Hi Kevin

can you please review data sheet for the external wall PIR panel wall (as nominated by Askin the supplier) , to confirm following

- Compliance with NCC requirements
- consistency with FER

I understand that the product is considered to be combustible. Note also this building is in a Bal 12.5 bushfire zone.

Please contact me if further information is needed to assess this.

regards
Doug

Good Evening Doug,

Thanks for the chat this afternoon. As discussed Type C constructed buildings such as the bunnings Leppington project is not considered as requiring to comply with the requirements of BCA Clause C1.9 & C1.14 and as such can be constructed utilising a combustible external wall.

Please note however we have as a curtesy informed FRNSW of the use of this material in the recently updated FEBQ.

Kevin,

Can you confirm that this was in fact included per our discussions and you have no issues with the proposed materials from your side?

Kind regards,

Joshua Hawke

Evening,

Agree what Josh has said in terms of the compliance aspect.

I've checked the updated FEBQ and I didn't tick the box for Insulated sandwich panels.

I'll fix it and re-issue it now, my apologies.

Regards,

11/03/2021
