Redfern, NSW, 2016

Attn: Marvin Huang

**Re: Tallawong Station Precinct – Electrical infrastructure & power supply**

Dear Marvin,

DEP Consulting have been engaged as the Level 3 Accredited Service Provider to undertake the design of the electrical infrastructure & power supply for the overall Tallawong Station Precinct.

DEP Consulting has assessed the proposal for the site and has determined that several new Padmount Substations will be required to service the entire development. The Substations will be positioned wholly within the development and will be designed to be installed to meet the staging requirements of the development. The Substations, the associated High & Low Voltage network extensions and public roadway streetlighting will be designed to comply with Endeavour Energy construction requirements.

In accordance with Ausgrid's requirements, the Electricity Supply Act 1995 & the State Environmental Planning Policy (Infrastructure) 2007, consultation with Council, other Authorities & the surrounding land occupiers will be carried out prior to finalising the design & commencing works onsite.

Yours Sincerely,

**Charles Rheinberger**  
Director, DEP Consulting
