

Hi Rodger,

I can advise that Essential Energy has electrical assets in Gordon St adjacent to the proposed development. There are no specific issues raised by Essential Energy at this stage with respect to the development. However, once electrical loading requirements are determined by the developer, and their Accredited Service Provider (Level 3) provides precise loading requirements, Essential Energy will be able to determine any issues that may arise from the electrical load connection.

Regards,
Doug Wray
Senior Engineer – Distribution Planning
