the largest chemical volume contained within the bunded area
- All vehicles are to stay within the project corridor and are not to exceed 40 km/h.
- Access to site is to occur along the existing tracks or new tracks identified on the ECM (where approval has been provided by the environmental team). Vehicles are not to cross any waterways which haven't got an existing established crossing point.
- Delineation of sensitive areas in accordance with the Project's Flagging Protocol is to be the first activity to be undertaken on the Project.
- No ground penetration (including staking, installation of control or use of survey jigger) is allowed outside the Project boundary unless approved by the EM.
- No vegetation clearing without the approval of the Environment Manager via a Clearing Permit.
- Vegetation Clearing Procedure (VCP) must be followed while clearing the sites.

Biosecurity:

- Ensure all biosecurity mitigation measures are implemented
- Complete the Plant Clean Down Checklist before entering site.
- Precautions to minimise the spread of weeds are to be adhered to when working in high risk weed areas including:
  - Avoid driving through high risk weed areas where possible.
  - Brushing off excess soil and plant material from boots / clothing / equipment to minimise potential seed spread.
  - Spray / wash boots / equipment with water to remove any mud/soil. Ensure transfer of weed seed to vehicle is minimised by carrying out wash down process prior to entering vehicle.

Pollution: Soil, Water, Air:

- ERSED controls to be installed as per the PESCP as required
- Measures are to be implemented to minimise dust, soil or mud from being deposited from vehicles onto public roads. This will be achieved by implementing mitigation measures such as driving on stabilised areas of the site wherever possible, minimising vehicle movements within the site during and following inclement weather and manual cleaning prior to exiting site to remove accumulated material from vehicles where required.
- In the event of any spillage or tracking, the spilt material will be removed immediately following consideration of pubic and personnel safety risks and the implementation of any required public and personal safety protection measures in the removal of the material from the roadway.
- All waste must be removed from the site and disposed of appropriately including all food/drink containers and spray paint cans.
- Spills are to be contained immediately and used spill kit material/contaminated soil shall be stored in contained areas until disposal.

Noise and Vibration

- Works shall be carried out between 7:00am to 6:00pm Monday to Friday and 8:00am to 1:00pm on Saturday. No activities to be undertaken outside of these hours unless prior approval has been granted by the Environmental Manager.
- Minimise radio noise, yelling, rowdy behaviour, etc at all times.
- All equipment that is not in use shall be switched off.
- Ensure equipment / vehicles are serviced.

Unexpected Finds:

- In the event of an unexpected find (such as dumped asbestos or other unexpected waste/contamination), the area will be delineated, and the Environmental Manager notified. The Unexpected Contaminated Lands Procedure will then be followed.
- If any unexpected heritage items or suspected human skeletal remains are encountered, works potentially affecting the find would cease immediately, the area is to be delineated and the AG JV Environmental Manager and TG Environmental Manager is to be notified. The unexpected Heritage Finds Procedure to be followed.
- If incidental or unanticipated threatened flora and fauna finds are identified, work shall cease in the vicinity of the find, the area is to be delineated and the AG JV Environmental Manager and TG Environmental Manager is to be notified. The unexpected flora and fauna procedure to be followed.

EWMS Change Sheet

STEP	BASIC STEPS *List the logical steps required to undertake the activity. Include relevant materials and equipment as appropriate*	POTENTIAL HAZARDS *Identify the potential environmental hazards which may arise out of conducting this step. What may cause environmental harm to occur?*	RISK RANKING *Determine the likelihood, consequence and risk category*	HAZARD CONTROLS *Determine the appropriate hazard control(s) are required to address the potential risk identified. What can be done to prevent environmental harm from occurring? Hazard controls should be determined using the "Hierarchy of Controls' and must not raise or create an increased risk)*	RESIDUAL RISK RANKING *Determine the residual risk category following the implementation of nominated hazard control(s)*	RESPONSIBILITY *Who will ensure that the nominated hazard controls are implemented during the activity?*
